1. FS: Multi-Elmac PMR6A Rec and A-54 Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-01 00:00:00 UTC
From: w5kft@nts-online.net
Message-ID: <5ad1e2$jqs@news.nts-online.net>
Source record: 124092

I have two Multi-elmac PMR-6A receivers, each has a homebrew
power supply with it. I got these a long time ago for a project that
has long since passed and they have been sitting in the garage since
then. I will take $45 for each receiver and power supply combo, or if

you want both sets I will take $75 plus UPS.

I also have a VERY rough Multi-Elmac A-54 transmitter that I will
take $15 plus UPS. Let me know via return email if you are
interested.

Bryan w5KFT

2. FS: I have a large selection of Tubes and Manuals!!

What is a "Boatanchor"? I marvel at how many explanations could be posted about this topic.

A "Boatanchor" in radio terms is one of those great big back breaking radios (rcvr or xmtr) that have so much personality that you just refuse to notice the weight of it. The thrill of operating one of these "Gems" is really self perpetuating. This is especially true for those of us who operated these radios when our maturity had not arrived yet. We had no idea that we were participating in a thrill that would come back like second and third "waves" of exhileration. The new gear is nice, reliable

practical, advanced, expensive, BUT NOT FUN! After all this is why most of us mess with this stuff isn't it??

I would love to hear other opinions on this one.

21. F.S IF Filters Heat & Collins

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-01 00:00:00 UTC
From: scotgray@cwnet.COM
Message-ID: <32CADFC1.61B8@cwnet.com>
Source record: 124112

Have a couple of IF filters hanging out in the garage. Don't need them.
Too many future projects..

First up: Heath 3.395 SSB IF Filter BW:2.3 Kc @6dB, 4.0Kc @60db. Made by
Filtech Corporation P/N 404-283, Model 2033. Nice "SB" or "HW"
replacement, or cascacade with existing filter for better skirts.

Second: Collins Rockwell 526-9939-010. Measured center 453.3 Kc.
Measured BW: 2.3 Kc @6dB, 4.4 Kc at 60dB. Plastic case, plug-in type.
Not on the WA3KEY filter index, but spoke to some people at Rockwell
several years ago. Numbers are close or same as I recall.

Both Filters checked on a IFR1200S spectrum analyser w/ tracking
generator. Input and output impedance is 50 ohms on the test equipment
so the overall BW numbers should improve as the filter impedances are
much higher and performance will improve into a proper match.

Best offer.

Will consider trades for ?. Looking for a decent tube checker (would go
cash difference for a TV7).

Still on the lookout for 2 HQ-150 or 160 Black main tunning knobs in
Very good condx.

Thanks & 73

|>Thanks and 73,
|>Mike, KK6GM

Here is the scoop on the FT-241 rocks.
This is from the CQ Surplus Conversion Handbook Page 97. It looks like they
lifted the print from somewhere else.

For units marked for channels 0 thru 79 (20-27.9 MHz):
Fcrystal = Fmarked/54
for example Channel 0 or 20 MHz is on 370.370 KHz
Channel 20 or 22 MHz is on 407.407 KHz
Channel 46 or 24.6 MHz is on 455.555 KHz
Channel 79 or 27.9 MHz is on 516.666 KHz
For units marked for channels 270 through 389 (27-38.9 MHz):
Fcrystal = Fmarked/72
for example Channel 27 is on 375 KHz
Channel 328 is on 455.555 KHz
Channel 389 is on 540.288 KHz

These were popular for building homebrew SSB/CW filters. I have used them as
single xtal filters in simple HB receivers.

I have a box of these FT-241 crystals if anyone needs some, let me know!

30. ANNOUNCE: WABC 77 transmitter photo tour page

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-02 00:00:00 UTC
From: Jim Hawkins <jimh@exit109.com>
Message-ID: <32CB99BB.3399@exit109.com>
Source record: 124116

Hi radio buffs!

I have a created a new photo tour page of WABC, NY transmitter site at:

http://www.exit109.com/~jimh/wabc.shtml

called "Jim's WABC Transmitter Page"

At this time all photos of WABC were taken on August 12, 1966. This page glows in the dark, you may have to wear lead glasses <g>! All photos can be clicked to download 640X480 images for your own personal collection.
They may not be re-used in any public manner (see my FAQ page).

Also, please visit:

http://www.exit109.com/~jimh/radiob.html

I have added a total of 22 new photos!

For those who have never visited my radio pages, the main page is called "Jim's Radio Room" at:

http://www.exit109.com/~jimh/radio.shtml

where you can access all pages of photo tours for Voice of America, Radio Canada International, WABC, a virtual 3D tour through an imaginary transmitter site and other pages.

There are also links at the bottom for other radio sites and transmitter manufacturers.

Hello Gang and Happy New Year...
I was wondering if one of you "old timers" wanted to part with and old key.
I was going to replace my worn out NYE Viking cheapo and
couldnt get myself to throw it out because of all the memories in those
qso's. So,if someone has a used up key or bug they want to see get a new
home,
and be used often,please let me know.

32. Testing RCA 832's - help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-02 00:00:00 UTC
From: caschwark@aol.com
Message-ID: <19970102014100.UAA28778@ladder01.news.aol.com>
Source record: 124118

Anyone successfully tested 832's? I have the pinout and specs from the ARRL handbook, but would like to see if the two tubes I got in a trade are any good. Filaments are ok, but cannot tell much more unless I do a Gm test, etc. They appear to be new-out-of-box or very slightly used. The pins are dark-ish but show no scrape marks from sockets. I have two Hikock testers - a 600A and a Philco 9200 (aka Hikock 533). Any help appreciated.

HNY and 73's,

17kc is a long way...
1. be sure the 6au6 (I think) is ok. Put a different one in the PTO
2. the capacitors inside the PTO are very special temperature
compensating capacitors. (ask questions about drift if those are bad) or
maybe someone has already changed them. They are wafer looking (flat)
3. the B+ to the PTO should be monitored for drift

It sounds like someone has screwed with the PTO. I suspect the only
answer is to try to find another one and replace the whole little box.

Tonight I picked up a nice new receiver... A Racal RA17C..... Nice shape...

The seller through in a "bonus".... Its military and I don't know, or collect too much military...

Its a funny little box and the plate says..

R-77-B/ARC-3
D423
Sylvania Electric Products Inc.
Buffalo, NY

There is another tag that says

Modified per
Shuttig and Co.
Kit # S215A
LAC 616134

It appears to be a vhf receiver. There is a funny little dial on the bottom right that has graduations from 100-155.... Is thiis MHZ???

At the top left, there is a much larger vernier type dial...

My guess is some form of aircraft, but I am sure this is quite common and lots of you can tell me what it is.

Thanks...

By the way there are two connectors on it. One appears to be a regular SO-239 and ther other is similar but has two holes in the centre. What's the purpose???

Thanks

Ok,

I disagree that NEW equipment is not fun. I just received the "NEW"
Grundig 960 Classic AM/FM/SW tabletop receiver for Christmas and it's
FUN!

Basically, Grundig is reintroducing this radio to celebrate it's 50th
anniversary and I was tickled to death to get one. It is a relatively
accurate replica of the 1950's original (without the dreaded cassette
player on the side), with enhancements like: all solid state (of course),
stereo (instead of mono) and RCA jacks in back (to hook up the dreaded
cassette player or CD player). The unit has real grill cloth and even a
cardboard back. Only problem is that it doesn't glow in the dark (except
for the dial display) and have that familiar smell when it's warm.

Upon setting up the new radio, I promptly plugged in my CD player and
proceeded to play my collection of Glenn Miller CD's for my father-in-law
(who WAS "Over There"). Oh, did I mention that it also lives up to
Grundig's reputation for excellent FM sensitivity?

This radio was, obviously, made for us lovers of old stuff (even if I AM
a late "Baby Boomer".

For $249, it wasn't as cheap as Wal-Mart's imitation radios but was still
a deal for Grundig quality.

46. WTD: Kalotron 2AS15A Vacuum tube???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-02 00:00:00 UTC
From: mgkepner@facstaff.wisc.edu
Message-ID: <5ahh4b$2ces@news.doit.wisc.edu>
Source record: 124132

I have what appears to be an octal bakelite based vacuum tube that is marked Kalotron [in a large horizontal diamond], 2AS15A, Thermosen, Inc., Stamford, Conn., made in U.S.A.

Inside the glass envelope all the elements seem to be tied together, but it looks like some of them might have been able to pull apart at one time. There is a hair-fine wire that passes through a 1/8" dia x 1/2" long tube that looks like it might be used to pull a contact wire away from another wire.

Right now the tube has continuity between pins 3-4 and 2-5. I'm guessing that the hair-fine wire is actually broken in a place I can't see and that has let the contact close when it shouldn't (wire cold). I can't follow the leads from the inside to the octal base.

This tube just came to me with a bunch of other industrial tubes of various backgrounds and I was just wondering what it was, when they were used, and for what purpose. I had never seen anything like it before.

I looked up 2AS15A in a Richardson Electronics price list from a few years back and found a price well over $100. This seemed extreme for such a simple device, but maybe I just really don't understand what I'm looking at. Any clairifications gratefully accepted.

48. Viking II Factory Mod Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-02 00:00:00 UTC
From: zut@cais.com
Message-ID: <Pine.BSI.3.93.970102213951.7181C-100000@cais2.cais.com>
Source record: 124134

During Straight Key Night, I discovered that some previous owner has modified the keying circuit in my Viking II and the 122 VFO, rendering it incapable of being properly keyed on CW. Unfortunately, they also didn't note what was done in the documentation.

When I went in to trace the wiring to track down what's wrong and put the keying circuit back the way it's supposed to be, I found that there was apparently also a factory modification that included a small chassis on the oscillator shield with a potentiometer and a 12AU7. Does anybody have documentation and/or information on this? Apparently there were enough changes made to install this mod that the original schematic is now not reliable for troubleshooting problems. HELP!!

Thanks & 73,
Tony Stalls, K4KYO

Need help identifying an old BA I've had for a number of
years. Appears to be a CW is radio/telephone transceiver
of WWII vintage, possibly Lend-Lease stuff, because it has
labeling which is in Russian (Cyrillic) and English for many
function switches es knobs. One meter on the face panel - for
"volts" (in English).

Manufacturer's tag at bottom of face plate reads all in English:

(1st line) - Signal Corps
(2nd line) - Wireless Sets No. 19 MK II
(3rd line) - (too small to read in dark shack here)
(4th line) - CZR 12440 - Phila - 44

Any guesses?

Need a vintage bug to match that rig you just restored and put on the
air?
In addition to a few boatanchors, I collect Vibroplexes and other bugs.
In the process of acquiring bugs for my collection, I wind up with
duplicates, so I have the following bugs for sale, all in good working
order:

Original #97240: 1926, black Japanned base, fair. $75
Original #116878: 1941, black crackle, very good. $75
Lightning Bug #143073: 1945, black crackle, good/vg. $85
Champion #161321: 1948, black crackle, excellent. $75
Champion #193324: 1953, gray crackle, good/very good. $70
Presentation #206394: 1959, excellent, a few scratches on
gold-plated top, with case. $135
Presentation #231208: 1963. Gold-plated top worn,
otherwise excellent. $110
Lightning Bug #259369: 1969, gray crackle, excellent. $110
Lionel J-36: WW2, no nameplate, vg/excellent. $85

If youï¿½re interested in any of these please send me a note and Iï¿½ll send
you the complete list with a better description of each. Prices are
firm,
shipping is not included. Satisfaction is guaranteed ï¿½ return within
two weeks for a refund if youï¿½re not happy.

73,
Randy Cole

55. help with Hallicrafters SX-122

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-03 00:00:00 UTC
From: Phil Nelson <philn@accessone.com>
Message-ID: <01bbf946$e122c5c0$5445facc@philn3>
Source record: 124043

Hi, maybe there's a kind soul who can help me diagnose
this receiver's problem. It seems to have audio gain (hiss through
a speaker or phones, crackle/pop when you touch a probe to
the right spots). It doesn't seem to detect any RF signal. The
meter doesn't budge on any band, and you can't hear any
signal whatsoever.

When I got the set, all the tube voltages measured low against
the manufacturer's data sheet, so I replaced the 3-element can
capacitor. Voila, good reception on broadcast AM band. Meter
responding to signal, plenty of volume, everything looks
promising -- it's late, so I call it a night.

Next day, back to square one. Exactly the same symptoms
as before. I've substituted known-good tubes all around, and
cleaned all the switches with tuner cleaner. There are a few
tubular electrolytic capacitors in this set. I've tried clipping
caps of same/higher values across the leads of a couple of
obvious suspects, again with no results. Testing of other
components, like the RF Gain potentiometer, hasn't led
anywhere, either. Tonight I tested the voltages on the 5Y3GT
rectifier and 0A2 voltage regulator, which again look OK.

Any brainstorms on where to go next? In my limited repair
experience, I haven't had this experience of a set coming
back to life, then croaking again. I have an old EICO signal
generator sitting around, if that would be useful in diagnosing.
I believe it works (at least, it makes nice patterns when hooked
up to my flea market oscilloscope), although I've never tried
using it for anything serious and don't have an instruction manual.

Thx for any advice you can provide.

Phil

I've recently inherited a radio, and was curious as to it's value, or worth. Personally, I don't collect old radios and have little need for it...

Excellent condition - no dents, paint is still good...it's grey, about 3 1/2"w x 5"d x 6 1/2"h.

Says: Signal Corps - U.S. Army
Radio Receiver BC-1023-A
Order No. 7912-WF-43 Serial No. 12482
Majestic Radio and Television Corp.

If anyone can help me identify this radio it would be appreciated - also, if your interested in buying it, let me know too.

Thanks, E-mail only please?

John

Don:
This is the receiver section of the AN/ARC-3 VHF aircraft radio.
It was introduced in late WW-II as a replacement for the
SCR-522 and was used to communicate both plane-to-plane and
plane-to-ground. They were first extensively used in the
P-51 Mustang and the P-39 Bell Cobra, where they mounted in
brackets behind the pilot's headrest.
Later, they found their way into many aircraft and were found
in older planes right up to Vietnam.

The complete set includes a transmitter, control box and
a two-dynamotor power supply-modulator. The unit uses
crystal control in 8 channels. Both receiver and transmitter
use internal motors to do tuning and channel switching.
The small dial at the lower right shows the frequency to which
the receiver is tuned. The thumbwheels under the crystal
sockets pre-set the receiver to tune the proper freq.

They are still fairly common and inexpensive,
and that's good for such an historically important
military radio. I have a complete set and it is part
of my summer projects to get it on the air, where it will
talk to my working ARC-1, ARC-type 12
and ARC-5 VHF...(brag brag).

>By the way there are two connectors on it. One appears to be a
>regular SO-239 and ther other is similar but has two holes in the
>centre. What's the purpose???

This is a rare modification for use with DF and ECM equipment.
This makes the unit far more interesting then the garden-varity.
It perhaps came from an intel aircraft. If you ever wish to
part with it, remember me.

I have a McMurdo Silver VHF transmitter and receiver that I
would date from the late 1940s. The receiver package is a
superreg design, the transmitter uses an 832 in the PA and requires
an external ps that I am missing.

Does anyone know anything about these relics, and what the
current market value is?

64. Johnson "Adventurer" Chirp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-03 00:00:00 UTC
From: alancohn@onr.com
Message-ID: <852327789.21832@dejanews.com>
Source record: 124052

Recently, I revived a Johnson "Adventurer" with a blown power transformer. My junque box had a transformer that seemed a little beefier than the original. After I installed it and new filter caps, the transmitter came back from the grave. It made just under 20 watts on 80 and 40 meters. So far, so good.

When I key the rig, I get a very nice chirp. It's really very quaint and nostalgic, but I'm not sure if that was characteristic of this unit. During my novice career (circa 1969), I remember lots of chirp signals. I always gave them 599 reports, because that was the only report I knew how to give.

Several different crystals worked exactly the same. 40 meters was the only band I tried, although, I doubt that the picture got better on higher frequencies. With the new transformer, B+ is about 520 V key up, and 485 V key down. That may be the source of the chirp, but I'm not sure.

In any case, it would be great to hear about the "Adventurer" adventures of others!

Message-ID: <32CD8111.1794@worldnet.att.net>
Source record: 124054

I have the above radio to sell...I have no idea what it is worth, and am looking for opinions...

Radio is in EXCELLENT condition. A couple minor (not deep) scratches. It looks great. Face is clean, and meters and dials are bright white - probably owned by a non-smoker. Inside is very clean - no rust, and it appears to work fine.

It appears this radio has been gone over by someone who knows what they were doing. I inherited it from an estate, and frankly, don't know that much about older equipment.

Any information (as to value) is appreciated - and If you're interested, in purchasing it, please get in touch via E-mail. This unit should make a great addition to someones collection.

Thanks.

John

>
> Any guesses?

This is a HF/UHF transceiver that was built during WW2 and was used by most British/Canadian and Russian mobile divisions. They were used mostly in tanks and there is quite a following of these radios in Canada. There is a CW net on 40 metres once a month but the time and freq escapes me.
There were three marks of this type and were used in various areas up until the early 1960's. The Canadian Military Communication Museum in Kingston Ontario has several complete 19 Set stations including the 300 watt amplifier that was used as a HQ station. One of the displays is so completes that is has never been powered up at all.
I used one for several years when I first got my ham ticket in '62.

76. Re: Pro & Cons on Cordless Telephone Headsets????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-03 00:00:00 UTC
From: Rich Wall <richwall@asan.com>
Message-ID: <32CDDF62.7CC9@asan.com>
Source record: 124064
Cross-posted to: rec.radio,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

The pros are the obvious freedom of a cordless headset.

The cons are great, in my opinion.

1)You can be listened to by other cordless phones, scanners, baby monitors and other devices. This results in no privacy.

2) If you live in an appartment or densely populated community, you can hear other handsets or headsets using the same frequency or channel you are on.

3) The batteries in the cordless unit can die with little or no notice. Nicad batteries have a fast "drop-off" and the time spent off the charger is limited.

4) In some cases other handsets or headsets can capture your base unit's dial tone and dial out on your line. This problem has been resolved with the newer models using security codes.

These problems become more evident in apartment dwellings where the chances of other having a cordless close to yours is strong.

I hope this helps you with your concerns.

Rich

Nice HVPS foundation for 1500 or 2250 VDC 600 watt CCS power supply:

general specs:

115/220 primary 60 hz
Secondary 1750 at 270MA (no ct) rated for Cap input CCS
Dual 5ufd/3kv oil cap with tall porcelain busings
Bridge rectifier assembly
8 hy at 300 ma choke (2500 WV)
Bleeder resistor/shunt 300VDC high current zeners for Screen loads
Packaged in aluminum frame and fairly compact.
In standard configuration will handle a pair of 4CX350As at a KW ssb
Or with choke input the unit will handle a quartet of 811As at 1500
volts at
full KW ssb or CW ICAS

Estimate shipping weight at around 35 lbs from zip 95827 cfm ups at
http://www.ups.com

Magnetics are open frame with conformal sealant coating (mil spec)

$100 plus UPS as noted.

Thanks for the read

Bob, KE6F

I have one, 1904 construction, with wood carry box.
fyi this is called "the first bug" and used electro
magnets, not springs. i would like to swap it for
what i really like , which is some piece of radio
equipment from ww2 german or japanese forces.
yes, this is a 'moon shot'. no go, i might
sell it this summer, but the outrageous ripoff price
will be abt $1500, which is what i have already been
offered. actually, i have a ww1 german spark
xmtr, also trade fodder for same kinda deal. works,
just the thing for low band field day operation.

Wireless set no. 19 mk 2 was (as I understand it) made during wwii for lend lease to russia for use as tank radios. Some also ended up with the british. Some of the labeling may be in cerillic (sp?) russian language. None were intended for use by US troops. For many years they were considered true boatanchors -- jokes, really because of their crudeness == both in design and lack of quality construction. There are any number of articles on these in back issues of CQ and 73 from the 60's and 70's. Most articles are on converting them to hf cw use.

zut@cais.com wrote:

Hi Tony,
Sounds like the original Johnson grid-block keying mod.
It uses the 12AU7 as the keyer tube to control bias to the VFO
oscillator tube and succeeding stages of the rig to provide sequenced
keying. It's a good mod and except for slight changes in some resistor
values, from what I remember, is identical to the circuit used in
later rangers and the valiant. The pot is adjusted by monitoring the
VFO with the rcvr. With the key up, adjust the pot slightly past the
point where the vfo stops oscillating and you should be in business.
If you have further problems, I have somewhere a hand drawn
schematic I made years ago. It's a simple circuit and worth fixing.
Maybe someone has the original Johnson paperwork for this mod.
If not let me know and I can dig up what I have.
Good luck, Greg K3EWZ robjohn@chesco.com

I'm restoring a Heathkit Cheyenne MT-1 and building a power supply for it, and I found that it would be really nice to have the original manual and assembly instructions for it. A xerox copy would be fine. Mail moo@midtown.net.

110. VIKING II INFORMATION NEEDED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-04 00:00:00 UTC
From: zut@cais.com
Message-ID: <Pine.BSI.3.93.970104012036.361A-100000@cais2.cais.com>
Source record: 124073

I'm in a sort-of desperate situation. My Viking II all apart on my desk for two days (this was supposed to be a quick repair) trying to fix a problem keying the VFO on CW. This should be simple because normally the keys the VFO via pin #8 of the VFO power socket. However, there's an undocumented factory modification that was apparently put in incorrectly. It consists of a small chassis mounted on the shield right over the crystal sockets with a 12AU7 and a potentiometer. The cable from it passed through a grommet to the underside of the chassis.

If anyone has any information on this Viking II mod, I would appreciate hearing from you, or if you know someone who's familiar enough with them to give me an idea, I'd appreciate the lead.

The choice is put the Viking II back together not working or removing the modification and restoring the original circuitry. In any event, I need to do do something today. (Saturday, 1/4/97)

Thanks & 73,
Tony Stalls, K4KYO

Mike,

There was a crystal set that came with the BC-696 in a little two-decked CS-137 case that were FT-243 holders. They were in 25 KHz steps. I don't recall the formula for determining the frequency, but the ones I have and use are:

Channel 323 (32.3 MHz) 7000
Channel 324 (32.4 MHs) 7025
Channel 325 (32.5 MHz) 7050

And so on...

73,
Tony Stalls, K4KYO

hello from Jim in Atlanta. All previous points correct,I've got some
experience with those too. I have found that the 900 mhz that use
spreadspectrum encryption work real well. You can be on hf running a k
with no rfi. The range is great,has the same charecteristics as our band
close by. Can be monitored,but they have to work for it! In my opinion
worth the expense. Good Luck KD4CDB

From: David Little <dalite01@sprynet.com>
Message-ID: <01bbfa29$8c4a3fe0$0ca4aec7@node2>
Source record: 124082

I need to get a schematic for this reveiver. My main
concern is the power supply requirements, as the
rig had a homebrew supply which is now deceased.
It was based around an Xformer marked FAIR 818
If anyone has info on the secondaries of this
transformer, it would be a big help.

Thanks

From: radiomatt@aol.com
Message-ID: <19970104114300.GAA15691@ladder01.news.aol.com>
Source record: 124083

Just got my copy of Fred Osterman's SW RECEIVERS-PAST & PRESENT, 2nd edition. Great book. Glossy paper(for clear photos), 350 pages. cover 70+ manufacturers and 500 models. Each listed model has a PHOTO and specs.
Want to see Eddystones? Nationals? Racals? Redifons? Debegs?
All are shown in depth, with info on variations
Fred's previous edition looked like it was mimeographed; this is on a par with Chuck Dachis' Hallicrafters book..that is, a fully pro publication.
Nice thing, it covers from about 1945 to the present...mostly tabletop and rackmount communications grade radios...a few portables (no ZENITHS, though).
I'm impressed (also not totally unbiased, I provided some info on rare receivers).
Universal Radio Publishing is at 800 431 3939. I think it's $20, but no price shown

Tony;

I seem to recall this modification is a grid-block keying mod? I'm not real sure because I've never owned one, but there was a recent thread about it on the Boatanchors Mailing List. I believe it is a very desireable modification and you should probably think seriously before removing it. Perhaps someone else will reply who has a better knowledge. If not and you can hold out a little longer, respond to me and I will post your question on the other private list. The depth of technical discussions there, in my opinion, far exceeds what has been seen in the newsgroup to date, and I know you would get an answer from one of the 650 BAers who frequent that list.

Let me know & GUD LUK

> Order No. 7912-WF-43 Serial No. 12482
> Majestic Radio and Television Corp.
>
>If anyone can help me identify this radio???

The BC-1023 is a Marker Beacon receiver used in larger aircraft
during WW-II. A B-17 would carry 1-4 of them. When the marker
for which it had been set was encountered, a relay within the unit
would illuminate a small light on the lower left of the B-17
pilot's instrument panel. The unit is tuned in the 75 Mhz region
and set each time before a mission. It has no audio or IF stages.
The design includes a very simple TRF front end, detector and
relay-control driver.

They are of no value for "ham" communications. However, it is
an historically valuable artifact from that era. I suggest
donating it to the nearest branch of the Confederate Air Force
and taking a $40 charitable tax write-off. You get a small
break and you also save a little history from the dumpster.
If you don't want to be troubled with all this, I'll
pay shipping to me and I'll donate it to the CAF wing here
in Las Vegas.

REAL boatanchors are things that smoke and puff and smell a teensy-weensy bit like burnt toast (because of the tubes). It is even better if they are or have been or could be used in sin (for example the ART-13 transmitter from a B-17 we cheated on as kids !)

(Though some purists would say that boatanchors are all civilian jobs...)

... for posting your "heads up" regarding the batch (well, three) of R-390A's at Electronic Dimensions in Tacoma. I am now the proud owner of Serial Number 720, manufactured by Capehart Corp. under order 21582-PC-61.

I assume the "61" denotes the year of the order. By the time I got there (this afternoon, just before closing) there were two left. The other one was made by Collins in 1955 (if I'm decoding the last two digits of the order number right). There was a $75 bonus for the "Collins" name; since I'm cheap I bought the other one (which also is in slightly better shape).

FWIW, I paid $270 including tax. Untested and a little dusty, but came complete with meters and ballast tube.

From: toneri@ils.net
Message-ID: <32ceeed2.29934@Pubnews.demon.co.uk>
Source record: 123968

Thanks for reading this message. I have an unusual problem with a Viking Valiant 2. On 80 metres I can not get much grid drive on CW or Phone (1/2 ma.) no matter where I set the drive control. If I switch the XTAL/VFO switch to the ZERO position, the grid drive comes up to normal level. The problem only occurs on 80 metres and the oscillator and buffer meter readings are normal.
I have checked all voltages and they are within limits and I have re-soldered all the connections on the bandswitch, 5763 socket, XTAL/VFO switch and a bunch of others in the same area thinking that it may be a cold solder joint. Once in a while after the rig has been on for a couple of hours, the problem goes away.
I am now thinking it may be a heat (or lack of heat) problem on one of the components.
Any help would be appreciated.
Thanks...Mike VE3FGU

I wish to sell or trade my National NCX-5 transceiver, circa 1965. This rig covers 80, 40, 20, 15, and 10 Meters, SSB/AM/CW, with over 100 watts out on all bands. The radio is in very good condition, with the original "National Blue" paint scheme. The matching speaker/power supply is included, and the filter caps in the supply were recently replaced. This set is the "Mark II" version with the solid-state modulator (instead of the expensive 7360).

I have a new, complete reprint manual from W7FG Manuals and a Turner hand microphone to go with the rig.

I would like to swap for Drake gear (TR-3, TR-4, 2-B/2-BQ, etc.) or I will sell the National outright if no swap offers are tendered.

Thanks for reading my post.

73,

Tony N8SNC

I heard that Heath is still in business, and they sell kits for
educational use and to companies. I don't know if this is true.

I don't know where it is, but I think I have a 1990 Heathkit catalog-one
of the last-and it has a full range of kits. In early 1989 my junior high
meterology class built a Heathkit weather station.

They were supposed to be 6146's rated for pulse service. We used them
years ago to sub for 6146's, and THOUGHT we eeked a little more peak
power from them. I thought it was true, but lacked new 6146's to compare
against in a fair test. They plug right into 6146 circuits, and after verifying
neutralization and adjusting bias for proper cathode current (which should
be done when changing ANY final tubes, anyway), they worked great!
I saw specs a long time ago, and they were not for the type operation we
put them to, so didn't mean a lot.

I'm sittin' here lookin' at one that I got new-in-the-box a few years ago, same order number, S/N 5271. I'm puzzled by your comment about paint... this one is bare aluminum, though the front panel appears to have been etched and the nameplate and other labels produced directly on it.

Mine has the shockmount base FT-101 with it.

As to what it is... it's a marker beacon receiver for aircraft use. Receives a signal on 75 MHz, lights up a lamp in the cockpit to tell the pilot he's passing the outer marker on an instrument approach. This particular one works on 14 volts; I believe the one for 28 volts is the BC-1033. Should be a schematic inside the case.

Today, there are three marker beacon signals in use, still on 75 MHz. Three different AM modulation freqs are used to distinguish outer, middle, and inner markers- I think 400 Hz, 1200 Hz and 3000 Hz, but I'm not sure of those. This little guy would respond to all of those, I think.

Value is not great, AFAIK. Maybe five or ten bucks, if it's in really good condition and has the mounting base. Too bad- pretty soon there aren't gonna be any left and they'll be worth a bunch, and maybe to the right person it'd be worth more... but that's what I've seen recently at hamfests, and warbird aircraft restorers are not paying much attention to period radio installations.... so whaddaya gonna do? (sigh)

If you don't find anyone interested, let me know. I might buy it to give
to the Antique Airplane Association's museum in Blakesburg, IA.

When I went to work for Raytheon in 1963, the Sparrow missle used subminature tubes with wire leads, mounted in spring clips. The wire leads were hand-soldered to the circuit board. A few years later, the Sparrow missle was converted to use transistors. It was rather difficult to design transistor circuits that would operate at the required temperatures. However, the old subminiture tubes had no such problems. At one point, Joe Reisert, the chief engineer said that if we had been using transistors all along, and some salesman came in and demonstrated a new high-temperature environment amplifying device called the subminature electron tube, it would have been hailed as a technological breakthrough.

Maintenance manual = TM 11-5820-358-35, there are also 4 other manuals
in the set which include operation and installation but I would have to
look up which is which. The numbers are: TM 11-5820-358-10
TM 11-5820-358-20
TM 11-5820-358-20P
TM 11-5820-358-35P
Good luck with your receiver, it is the Rolls Royce of vacuum tube
receivers. I use mine every day on CW with a external Product Detector.
The manuals are available from the Gov. There is a website, I have the
URL somewhere. Dan

Gary,

You have a military transceiver built by the U.S. in WWII for Russian tanks.
If you take it to a Ham fest, the military collectors will converge upon you.
If the unit is in reasonable shape and you have the power unit, cables,
headsets with microphones, etc., it should bring from $35 to $80.

If it is the 75 MHz Beacon Receiver, there are some conversions
used by the amateur radio astronomy folks. Can be used to detect
meteor showers based on reflected signals from OTH beacon sites.

I have a driver for an antique Utah horn speaker for sale. The driver is complete with cloth-covered cord and has two metal connecting tips at the end. The label on the driver says "Utah Made in Salt Lake City". There is a small crack in the metal casting which is not too conspicuous.

Best offer or trade for any sort of telegraph item. My particular interest is Speed Keys with names like Vibroplex, McElroy, Speed-X, Bunnell-Martin, etc. Other keys cheerfully considered! I'm also interested in Western Union/Postal Telegraph ephemera.

Happy New Year to all!

David,

I too am a new R390A owner and have been looking for a source for manuals.
I called NIST and found that they do have them available, however, I was told
that they were not in stock and could require 2-4 weeks for delivery. They also
quoted me a price of $38 for the depot maintenance manual! As you may know,
there are several manuals available for the R390A, but the most useful is the
depot maintenance manual. This is the one that is intended for anyone doing
a complete overhaul of the radio.

A better source for this manual, which I opted for, may be Fair Radio. They are
selling reprints of the depot maintenance manual (the same that you'll get from
the gov't)for $15.

Source record: 123904
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,sci.electronics.components

Hello,

I am looking for the following obsolete/discontinued ICs for an
Eddystone 958/12 communications receiver:

CA3000 - Differential Amplifier (RCA)
CA3002 - IF Amplifier
CA3012 - wide-band Amplifier
MFC4000B - audio amplifier, 4 pins (Motorola) (ECG-752)
NE561B - PLL (Signetics)
NE562B - PLL (Signetics)
SA21 - amplifier (Sylvania)
SLC641C - double balanced modulator (Plessey)
[SLC640C is a less desirable substitute part]
TCA160 - audio amplifier
uA757 - IF amplifier (Fairchild)

I would like to purchase several of each of these for spares.

Also, I would be interested in purchasing a whole 958/12 or parts for
repair and restoration.

Please email me if you have any of these items which you would be willing
to sell.

Thanks,

Looking for a source for "Snap Rings" such as those used on the shafts of the "S" line. Email please to w4la@aol.com.

Thanks...
Todd / W4LA

171. Heathkit Apache transmitter for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-06 00:00:00 UTC
From: Bill Redmond <w3ih@riolink.com>
Message-ID: <01bbfb82$f3fa2d80$LocalHost@default>
Source record: 123907

This Apache is in very good shape, both electrically and mechanically.
Appearance ditto. Would rate
a 9.5 on a scale of 10. I have been using it on the air, but needed a rig
with 160 m. Audio has been modified
to get top quality AM. No more scratchy Apache. Added built-in antenna
relay. Reply here, or e-mail to
w3ih@riolink.com or call (505) 744-5667 and ask for Paul.

172. Invitation & Collins Reflector goes fully automated

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-06 00:00:00 UTC
From: crippel@exis.net
Message-ID: <32d090d1.39690178@news-3.exis.net>
Source record: 123908

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-Mail to:

crippel@exis.net

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

-73-

Here are the instructions:

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.es.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send the following E-Mail message to:

LISTSERV@LISTSERV.TEMPE.GOV

Leave the "subject header" in the body of your message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-Mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-Mail message to the listserver. Follow those instructions exactly and send the

second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-Mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins affectionados everywhere. Enjoy!

173. R-390A restoration by Chuck Rippel

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-06 00:00:00 UTC
From: rhys@ix.netcom.com
Message-ID: <5apiig$1fu@dfw-ixnews10.ix.netcom.com>
Source record: 123909

From: rhys@ix.netcom.com(Lawrence D. Wolken)
Subject: R-390A restoration by Chuck Rippel
To: rec.radio.amateur.boatanchors

Howdy Gang --

Just brought home an EAC '390A that I had dropped off at Chuck's a few

weeks ago and it is unbelieveable what he's done to it.

Cosmetically: not only does he repaint the knobs, escutcheon, and meter bezels with black epoxy paint but he bakes it on. The front panel on mine wasn't bad so he just repainted the lettering and touched up the gray but he showed me a panel he had completely repainted - panel and lettering and it was beautiful with crisp lettering like new. EVERY screw on the front panel is replaced with new stainless hardware. Even the handles were polished to a nice shine.

Mechanically: the one I gave him had no PTO or Oldham coupler in it so needless to say the kc knob spun pretty easily. The shocker was when he returned it with a newly rebuilt PTO installed the knob spun even easier and smoother. He had cleaned and lubed the entire gear train.

Electrically: While most folks would hesitate to open up the PTO he disassembles, cleans, and lubes them and then sets the end points for exact linearity. When he got through with mine, it was true from one end to the other within 200Hz. We checked sensitivity figures while I

was there and found them to be from .12-.15 uv up to 15MHz.

He goes over everything else with a fine tooth comb and provides a complete printout of exactly what work was done on your '390A -- obviously a labor of love. If you want just one rig in your collection to be "right" -- perhaps beyond your own ability on the '390A -- you couldn't do better guys.

What's the old phrase -- everybody thinks they're a painter until they

see one. Well I've "seen one".

If you're thinking about having him do some work for you his home phone is 757-485-9660 evenings only after about 8PM.

Enjoy the new year and may it bring you many wonderful boatanchors in strange and suprising ways.

> A better source for this manual, which I opted for, may be Fair Radio. They are
> selling reprints of the depot maintenance manual (the same that you'll get from
> the gov't)for $15.

Randy,

Unless they've changed what they're selling as an R390A manual, the Fair Radio manual I bought was an unbound Xerox copy and is not complete. I was very disappointed by it. (Don't misunderstand, I LIKE Fair Radio - They are nice folks!)

The ones from NIST are new and complete. I bought a complete set of three (see below) from NIST and gave my Fair Radio version away. This is one of those times that you get what you pay for.

Manuals are:

TM 11-5820-350-10 Operator's Manual
TM 11-5820-350-20 Organizational Maintenance Manual
TM 11-5820-350-35 Field and Depot Maintenance Manual

FYI, if you're not familiar with the Army's TM numbering system, the last two numbers denote the level of maintenance as follows:

1 - Operator
2 - Organizational (done by the unit technicians)
3 - Field (evacuate to a field maintenance unit)
4 - Depot maintenance
5 - Rebuild (defined as returned to newly manufactured specification with all modifications and updates)

Disclaimier: This is from memory from my days as a Field Maintenance commander in the 1960's. If it's not 100% correct, it's close. ;-)

(remainder deleted for brevity)

Larry,

I'm glad to hear that there are more folks out ther bringing the fine receivers back to life. Rick Mish restored mine two years ago and what he did was very similar to what you've described, including installing all mods. Including ten tubes, mods, replacement pots for those that changed value, ballast tube mods, capacitor replacement, a new front panel, and so on, the cost ran a little more than $350. It was worth every cent! My R390A (still) appears and performs as if it just rolled out the factory door.

I haven't talked to Rick for a while, but the last thing I got from him had a return address of PO Box 3541, Toledo, OH 43608.

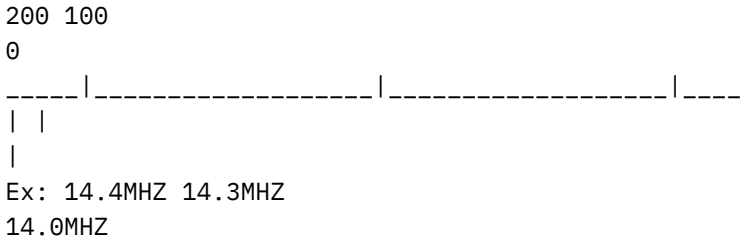
Source record: 123929

Any help would be appreciated to help me in getting the end spread on my 75-S1. I Cleaned and relubed the 70K-2 PTO, but am having trouble getting the dial to track. I can get it right on at the low end and 100 mark, but the 200 or upper end will be about 7khz high. I have several periodicals with information on setting the end spread, but they don't seem to work. If I set the PTO to 2600 (listen on my FT-1000 rice box) set the dial to 100, it seems logical that I should have even spread (provided the end point collar is set right). The coil (I think it is L-30?) on top of the PTO will move the freq at the low end , but I can't seem to squeeze the end to end range. (I set the upper end, then go to the "0" end and zero beat with L-??,). Is there a secret or trick that I am not finding. I understand how the dial mechanism, and the end point collars work, but I am looking for a different , proven method that I can try. The trimmer cap works in zeroing the upper and lower sideband in cal position, so that part works. I am open to suggestions on "How", or where to go for more info.



The marks on the low side of the above illustration represent the best I can get. Hope this is not confusing!

Thanks and 73's,

Todd / W4LA

I'd like to adapt the RF input on my R390A to something more universal than the "C" type connector that is currently on there. Since most consumer grade SW receivers have an on-board SO-239, I thought this might be the way to go. To do this, I was thinking of just making a pigtail cable from some RG-8/U with a UG-573 on the 390 side to a SO-239 on the other. Problem is, I can only seem to find chasis-mount SO-239 connectors. Is there any such thing as an SO-239 for RG-8/U cable? Is there a better solution than what I'm propsoing?

Anybody know how to replace the s-meter lamp on a FT901 and where I can get a couple of the lamps. Have no idea of the type used only know the lamp is out in the s-meter. One guy said you had to pull off all knobs and the front panel to get to bulb. Is this true. Something abt a grain of wheat bulb he thought. If it is all that hard maybe I should just forget it, what do you all think. Thanks for reading this.

Actually, I just found that out today. Guess I spoke too soon, cause I
didn't have the manual in-hand from Fair. I did not realize that Fair
was selling me a partial reprint (nor did they tell me, which I'm not too
happy about).

As for the gov't manuals, I'm sure they are complete, but they must also
be reprints. What I really don't understand is why I was quoted $38 for
the 350-35 when someone else picked one up for much less than that a few
months ago.

Might be hard to find a cable mount female UHF connector, but you could
easily put the male end on the RG-8 and then screw that into
a UHF double female barrel connector to end up with a female end.
(no rude comments, please :)

From: rfowler@concentric.net
Message-ID: <32d1c498.20614876@news.concentric.net>
Source record: 123995

I've been working on a HW-101 for about a month. It had been dropped off the back of a truck going down the road. I had to pull off the dial and retighten the plastic ring. The fella that assembled it used super glue on the set screws and I had fun with that.

I've progressed to the point of nulling the carrier. I can null the LSB, but when I go to USB, I'm off scale! I've discovered that the relay is turning B+ on and off depending on the mode for the proper oscillator. I've got suspension about the 0.02 mfd cap in the USB circuit. I haven't swapped it out yet. I have swapped 12AU7 and it works for a short time and them reverts back to the above problem.

Are there some articles that address this problem? I'm sure I can work around this given enough fooling with it.

Thanks for your input!

:What was the first "Kit" offered by the Heath Co.

According the the late Bjorn Heyning (who worked for Heath from the mid
'40s on) the first electronics kit was an oscilloscope based on the 5BP1
CRT. Probably the O-1. That was followed by a VTVM. I'm not sure of the
model number.

This is getting a bit off-topic for this group, but I'm developing a Heath
nostalgia page at
http://ourworld.compuserve.com/homepages/W_Wilkinson1/heco.htm and would
appreciate some feedback.

Thanks.

---

No! Don't use the unbalanced antenna input of the '390 for any
antenna larger than a small whip. This input largely bypasses the
1st antenna coils and compromises front end selectivity.
Use the balanced input for almost every use.
The connector for the balanced input is a standard twinax type
sometimes used in computer networking so they're not all that
hard to find. The simplest thing to do is to ground one wire of the
balanced input and connect the antenna to the other.....
An even better way to handle this is to get a broadband matching
transformer as used for computer LANs....they have a BNC connector
on one end on the unbal side and a standard modular telephone plug
on the end of a cable on the balanced side. Get one of these broadband
baluns from an industrial computer supplier, dyke off the modular phone
plug and solder the two wires to the twin-ax connector you plug into the
receiver.

I've measured the bandwidth and loss of three brands of these LAN
baluns and found the loss the be unmeasureable from below 500 Khz
to well above 30 Mhz, using a 50 ohm source and a 200 ohm balanced load.

Don't like this concept? Then wind a minuature 4:1 balun on a ferrite
core to use- but *don't use the unbalanced input*- it stinks.

How's it work? Well, on all bands, you can get a nice peak with the '390s
antenna trim control near 0 with a matched 50 ohm antenna (or my big inverted L
on the lower freqs and BCB). This indicates the ability to tune the front end to

resonance- as it should be. Without the balun, or using the unbalanced input,
the ant trim control is often set to one extreme or the other without any peak
being evident.

Case in point....there's a 50 KW BCB station a few miles from here. If I
use the unbalanced input, I get nothing but mix and IMD products from
it superimposed on every other signal + or - 50 or more Khz away.
When I use the little balun on the balanced input, and tune the ant trim
for a peak, the mix and overload problems vanish- I can listen to clean
weak signals way close in, and the RF level on the meter is even stronger...
As it should be.

Hi Niel

Be very careful when you infer that the Boatanchor List serve might be down. I did that about a year ago and the owner of the sytem damn near had me shot at sunrise and I was so humiliated by my own insecure question that I had to have my name removed from the listserver to save face. Har Har. The guy gets real testy when anyone even hints that his machinery and software might have a problem or two.

Good luck mate,

Bob Miller, KE6F

227. Ham Radio Auction - Dallas TEXAS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-08 00:00:00 UTC
From: GKitto <Gkitto@teleteam.com>
Message-ID: <01bbfced$05f1c500$af6c4f03@gkittocrege>
Source record: 124013

Dallas, Texas: The Dallas Amateur Radio Club is holding their annual Ham Radio Auction on Wednesday, February 5, 1997 at 7:00pm at the Wyatt's Cafeteria at the southwest corner of Forest Lane and Marsh Lane in Dallas. You may bring any amateur radio related equipment to the auction to offer for sale. The DARC will receive a 10% donation fee for each sale. There are no minimum bids, however, if the seller's equipment does not receive a satisfactory bid to the seller, the seller may make the highest bid in order to retain the equipment, but will be required to submit a 10% donation fee on the seller's bid price to the DARC, the auction sponsors. The DARC is also asking for donated amateur radio equipment to be auctioned and 100% of the proceeds will go to the benefit of the DARC. The DARC will make arrangements to pick up any radios and small equipment at your home, if you desire to donate equipment to the auction. Any large pieces (Towers, antennas, etc..) may be auctioned by photograph.

Set up will be at 6:00 pm and preview will begin at 6:30 pm. All equipment is sold as is , where is and the DARC assumes no responsibility for the condition or functionality of any auctioned items. So, BRING ON those unused radios, boatanchors, HT's, computers and all other ham radio gear. Anyone with questions or donations may call Bob Peters, K1JNN at (972) 288-0484 (Email - Soundimp@intex.net) or Glen Kitto, KC5WBQ at (972) 383-7507 (Email - Gkitto@teleteam.com).

228. Re: Set Screws (spline or Bristol Spline or etc.)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-08 00:00:00 UTC
From: w5jv@juno.COM
Message-ID: <19970107.184359.7071.2.w5jv@juno.com>
Source record: 124014

Hello Tony and everyone on the reflector,

I had said:
[Spline keys, etc]
>FYI, be careful when dealing with them between boat anchors. In the
>British metric system, they are called Bristol and look almost identical

You wrote:
Are you sure? The reason I ask is that they're almost unknown over here
(in the UK), and in fact the only set I've managed to get was a US-made
Xcellite 99 one, which are refered to as 'Bristol Spline Keys'.

Only that there are differences and my apologies to all for having
started this debate. How I learned that is a long story and not
worth the bandwidth here, but I will look it up in the library later this

winter and report back if I find any distinction. Over the years I have
collected examples of spline wrenches from war surplus, European
OEM maintenance packs, and of course US suppliers. What, if any,
differences in name they were made under would probably be an
interesting story nevertheless, though off the topic of this list.

Regards to all,

Doug

P.S. On a different note, where do I find 9 pin (not 8 or 11) octal type
sockets which can be used to make a power cord for the Collins sets?

distributor of discontinued ICs.

231. Collins 75A3 with filters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-08 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19970108031700.WAA21868@ladder01.news.aol.com>
Source record: 124017

Have a Collins 75A3 in cabinet, very clean condition. No marks.
Radio has two Collins filters installed.

Asking $650.00 or BO.

PREFER LOCAL PICKUP ON THIS ITEM IN CONNECTICUT.

Will consider trades for desirable Zenith tombstone radios.

232. Mini-anchors for trade.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-08 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19970108031500.WAA21786@ladder01.news.aol.com>
Source record: 124018

I have a pair of McMurdo Silver radios -- a superreg VHF receiver and
companion VHF transmitter for trade.
Also have McMurdo Silver Wavemeter (?) and coilset.
Also have a Regency ATC-1 80-10 meter ham band converter. Very
small and looks like a minature National rx with its rotary scale! Cute!
Have manual for this item..

Interested in trading for antique Zenith wood radios -- prefer Tombstones
or Cathedral styles, or small wood table sets.
Also consider Philco, AK, RCA, etc.

Trade only!!!!

From: kb2rmi@pop3.frontiernet.com
Message-ID: <5b0ajq$ra2@node2.frontiernet.net>
Source record: 124022

I have the following that may be of interest to someone with an interest in older 11M stuff.
Pierce Simpson Bengal SSB 23 ch. synthesized CB base, was used for under 2 mos. when new by older gentleman. The rig was one of the last synth. rigs before PLL came out later the same year, so it is sort of an lame duck. The rig was replaced in the original box, which is scriffy, and put away. It is in as new condition, inside is bright and dust free, shows some polishing swirls on the bezel but that's about it, the mike is still clean, has all original papers incl. wty card, etc. and operates perfectly. Relive your misspent youth or just have a fun old thing to add to the shelf.
$75 or trade for ??

Also NEW COND. Browning Eagle sew on jacket patch as came w/ MK III Eagle, still in plastic baggie, can't be many of these left, nice add'n. to the Browning station collection. $35/trade, yeah it's steep but considering what some people are paying for the rigs, this would be a neat thing to have.

Or sell both for $100/trade for ?
All plus shipping.
Email please.

Good morning fellow scrap dealers. HI

I'm looking for a relativley decent condition Hammarlund HQ-110.
By decent, I mean no amateur holes drilled in the front panel.
But minor nicks scratches etc are OK. Missing components are not.

Having been hit with a wave of nostalgia, I am putting together
a copy of my original station. So if you're looking to make a
hole in your shelf for something new, send me some e-mail.

PS Even though I lusted after the clock, I never had one before,
it doens't have to be there now.

I havent found a great solutionfor this problem.
What I've done is quite non-standard and will make the purists
cringe, but these methods work. Here's two ways:

Carefully drill out the center of the huge BNC-like connector and
screw in a standard panel-mount BNC. If your relay is like mine, the
material is soft nylon or Teflon and is easily drilled out to take a
standard BNC. You do have to take care to avoid wrecking the antenna
relay.

-or-

If you have no plans to use the IF output, borrow the IF output BNC
connector. The tiny coaxial connector fits that BNC connector just
fine. You do lose the functionality of the antenna relay though.

246. R-1051( ) Manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-08 00:00:00 UTC
From: thomas.g.booth@den.mmc.com
Message-ID: <thomas.g.booth-080197140737@160.205.37.115>
Source record: 124032

I'm looking for information (manual #s & titles, etc.) pertaining to the maintenance manuals for the R-1051( ) radio (I know the R-1051 isn't a boatanchor in the classic sense, but I think it perhaps is a candidate from the solid state era). I've got a couple of frequency standard modules (P/N 6625-078-4718) which are in need of some TLC. I suspect I'll need the depot level manual as the modules have "not shipboard repairable" tags on them. If you have any info, please give a followup to this posting.

TIA -

TGB

P.S. Is the "partial repro" manual from Fair Radio sufficiently in depth to provide info on the frequency module?

Rich Fowler (rfowler@concentric.net) wrote:
: I've been working on a HW-101 for about a month. It had been dropped
: off the back of a truck going down the road. I had to pull off the
: dial and retighten the plastic ring. The fella that assembled it used
: super glue on the set screws and I had fun with that.

: I've progressed to the point of nulling the carrier. I can null the
: LSB, but when I go to USB, I'm off scale! I've discovered that the
: relay is turning B+ on and off depending on the mode for the proper
: oscillator. I've got suspension about the 0.02 mfd cap in the USB
: circuit. I haven't swapped it out yet. I have swapped 12AU7 and it
: works for a short time and them reverts back to the above problem.

: Are there some articles that address this problem? I'm sure I can work
: around this given enough fooling with it.

: Thanks for your input!

: Rich K8MEG

My experience with the HW101 is that finding a null works a lot
better if you replace the null pot and the null capacitor with
high quality units. It helped my rig a lot. Still, I suspect that
you have another problem lurking there.

Source record: 124039

My IF chassis went on the fritz. All tubes glow except V505(BFO) and RT510(current regulator). Here is what I got when checking pin outs:

V505 pin 5 and 6 are 220VDC with BFO switch on. Resistance readings on pins 5 and 6 are non existant. What does this indicate? Whatever it is its causing the rig to be deaf. Please help.

I swapped with a good chassis and the radio works fine.

John

254. FS McMurdo Silver 800 2-meter rcvr

this is a superregen, 4 tubes. requires ext supply light duty of 160 jolts. uses plug in coil for 144 and 220 mcs ranges, have only 2m coils. dial has vernier action and counter + manual text might lead one to conclude selectivity is better than the usual superregen. have manual photocopy. built in spkr. never tried it, i really intended to buy another model. silver also made a matching xmtr, can't recall the ##. for your 2m am net? $50, i ship. hue miller

Hi All,

Looking for a source for a manual for this old beastie...it has been on my Dad's workbench for as long as I can remember...he bought it at a friend's going-out-of-business auction.

Photocopies are OK - will pay copying and postage charges.

Thanks for your help.

Hello,

I was wondering if there was anyone on the system that have the knowledge in repairing a HW-101?

The problem with is that it will not transmit in voice or cw. I don't have time to trouble shoot, but looking for someone who could reasonalbe fix/look at it.

Thank

Michael KB5YTF

IMNSHO, there is no good reason to do this. It's a standard type
C connector, not something on a spaceship radio from the planet
Kraalkrak. Get a type C to whatever-type-you-like adapter. If you
can't find one locally, you can probably order one on the phone from:
Connector World Supply

260. 1922 QST magazine for trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-09 00:00:00 UTC
From: kilokat7@aol.com
Message-ID: <19970109001800.TAA19659@ladder01.news.aol.com>
Source record: 123847

For trade:
I have a duplicate March, 1922 issue of QST magazine
("QSR Hawaii" cover) which I am interested in trading for a similar
vintage QST issue that I don't have. I would also consider trading it for
a vintage radio tube(s) - pre 1930 era. The magazine is in good condition.
This issue has nice ads for:
-RAC-3 Audion vacuum tube
-Hull Towers
-Willard batteries
-RCA loop antenna
-Murdock headphones
- A-P tubes
-Paragon
-Grebe CR-5
-Stromberg-Carlson headphones
-Clapp-Eastham Type HR receiver
-Tuska
-Tresco
-Brandes
-Magnavox
-Cosley (big 5 page ad)
-Amrad
Any interest?? If so please E-MAIL kilokat7@aol.com

==========

If it has a bandswitch it is probably the model 20A. 20 watts PEP output from 2 6AG7 tubes. If it uses plug-in coils it is probably the 10B (10 watts PEP, single 6AG7). I think there were very few 10A's.

I put together a 10B kit in 1956. They were popular during the transition from AM rigs before SSB rigs were widely available. They were used as exciters to "drive" an amplifier (often the output stage of the "old" rig that a guy already had - after he made bias changes to convert it to a linear class of operation).

You had to have an external VFO (or use crystal control). The most popular VFO was made from one of the WW2 surplus "command" transmitters (BC-457, I think), which you can find from time to time still in the market. It provided operation on 75 and 20 meters.

Viking has 2 6146 finals, ranger had 1.
Viking had no vfo, ranger did.
Viking was older, Ranger newer.
People will walk past Viking in flea market, but will stop and
ask about the Ranger. (Well, used to. Maybe today some will stop
and ask about Viking as well.)

Methinks that your RT510 (aka 3TF7) has taken a nosedive. While plate voltage may be applied to the tube, your circuits won't work without the filament voltage. Say, don't suppose you checked your PTO tube, eh? Betcha its darker than the fringes of the Crab Nebula too. Or, could be that your tube filaments are gone. The ballast and the two tubes are all in series. Cal.

Hi all. I am constantly amazed at how much money people are asking for their boatanchors and parts for same. I often wonder how long prices will continue to rise and what the limit on prices will be in a few years. At todays prices, if I were to sell my small Johnson collection of about 10 transmitters and amplifiers and a couple of receivers, I could afford to buy a bigger house to put thema all in....But, then I wouldn't have the boatanchors to keep me warm in the winter. Saw a Viking Ranger 1 with a FIRM PRICE of $350 on it. Come on now, no Ranger 1 is worth that price.

Hi Gang --

Just got in the mail the 1997 edition of SHORTWAVE RECEIVERS PAST AND PRESENT (second edition) by Dave Osterman. It is a slick, thick (350pp)
thoroughly and beautifully illustrated volume of virtually every non-military (and many military) conventional and commercial receiver made in the last fifty years or so. The quality of this publication is
something that most of us are just not used to. Each rig is pictured

with a sharp high contrast detailed cut next to roughly a half page of

well organized specs.

Old friends such as Collins -- including ham, commercial, and military

(including R390 series); National; and Hammerlund are there as well as

a large sections on Eddystone, RME, and other defuncts. Also are included modern sand state receivers such as Racal, McKay, and Rohde &

Schwartz. High tech modern such as Harris are NOT included. I believe
his thinking was that this is to be a guide for BA shoppers and we're not likely to run into a Harris unit at a Hamfest. I'm sure there are

many other omissions but this is certainly the finest and most complete
assemblage of receivers I've ever seen in one cover. And there are even the inevitable suggested used prices -- always good for fueling controversy.

Run do not walk to your telephone. This book strangely enough is published by Universal Radio in Reynolds, Ohio. Phone number is 800-431-3939. Email is dx@universal-radio.com. The book sells for 19.95 plus shpg. Call THEM if you have questions about it... I'll be too busy reading. Enjoy.

Like I figured, replacing the tube did nothing. How could it when that
is not the problem. You guys failed to read my post properly. I
replaced the whole chassis...thats when the vfo tube ran okay.

Replacing the if chassis makes the rig work fine with the old or new vfo
tube. So now what? I thought there would be more than one response to
this problem...come on guys help out a fellow preserver of ols radios.

John

For Sale:

Nice working Tektronix 549 Storage Scope (Think the frame is good to 50 Mhz) on matching Tek Roll around cart with a selection of plug-ins to include: CA/1A1 dual channel, four channel, Differential, and Diode curve Tracer. Big and Heavy with bright CRT, road runner sweep and all the tektronix gadgetry. This is a TUBE scope and is quite big. I will ship UPS ground in two boxes if I can get the scope cart apart. EMAIL for details. No Probes, but have good power cord. Would prefer a trade for something useful but smaller, but will take $175 plus UPS as noted above. A real scope for the real radio/electronics aficianadoe.

The BFO and ballast tube were replaced. The only one that wasn't
replaced if the VFO tube. We'll see tonight if its a go.

John

283. Need RA-6790 help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-09 00:00:00 UTC
From: skytron@ix.netcom.com
Message-ID: <32d4fac5.10332663@nntp.ix.netcom.com>
Source record: 123870

Help!
I have a Racal RA-6790GM Receiver that I received as is. The front panel shows all zeros and the keypad is dead. I have investigated the A9 display board and the A6A2 controller board. On the A6A2 board I replaced the battery and fixed the traces damaged by battery corrosion. I have checked the board as best I can without the schmatice using an O-scope and meter. I am qualified to repair this radio but what I need the the schematics and or board service instructions. The manual I received with the radio did not include the schmatic diagrams.
If anyone has the schematics for the A9 and A6A2 controller board and has a scanner, I would be very greatful if they could scan just those pages and either post them or send them via E-Mail.
Once I have the schmaitics, I think I can repair the radio. Any other troubleshooting assistance would be appreciated.

Also if anyone has a A6A1 RS-232 interface for sale or knows where to get one please let me know.

Thanks in advance for any help.

From: nick@cs.unc.edu
Message-ID: <5b31ef$5ua@altair.cs.unc.edu>
Source record: 123872

Viking I - 4D32 final, no VFO, about 100 watts out
AM, CW, 160-10m coverage
Viking II - pair of 6146 finals, no VFO, about 120 watts out
AM, CW, 160-10m coverage

Ranger I - single 6146 final, VFO, about 60 watts out
AM, CW, 160-10m coverage (with 11m band)

Ranger II - single 6146 final, VFO, about 60 watts out
AM, CW, 160-6m coverage (no 11m band)

All are high-level plate modulation.

This is all from memory so I may be slightly off -
Summary: Ranger is lower power but has built in VFO

Source record: 123793

You didn't mention which tube(s) you replaced. As was mentioned, the
PTO, BFO, and ballast tube filaments are in series and any one being
open will cause all three to go cold. The voltage to the string is
from the 25.2 VAC winding of the power xformer. It also feeds the two
rectifier tubes on the power supply chassis. The 25.2 VAC comes in to
pin 2 of the ballast, RT510, and comes out of pin 7 as 12 VAC. The
resistance at pin 2 is .1 ohms and pin 7 should be 4 ohms. Watch out
for a shorted filament bypass capacitor C538 (.1 Mfd) at pin 3 of V505
if the resistance at that pin is zero. It should be 2.7 ohms.

Hope this helps.

Good Luck

Here's what I have after replacing all tubes in IF:

RT510
pin 2- 25.2 VAC and .5 ohms
pin 7- 0 VAC and 7.5 ohms

V505
pin 1- 0 VDC and 150K ohms
pin 2- 0 and 0
pin 3- 0 VAC and 10 ohms
pin 4- 0 VAC and 8 ohms
pin 5- 0 VDC and infinity (infinity with BFO switch off)
pin 6- 0 VDC and infinity (infinity with BFO switch off)

please post response to the group...thanks...John

They said the stock market would never break 1000,
then 2000,
then 3000,
then 4000,
then 5000,
then 6000,
and it is now over $6000!

Never forget in a "Free Market", any item including a Ranger, is
worth what someone, if only one, will pay for it!!! Granted,
maybe not you but the next guy might.

That's exactly the point - they are not making them anymore and if you
want a radio that you can tinker with and fix, a new sandbox isn't going
to do it for you. The RANGER is extremely popular and one in pristine
condition would be well worth $350 - $400 to many people, including me!

>and ask about Viking as well.)
>
>Rick K2XT
>

There were two VIKINGS - the Viking I used a 4D32 final and the Viking II
uses a pair of 6146s. The other difference between the Viking and the
Ranger is frequency coverage - the Viking covers 160 to 10m continuously
thus making it popular with pirate broadcasters.....

Source record: 123880

If you have a detailed schematic and DMM how can you trace the exact component at fault. Mind you this is all you have for equipment. The schematic shows voltages and resistance readings for all tube pin-outs.

> 73...Mike VE3FGU

Simple supply and demand economics. Obviously, you wouldn't pay $350 much for a Viking Ranger I (and neither would I), but apparently some folks will. BoatAnchors are currently in vogue, so lots of people want 'em. Add in the investment/speculation guys who buy stuff cheap and turn a quick profit and you get to today's prices.

Quite often the resellers add no value other than to bring the stuff to hamfests or run classified ads, but that too, I suppose, serves a purpose.

IMHO, little of the old "junk" is worth the prices being asked. (Hallicrafters stuff, in particular, seems to be about the highest priced while having some of the worst performance.) I enjoy fixing stuff up and find that often requires exhorbitant amounts of time. Consequently, all I'm willing to pay is "junk" prices.

Regards,
Bill Sorsby, N5BU

>using crystals.
>73...Mike VE3FGU

Does the vfo work on any of the bands? If not, I'd check
the 18k power resistor that's connected to the
OA2 regulator inside the vfo compartment. It is very common
for the resistor to open up. I forget, now, what the wattage rating
is, but replace it with one about twice the rating, 5 watts should
do nicely.

Good Luck, Chuck (WB3FJJ)

313. Need advice about chassis voltage

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-10 00:00:00 UTC
From: caseyx@ssd.intel.com
Message-ID: <5b5qpu$h1s@news.co.intel.com>
Source record: 123883

Excuse me for re-posting this question. I asked it a couple of days ago, but didn't get any response from the always helpful folks here. I was hoping to start working on this radio this weekend, so if someone can provide some help please cc it to casey@imagina.com.

Anyway, it's a Heathkit AR-3. It has other problems, but the one that concerned me is it's showing about 30 VDC from any point on the chassis to earth ground, the antenna/ground wires arc slightly when I connect them to their terminals. Also, there's zero resistance between the antenna and ground terminals, which doesn't seem right.

Can someone please point me in the right direction as to probable cause? Thanks very much,

Casey (casey@imagina.com OR casey_bahr@pmug.org OR caseyx@co.intel.com)

A lot of us grew up with these radios -- receivers in my case -- and now that i can afford it, i will pay a few bucks to relive the memories and confirm they were as good as i thought they were then.
keeps me out of the bars, out of the arms of another woman, and off the streets at night.
also keeps me from going to bingo when i don't want to go ("gotta fix this")

hell I almost bought a 12 year old Maserati last year (lost a $500 deposit) because i'd always wanted one (the wife approved!!). business kept me from doing it.

but if i want a tmc gpr-92 and have the money legally, what business is it of yours? nothing hostile, but reality. as long as i'm not burdening society with my boatanchor extravagances, let me do it.

Hi All...

When I left Canada in 1989 I was faced with the choice of taking my
KWM-2 with me or my Kenwood TS440SAT...and after weighing my 2 huge
cases..(I was departing by air!)...decided that the Collins had to go.

I wish I had kept the Collins, and paid the Excess Baggage Charge to
keep the Power Supply and sold the Kenwood...I only got $300 for the
Collins which was in Museum Condition!

(and the 390....etc!)

Now I am settled in the UK with a bit of space in the shack...

Really want a good old Military Radio so I can get onto the Europe Mil
Radio nets....I listen....with envy!

Cheers...all...

Considering the price of 6146's and a pair of 1614 modulators, $350.00
is not that bad. Try cranking the mod up to 125% on your Kenwood.

The neighbor watches too much tv anyway!

I am selling my SX-42.

This receiver is in very nice condition and is complete.
I prefer a local pickup; I would prefer not to ship but will do so
insured
at buyer's risk. This thing weighs 52 pounds!

I just bought this receiver last week from an ad on this newsgroup.
I screwed up -- I had the SX-42 and the SX-32 (SX-28) style radios
confused in my mind. This is the UGLIEST radio I have ever seen.

The only flaw I could find is where someone milled a line located between
the bandswitch knob and the tuning knob. This was very professionally
done on a milling machine -- my guess a company nameplate was
there at one time.

Asking $300.00 F-I-R-M.

1 860 749-7186 9AM to 10PM EST Leave phone number if I am
not in.

Will consider SX-28/SX-32 trades.

>
>Rick, W7AV

I think its an attempt at humor - and I thought it was pretty funny!
He means that if everyone gets a new old call he'll be the only one
with a different format call.......

Anyways I happen to agree with you. I just couldn't pass up the
opportunity to get a great old-time callsign. The last time was in
1976 - twenty years ago. I was very lucky - got my second choice.

When I was getting interested in radio back in the 1960s we looked up to
the older guys with the two letter calls as a source of knowledge and
experience. Now, thirty years later I am proud to carry on this great
call and be a source of knowledge and experience to newcomers to the radio
hobbies. It also means we are becoming "Old Buzzards"

I only hope I am worthy!

73,

Michael Crestohl, W1RC

I have a web page up for all you guys that need info on older military commo gear. This project has surprised me with over 2300 hits since the middle of October '96. This is an updated version of the "original" Mil List that Bill, NJ7P has up. The URL is :

http://telalink.net/~badger/millist/index.html

This page contains basic descriptions and info on quite a bit of older mil gear. (see something that should be there and isn't, let me know and give me the specs, I'll add it. Photos welcome as well for posting)

>maybe not you but the next guy might.

Absolutely! And don't forget -- they're bargains compared to
the original price factored for inflation. A SP-210 with speaker
and power supply that cost the princely sum of $500 in 1939/1940
is actually equivalent to a $6000 (1997 dollars) radio today.
So someone asks the equivalent of 5% or 15% of the original price
(adjusted for inflation); what's so bad about that.

Here is a cut from the "Care and Feeding" document I return with a
restored R390A:

"If you wish to use the proper connector, there are several approaches
from which to choose. A combination of a UG-971/U and a UG-636A will
adapt a BNC connector to the "balanced" antenna input. A UG-970/U
will adapt a PL-259 to the "balanced" antenna input. A UG-636A/U will
also adapt a BNC directly to the "unbalanced" antenna input."

Good grief. Here we go again.

Most Johnson Vikings go for $125-$225 depending on condition, whether they are a I or a II and perhaps if they have a VFO. Good luck finding another Viking in decent shape for $25. But we're all happy you found the one you did ... But we all also wonder why you have a problem paying a price which represents reasonable value -- even at twice the going market, all things considered. A reasonable price for a fine radio like Viking II is money much better spent that ten times that amount on the next disposable appliance from across the Pacific that can't be repaired, never really worked right in the first place, and about which most buyers will grumble until the next hot model appears ....

While $350 may be the high end for a Ranger in really pristine shape, $250 is pretty ordinary -- and frankly, a fun radio for the price of two or three fine restaurant meals for two, or a modem that will be obsolete in 6 months.

AX9909. A $19 vacuum tube that now sells for maybe $125 each IF you can find any -- rummage sales not withstanding. Especially too bad because of the fine series of WRL/Globe transmitters they are used in ....

I havn't read all the definitions yet but they're all right on.
Incidentally(sp?) tube equipement is making a comeback in the audio field
due to it's superior sound. Everything old is new again. I always try to
take some tube equipement to Field Day. It makes just as many contacts as
the DIP equipement and provides conversation for the off hours.

Don't know what exactly you're looking for but I had an interesting experience the other day. I was at my friends condo and she has a baby monitor. It operates on 47 or 49 Mhz, the same as a lot of cordless phones. We could pick up six different conversations people in the complex were having. there are only three other units in her building so at least three of them were coming from a distance of over 100 feet. Don't consider any conversations you are having as being private.

Nick - you get ten out of ten for the descriptions of the Ranger/Viking transmitters. Well done!

There are actually two versions of the Ranger I - the later ones have an added chassis and circuitry for grid-block keying. The added chassis is located in the front right side of the Ranger and can be easily seen by looking down inside the cover.

Enjoy!

->cause? Thanks very much,

->Casey (casey@imagina.com OR casey_bahr@pmug.org OR
caseyx@co.intel.com)

The 30V to gnd may be a bad pwr xfmr. As for the "0 ohms" between Ant
and Gnd terminals: that may be due to a low-resistance winding of a
coupling xfmr connected bertween these two points. The schematic
(should you be fortunate enough to have one) should indicate this.

Good luck. . . . . .

the ranger is easy to "Hi-Fi" the mod xformer in the ranger will pass full fidelity audio while the viking 1 and 2 have a restricted mod xformer. the viking 1 uses hard to find tubes and the 2 is very hard to "Hi-fi" if your into CW the 2 is a fine rig (I used to own one)...K2koq

I am attempting to repair a friends Fairbanks-Morse console
that uses the Fairbanks-Morse number 9A chassis.
I am in need of a schematic. Anyone have a Ryders or Sams
for this rig?
It has a very nice main dial sort of like a large rotary telephone
dial. Another interesting thing about it is that on Jan 3rd 1942
the FBI came to the house of the German immigrant owners and disabled
the shortwave capability of the radio. They wrote the date on the rear
of the chassis and it's still there. I wonder what they did to it?
Any help or advise will be greatly appreciated.

BA'ers, -= Jan 12, 1997 =-

I have a new (actually old) extensive article on Radio History on the NJ Antique Radio Club's HomePage. It was written by John V. L. Hogan in 1922 for his book "The Outline of Radio." He was later licensed W2XR.

http://www.globalent.net/oldradio

John Hogan built his first ham radio station in 1902 at the age of 12. By 1906 he was working for De Forest studying plate current. In 1910 he went to work for Fessenden at the Brant Rock Station. ....and_so_on.... you can also read Hogan's biography on the web page too.

I have enhanced Hogan's article with HypetText Links to additional information on my and other sites. You will find additional photos and information added to the article, including: A Spark Transmitter sound file sending CQ_DE_BO, Fessenden's Brant Rock station's sign, and a well done retransmission of Fessenden's first A.M. voice broadcast in 1901, via spark transmitter. (He used a carbon microphone in the ground side of the antenna matching coil.)

I hope you all enjoy this, please let me know. I'll be away for a week at school, so please send any mail to me direct. I'll try to answer all when I return.

Out West here (with apologies to Texans), its worse than that.
Boatanchors are not even coming to the swap meets anymore, after
previously reaching prices worth yelling about.
I was amazed that we could get $75-$100 for DX-100's that weren't
even in good shape. Now I probably couldn't find another one to
replace the one I kept, which came from some guy's chicken coop.

See you on 10 meter AM when things get better...

Dear Barb,

Just for the heck of it I changed C538 just in case. As
luck would have it the problem still persists. I will
attempt to check the possible cold solder joints on pins
2 and 7. One thing I noticed is that when the ballast
tube is in place, the socket can be rotated slightly
clockwise and counter clockwise only a tiny bit (.015").
Will let you know what happens.

John

..because it is about the BIG EVENT for BA'ers: the bi-annual
Classic Radio Exchange contest - you got 'em, been bragging
about 'em - now let's HEAR them on the air!! >>>

1997 Winter CLASSIC RADIO EXCHANGE ("CX")

The CLASSIC EXCHANGE is a contest celebrating the older commer-
cial and homebrew equipment that was the pride of our ham shacks and
our bands just a few short decades ago. Our object is to encourage
restoration, operation and enjoyment of this older equipment. A
Classic radio is at least ten years old (age figured from first year
of manufacture), but NOT required to participate in the Classic
Exchange. YOU MAY USE ANYTHING in the contest, although new gear is a
distinct scoring liability. You can still work the great ones with
your new equipment!

The CLASSIC EXCHANGE will run from 1900 UTC Sunday, February 2,
to 0400 UTC Monday, February 3, 1997. Exchange your name, RST, QTH
(state/province for US/Canada; country for DX), receiver and trans-
mitter type (homebrew send final amp tube or transistor), and other
interesting conversation. The same station may be worked with dif-
ferent equipment combinations on each band and on each mode. On CW
call: CQ CX; on phone call: CQ Classic Exchange. Non-participants may
be worked for credit.

Suggested frequencies:
CW: 3.560, 7.060, 14.120, 21.180, 28.240
Novice/Tech Plus: 3.695, 7.120, 21.180, 28.240
Phone: 3.880, 7.290, 14.280, 21.380, 28.320

Scoring: Multiply total QSO's (all bands) by total number of
different receivers plus transmitters (transceivers count as both xmtr
and rcvr) plus states/provinces/countries worked on each band and
mode. Multiply that total by your CX Multiplier, the total years old
of all receivers and transmitters used, three QSO's minimum per unit.
For transceiver, multiply age by two. If equipment is homebrew, count
it as a minimum of 25 years old unless actual construction date or
date of its construction article (in the case of a reproduction) is
older:

Total QSO's all bands
times
RCVRs + XMTRs + states/provinces/countries
(total each band and mode separately; add totals together)
times
CX Multiplier:

SCORE = QSO's x (Rx + Tx + QTH's) x CX Mult

Certificates and appropriate memorabilia are awarded every now
and then for the highest score, the longest DX, exotic equipment, best
excuses and other unusual achievements. Send logs, comments, anec-
dotes, pictures to Jim Hanlon, P.O. Box 581, Sandia Park, NM 87047.
Include TWO-stamp SASE for Newsletter and announcement of next CX.

Hope to hear you all on CX!!

Source record: 123762

I'm looking for the crystal holder to complete my 1939 vintage National NTX-30 transmitter.

This crystal holder is about 3.5" long with a 5 prong plug on the back end. The (optional) black front panel is about 2.5" x 4" with two handles and a switch. In between the front and the rear is a rectangular can with places for four crystal blanks (up to 1" square). I suspect that at least the 5 prong plug is marked "National Co. Inc". It is designed to slide into a recess in the NTX-30 front panel.

Does this sound like anything in your junque box?

tnx es 73, Niel - WA5VLZ

Source record: 123767

Looking for a reasonable replacement for the cooked power transformer in my otherwise ok National NC-183D. I don't really need the 2.5V secondary since I can obviously replace with 5U4 with rectifiers. Another scheme might be to rebuild the existing one - know anyone who will do it? Problem's in the primary so it's a bit hard to get at.

The manual doesn't say anywhere what the actual transformer specs were - no voltages or current ratings - strange and this makes life a bit more difficult.

Pay well for a good replacement.

Tx

Bob

ps: still looking for a Lafayette HA-410 - pay high for a mint one.

Message-ID: <32D9828B.2B13@texas.dseg.ti.com>
Source record: 123769

Dear Barbara,

I found the problem!! The original IF module had filament wires going only to pins 2 and 7 for RT510. My other module had jumpers going from 2 to 3 and 7 to 8. If you look at the ballast tube you'll notice that internally there are actually 4 pins that work. They are pins 2 and 3 and 7 and 8. Apparently my back up ballast tube was missing pin number 7! It had broke(not by me) and without those jumpers on my other IF chassis it would not work. I figured all IF chassis had those pin
connections jumped. I figured it was something stupid and simple. The radio is practically new. I couldn't believe it to be a cap or resistor.

Thank you Barbara for helping me out. At least now I can stop sleeping on the
couch.

Sincerely,

John Berenyi

I had one, and my nephew (then aged 5) had a real kick out of those knobs turning around and all adjusting themselves with no operator in sight! I remember the set needs 10A at 28 volts (if you get your 400V and your 1200V seperately; you can feed the filaments separately and get along with 5 amps... You need a switch that feeds all channel wires but one: when you change channels the motor gets current util it is on the proper setting again. Oh yes, if you don't care for authenticity it could be replaced with a power transistor.... and a standard switch.

Good Evening to everyone on the list,

I am looking for an AN/T-824-B transmitter which
is the matching unit to the R-1051-B. I would like
to try one in my MARS net service.

Will consider an AN/RT-618-B (xvcr) but prefer the
T-824-B.

I don't expect to find one, but if one is available for
trade or sale, please contact me via private post.

Regards to everyone,

Doug W5JV

From: fehner@cts.com
Message-ID: <32d92de1.9613631@nntp.cts.com>
Source record: 123839

The Mod 1 type is better because of changes in the throughout the receiver. The trimmer caps were added to compensate for different runs of mechanical filters. The bandwith increase for 16 KHz was achieved by stagger tuning the IF xformers. All the changes can easily be added by the owner except for the trimmers.

BTW, there was a Mod 2 and 3 depending on the original order number.

Sorry to hear of this.

This is a problem when sending irreplaceable heavy things.

UPS and other carriers don't guarantee things will remain upright
during shipment.

Anything that sticks out the sides may get a lot of unexpected
pressure applied to it. Be sure it is packed so there is no way
pressure can be applied to the knobs in front, or any binding posts or
connectors sticking out the rear. You may have to make some custom
cardboard spacers to keep the weight off the protruding parts.

Well, I'm sure this has been mentioned before, but a 2X1 call is about
the worst possible call for working DX, IMHO. Even though these calls
have been around for years now, many DX stations believe they are
missing the last letter when they hear a 2X1 call under difficult
conditions.

So, in some cases at least, there's more than vanity involved :-).

Have you considered what effect this newsgroup and
other Internet resources have on the picture?

In the rural MN town where I grew up, population 736,
you could hear Swedish and Norwegian spoken on the
streets, and most items in the local junk store sold
for $2 or less. Why? Think about how many customers
they had. Imagine how much your average BA would
have fetched in my hometown's junk store 35 years ago.

Now, think about how many thousands of people read
newsgroups and visit WWW sites. For virtually no cost,
seller A in in my home town can inform potential buyers
from Juneau to Key West that he has <fill in the blank> for
sale. Kinda like putting a free want ad in every local
newspaper in North America.

Get it?

>
>I only hope I am worthy!

Same here! My "elmer" was one of those ol' timers with a 1x2 call sign,
and I looked up to him for guidance and assistance, which he freely gave
me. "Back then" (the mid 1970s for me) the 1x2 call was something to be
respected and admired, because the holders of those calls he earned the
top-level license (the hard way, back then) and had the experience and
knowledge to help the newcomer get started and stay active.

I am also proud to be able to sign a 1x2 call. I try my best to carry
on the legacy of my "elmers", W3FRC (sk) and N3FG, both old-timers with
Extra class tickets. I offer my assistance to the newcomers, help them
pick out gear, help them troubleshoot gear, give exams, and do whatever
I need to in order to further this great hobby.

I, too, hope that what I do in this hobby makes me worthy of signing a
classic 1x2 call sign.

: according to the manual. Also, I cannot get it to drop down by tuning

snipped

Bill - you need to have drive. Before you try to dip the plate you need to peak the drive (grid) tuning and get approx. midscale reading (2-3 ma) of grid current. If you don't get any drive into the finals the plate current will be limited by the setting of the clamp tube, a 6AQ5.

or

Chuck Rippel
crippel@exis.net

I have seen Rick Mish's work and it is excellent. I understand he recently raised his prices, so expect to pay anywhere from $500 to $750 for a complete overhaul depending on what your receiver needs. Rick also sells reproduction covers that are a reasonable (but not exact) reproduction of the originals.

I haven't seen one of Chuck Rippel's R390A's, but based on his reputation, and on his work on a JRC that I own, I'd expect his R390A's to be excellent as well.

I would estimate a properly packed R390A to cost about $40 to $50 to ship via UPS Ground.

403. AEA MM-1 Documentation Wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-13 00:00:00 UTC
From: dick@merlin.libelle.com
Message-ID: <dick-ya023680001301971521410001@news.zippo.com>
Source record: 123706
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I am looking for a user manual or other documentation for the original AEA MM-1 MorseMatic keyer. This is not the more recent MM-3, but the original MM-1.

I will gladly pay copying and postage costs.

Thanks very much.

Pack it well and ship it by Greyhound.
It will ride 12" off the ground.
If it's heavy it will be slid to a cart and rolled to receiving
without ever going any higher.

Pack it for a 8' UPS drop, ship it by bus, and it will get there
in one piece.

R390A from Texas to Atlanta $48 total and it only took 18 hours!

412. Heathkit SB-310 manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-13 00:00:00 UTC
From: tyree@albireo.isi.edu
Message-ID: <5bdusd$e4d@albireo.isi.edu>
Source record: 123715

I have just found a Heathkit SB-310 receiver at a swap meet at a price that I could not refuse, even though it has no manual and was missing the line cord (which was easy to replace). It is either a factory assembled unit or it was assembled by an expert, because the assembly is flawless. I believe it is 1967 or 1968 vintage.

Does anyone know of someone who collects Heathkit equipment who would be willing to make a copy of the manual for the SB-310 (of course with reembursement for the copy costs and mailing)?

Thanks.

Message-ID: <19970113025100.VAA13835@ladder01.news.aol.com>
Source record: 123777

I am sad to report to those who inquired that the
SX42 I have been advertising forsale or trade is no
longer on the market. It suffered extensive hidden damage
in the hands of UPS that was only discovered when it was
unpacked tonite for testing and for a demonstration to a
friend. UPS managed to mangle the cabinet mounting
rails, and also to to depress a small portion of the frontpanel.
The radio also no longer works -- the RF sections are
apparently damaged.

I appologize for the premature advertising of this item.

425. DX-100: Is there a problem tuning above 40 meters?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-13 00:00:00 UTC
From: vfo@worldnet.att.net
Message-ID: <32D9EC29.6760@worldnet.att.net>
Source record: 123784

Hello,

The reason why I am asking is this.... I can flip the high voltage on and get the current to dip down(no problem) with the "amplifier" adjustment on 160, 80, and 40 meters. However, when I try this on 20, 15 & 10 meters, the plate current goes to about 320 ma., which is too high according to the manual. Also, I cannot get it to drop down by tuning the "amplifier" adjustment knob. Is there a problem, or is this normal on these bands when using a dummy load? The drive control is fully counterclockwise and still the problem. I noticed that these suspect bands take much more movement of the drive control to get any grid current movement to start on the meter. I'm not sure if this indicates a problem.
Does anybody have any experience with this?

Thanks .... Bill.

Casey Bahr (caseyx@ssd.intel.com) wrote:

: Anyway, it's a Heathkit AR-3. It has other problems, but the one
: that concerned me is it's showing about 30 VDC from any point on
: the chassis to earth ground, the antenna/ground wires arc slightly
: when I connect them to their terminals. Also, there's zero resistance
: between the antenna and ground terminals, which doesn't seem right.

I can think of a couple of possibilities. One, you have leaky bypass capacitors somewhere, possibly on the 110 V side of the power transformer. Two, if you have a two prong plug, it may either be wired wrong or it is plugged into the wall outlet backwards. The reason for the latter possibility would be a ground loop between the shack and antenna ground rods and the house power ground.

I have no idea why there is no resistance between the antenna and ground connections. That may be normal. Remember that a DC ground is not necessarily an RF ground.

Source record: 123790

Rick you can fin dplenty of sources for manuals in the file:
MANUALS.TXT available in the ham radio resources section at:
http://www.mnsinc.com/bry/

I ran an ART-13 for a while. They are a powerful rig. The real fun is
getting the 28V DC supply up and running for the autotune feature and
watching the DIALS SPIN AUTOMAGICALLY by themselves! Now THAT is cool!
You need a high current supply though. I built mine with some surplus
transformers rated for about 8-10 amps, and it still got very hot! I think
they were cheap lossy xfmrs though!

See you on AM and CW!!!!

rgerson@irus.rri.uwo.ca (Rick Gerson) whistled a happy tune like:

Well, I tend to agree with all.....and good shot at some humor. Nice to
have to use ones brain to get it.

With the vanity callsign program winding down, at lest for the moment,
maybe it's time to find out just why some of these calls are some
special.

I don't have the background to start a news group so maybe someone out
there will see the same intrest I do and start on pretaining to vanity
calls. Since most of us went from 2x2's or 2x3's so they would be easy
to remember and use, maybe we best make the news group equally as easy.
How about "This is my vanity call and why it is special to me"?

I think you get the idea, I'm sure there are some interesting stories out there as to why some have asked for that special call. Beside it sure bets reading all the spam that goes around from time to time.

Bill N5WO formally KD5JR formally N5CMW formally KA5BCO

Try N5 Woodward Oklahoma which is where I live
Or North 5 West Oklahoma which is where Woodward, Ok. is
Or N5 Wonderful Operator which is what I am (remember it is vanity)

I'm sure there are some equally catchy call and phonetics out there for other calls. And, who knows maybe it'll make QST

439. Good luck with shipping BA's using Versa Pack

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-14 00:00:00 UTC
From: "JOHN L. BERENYI" <berenyi@texas.dseg.ti.com>
Message-ID: <32DBAF00.3192@texas.dseg.ti.com>
Source record: 123648

I recently shipped an R390 using UPS's Versa Pack system. Its THE only way to go. Its only $11.95 to do it and the box is extra. If you want that rig to come intact with no worries ask for it to be Versa Packed! The whole thing is surrounded by qick setting high density foam.

My R390 to ship from TX to RI including shipping, insur., box, and Versa, was $59.60.

I wouldn;t go that far. I've heard some pretty good sounding Vikings
using the stock mod iron. The big problem is the driver stage and the
driver transformer (way too small to handle the unbalanced DC current of
the driver stage).

Plenty of well proven mods for the low level audio stages available, if
your interested.

Source record: 123656

Need authentic circa 1920s or 1930s fixed carbon composition resistors for
restoration project. Typical vendors are Amperite, I.R.C., and Ohmite.
These resistors would not have color coded bands (wasn't yet developed).
Values Needed:

QTY. VALUE WATTAGE
2 100 Ohm 1 or 2 Watt
1 47K 1 0r 2 Watt

I'll pay your prices for good, vintage resistors.

<32D64757.4CD2@texas.dseg.ti.com>...
> If you have a detailed schematic and DMM how can you trace the exact
> component at fault. Mind you this is all you have for equipment.

Well you have to have an idea how the circuits and components should be
acting, then take a bunch
of readings, then think carefully and formulate theories as to what is
wrong, then take more readings
so that you can eliminate and/or support various of your theories, and
continue until you have a real
good idea what is happening. Then when you are really sure you might try
substituting components
(like swapping tubes) or adding caps in parallel to those in the circuit,
etc.

Robert -

I've visited your site twice and never seen anything worthwhile. I've heard three different tunes and seen two different crawls about what is ther, but seen NOTHING! Do you actually have any information there? If you do, I'd really appreciate it if you would drop the music and crawls and just do text!

Dave, K9SW

Great! Join us (where us is whoever cares to join in) on Feb 20 for
Green Key Night (& Day). Feb 20 is the anniversary of the beginning of
FSK in the ham bands, and is a time to celebrate our heritage and remember
the RTTY pioneers who worked so hard to make it happen. GKN is not a
contest, no rules, no logs to send in, just
use a mechanical teleprinter if you can
use vacuum tube gear if you can
use 850 shift if you can
have fun, wallow in nostalgia

i have for sale a National NCX-200 with problems.
it receives on a couple of bands, don't remember
which. has CW output on most bands. has
output in SSB mode also. ??? face is
in nice condition, chassis is clean, power
supply seems to work well. cabinet is
scratched in places with wear on
the edges, could use a coat of paint.
Make offer, Trade? no manual.

Robert... I had a look at your page. It seems that the text is white (I can see it for an instant before the white hammarlund background appears). Once the background appears, the white text is virtually invisible. That may be the cause of the problem the other chap reported.

I suggest you change the text color. I'm viewing it using Internet Explorer on a 133 MHz Pentium with 16 bit color. Definitely not a word processor : -)

In yesterday's mail I got a flyer from Antique Electronic Supply and noticed that they are selling 3TF7's for $20 apiece. Fair Radio used to have them also, for $17 I believe.

Personally, I've sworn off 3TF7's because they're so fragile. Instead I use 12 volt oscillator tubes in my R390 and R390A.

OK, I'll bite. The FCC assigned me KE3IV when I upgraded to Advanced. I kind liked the 3 roman numeral 4 (IV) combination so I kept it when I upgraded to Extra. 'Round about late November I decided to see if I could shorten the call, and put in for K3IV, which was granted. Since I'm now in 5 land, the call is K3IV/5, which has been pointed out to me reads as K-3-4-5!

I only put in for one additional choice, W5IX, because I liked the combination of 5 Six and 9. Someone in the Austin area got that one...

I have a GLEN custom 1600 for sale. It uses 4--4CX250R ceramic tubes. It
is
in PERFECT shape in all meanings of the word! If you havent heard of this
amp, I'll tell a little bit about it. The band-width on this unit is 40-2
meters.(about 7MHz through 145 MHz) It will take an input of about 4
watts-100 watts,(adjustable on rear of unit). It has an input on back for
direct key-up(re. footpedal). It runs on 120v ac. it has variable output(
kinda like the texas star 350 w/ variable). It has a built in watt meter,
that reads RMS, and is very accurate. The output is 1700 watts rms, 2700
watts peak, depending on how you drive it. This amp is beeing offered to
the
serious only. Not a scratch on it, no discolorings, no blemishes. very
PERFECT condition. Comes with origional paper work, schematics, and custom
slip/dust cover. Weighs about 90 pounds. 1800.00 + shipping, please dont
respond unless your serious,,, 73's, and happy modulating,, STRESS TEST.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

REVIEW: Shortwave Receivers Past & Present, 2nd Edition, Fred Osterman

This guide covers communications receivers from 1945 to 1996 and details information on over 500 table-top models. The radios it deals with are not ordinary table broadcast units but specialized pieces of equipment made for amateurs, short-wave listeners, military and government customers. Many of the older receivers are highly sought after by collectors, hobbyists and hams who are interested in "Boatanchors", a term of endearment for older, tube-based (and consequently heavy!) equipment.

Initially there is information on buying a used receiver, restoration and repair, a bibliography of periodicals, publications, clubs and on-line resources on the subject as well as an explanation on how to use the guide. Each manufacturer is given a chapter. A short discussion about the company, its logo, addresses and other general information follows. Each model is generally given a half-page with just about everything you'd want to know about the radio short of having the manual. Just some of the listings include features, specifications, circuit compliment (tubes and their function where applicable), accessories, comments, variants, where and when made, voltages, a neat symbol that indicates the type of frequency readout used, size, weight, etc. There is information of interest to collectors too, such as an estimate of rarity, new price and a general price range of current prices. The guide even has a section of radios that never were such as the Hallicrafters SX-112 and others!

Also included are the "dream" receivers - high-end equipment that most of us will never see - with names like Watkins-Johnson, Rohde & Schwarz, Harris, Racal, etc. Its nice to look at the pictures and enjoy the descriptions.....

Shortwave Receivers Past & Present is very well illustrated and produced. The author really knows his receivers, choosing models that are of major interests to hobbyists. As an example of this, Osterman has included certain military receivers such as the Collins R-390/URR and its younger brother the R-390A/URR because they are of great interest to hobbyists. Also included are the sought-after Collins 'A' and 'S' line receivers. In addition, some rare and virtually unknown receivers such as the DAVCO DR-30 and the Mosley CM-1 are included. Many of the receivers listed are from other countries. Nineteen pages is devoted to Eddystone which is a well-known British manufacturer. I found the price information pretty consistant with what I've seen on the Net and at some flea markets. A nice touch is that the author quoted a few of the

radios' values in Japanese Yen as well! Japanese enthusiasts are well known at larger US hamfests for buying up nice clean Collins and other American-made radios.

This guide is a very complete collection of equipment from all over the world and should be of great interest to anyone interested in radio receiving equipment. It is available from the publisher.

I bought a CB-hacked FTDX560 and am looking for another to
scrounge some parts from. Don't need tubes. also need
knob, reduction drive, and skirt for FV400 VFO and manuals for both.

Have datacom, ISDN, other goodies to swap.

Source record: 123669

Hello,
I am looking for a 6M AM rig to use as a remote base on 50.4. This will be tied in to a 440 MHz FM repeater. What I woud like to find is a rig with a good squelch. PTT and xtal control on receive and transmit. I will take just about anything that can be made to work. Please save me the trouble of plate modulating a Prog-line! E-mail me with what you have, condition, and what you want for it today!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-15 00:00:00 UTC
From: Mark Glusker <glusk@sgi.com>
Message-ID: <32DD56B2.41C6@sgi.com>
Source record: 123671

To eliminate the 3TF7 ballast on the R390A (from a post to the boatanchors list by Tim Rosaire on 5/1/94):

1) Obtain two 12BA6 tubes (same tube as the 6BA6, but it has a 12-volt filament) and substitute them in place of the BFO (position V505 on the IF subchassis) and VFO (position V701 on the VFO subchassis) tubes.
2) Then remove the 3TF7 (the front-right tube on the IF subchassis)and jump the two pins that would normally power-up that tube.

Simple yet effective and completely reversible for the purist.

>please let me know what month/year.

It was not hugely popular, though one of my high school friends
had one (late 60's) when we were first licensed. Seemed pretty
nice at the time....

No crystal filter like the 145, Q-multiplier instead, no real
SSB reception like the 180.... perhaps an awkward fit to the
amateur radio tastes of the time.

Hi

I've been having a cleanout of my radio shack and have the following
items surplus to my needs:

AOR AR3000 Receiver: 100kHz to 2036 MHz continuous coverage, NFM, WFM,
AM, USB, LSB, CW modes, 400 memories, computer control. In
original carton. $NZ950

Eddystone 680X Receiver: 15 valve boatanchor, 480 kHz to 30 MHz in 5
bands,
with orignal speaker and service info. Recently overhauled. My
pride and joy a few years ago! $NZ350

JPS NF60 DSP Notch Filter: audio processor that will automatically
remove
hetrodynes and tones from an audio output. In original carton, with
Dick Smith plugpack powersupply. $NZ150

I'll pay freight within NZ.

I'm only interested in New Zealand enquiries unless you organise all the
exporting!

73's

Chris

I am looking for these guys: HW16 HG10B DX60B HR10B.

I have in mind pieces that are in GOOD ORIGINAL UNMODIFIED COSMETIC condx.
Please, in your response, comment conservatively on:

1) overall cosmetic condx
2) how well it functions, or not
3) original manuals? (or none, or photocopies)
4) anything physically broken/missing/etc
5) price

It is unimportant that they function well or not, but price should
reflect that. I'm most interested in originality and cosmetic
quality.

TNX

502. Re: DX-100: Is there a problem tuning above 40 meters?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-16 00:00:00 UTC
From: rstevens@voicenet.com
Message-ID: <5blr1t$ud@news1.voicenet.com>
Source record: 123594

If I'm not mistaken, one of the DX-100's (the original one, I believe), used fixed caps in the PA loading circuit, and one (the DX-100B?) used variables (like all good designs should). I'm speaking here from poor recall of other people's experiences, as I only have experience with Johnson gear. I know a common failure point on my Valiant are the fixed switched output caps in the PA loading circuit. If one or more open, you would be unable to load down the plate current, which seems to be the symptom you describe.

Just a thought.

Not that I know of, but I do know a guy who modified
a johnson kw matchbox, to work on 160m, by paralleling
a vacuum cap inside. With a switch, to disconnect
it, it'll still work on all the other bands.

That's a pretty good substitution. I once measured the BFO and PTO
drift when going from 90 to 130 volts on the variac and it was less
than 300 cycles. Since the line voltage is usually 20 times
less variable than that here I too opted to run without the
current regulator tube and put up with the maybe 15 cycles of drift.

You can also make up a half-wave rectifier/filter/IC regulator module
to plug into the socket. Much more rugged than the 3TF7 but violates
the no silicon principle.

Hi Steve,

Thanks for your note to the list.

You wrote:
>.....I've heard some pretty good sounding Vikings
>using the stock mod iron. The big problem is the driver stage and the
>driver transformer (way too small to handle the unbalanced DC current of

>the driver stage).

In the Valiant, the driver stage is a 12AU7 feeding the P-P 6146's. T4
is the
interstage driver xmfr. In my case, my T3 (the modulation xmfr) was
taken
out and has to be replaced. Would you say T3 is okay but that V15 and T4
can be upgraded?

>
>Plenty of well proven mods for the low level audio stages available, if
>your interested.
>
Yes, very interested. Please advise. I do not subscribe to ER or AMI so
have no access to that literature.

In article <5bhj2s$25c@news.tamu.edu> furuta@cs.tamu.edu "Richard Furuta" writes:

> Since I'm now in 5 land, the
> call is K3IV/5, which has been pointed out to me reads as K-3-4-5!

Your call is not necessarily K3IV/5 `since' you're in 5 land. However,
you are certainly allowed to create a self-assigned indicator and to
add it after your call, so long as it does not conflict with ones
defined by the FCC or used as a call sign prefix by another country.
So if you like K3IV/5, you'll probably *love* K3IV/5VI7VIII9X :-)

I have a four nice old Heathkit DX series transmitters for sale. All of these units are in good to very good condition, but have not been powered up for at least ten years. They are part of my collection and have been stored in a stable temperature and humidity environment. All are completely original and unmodified.

DX-20 $95
DX-35 $100
DX-40 $85
DX-40 $85

DX-35 (parts unit) missing meter and knobs, with rack handles added to front panel. Meter switch has been replaced with a toggle. $25

All units are cost plus shipping.

Cheers,

THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH!

Hello!

Would you like to make thousands of dollars, quick,and legally?
Then keep reading....please take five minutes to read this
article it will change your life.It's true!

You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!
I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
intrested, keep reading; if you're not, have a nice day.

I was browsing around the newsgroups one day, and I
stumbled across this article. Since it had to do with making
money, which I never pass on,I decided to give it a try, and this is what
it said:

Here we go. A little while back, I was browsing through these
newsgroups, just like you are now, and came across an article similar
to this that said you could make thousands of dollars in weeks with only
an initial investment of $5! So, I thought, "Yeah, right, must be a
scam", but I was curious, like most of us , so I kept reading. Anyway,
it
said that you send $1 to each of the 5 names and addresses stated in the

article. You then place your own name and address in the article at
the bottom of the list at #5, and post the article in at least 200
newsgroups (there are thousands).

So after thinking it over, talking to a few people first, I decided to
try it.

I figured what have I got to lose except for 5 stamps and $5, right?
Someone who has tried it says:" I started getting money in the mail!

I was shocked! I still figured it would end soon, and didn't give it
another thought. But then money kept coming IN, tripling in size and
multiplying by 10-20 times the amount that I got the first week! In
my first week I made about 20 to 30 dollars. But by the end of the
second week, I had made a total of over $1,000!!!! In the third week, I
had
over $10,000 dollars, and it's still growing. This is my fourth week
(Oct 11) and I've made about $42,000 TOTAL, and the money is still
coming in.....".

Let me tell you how this works and most importantly, WHY it
works...also, make sure you print a copy of the article NOW, so you
get the informatoin off of it, and begin making money.
The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on
each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. It is also

a good idea to put on that piece of paper the number of the person who
you got the article from. Get five $1 bills and place ONE inside each
piece of paper that you just wrote on, and fold each piece of paper so
the bill will not be seen in the envelope (otherwise, nosey people
who like to steal envelopes with money in it will get yours).
Put one paper inside the envelope and seal it. Do the same for all 5.

You should now have 5 envelopes sealed, EACH have a piece of paper
AND a $1 bill stuffed inside of the paper. Make sure those words
that were stated above are stated on each paper.

What you are doing is creating a service by this, this is PERFECTLY
LEGAL. Now then, mail the 5 envelopes with the paper and $1
in each to the following 5 addresses:

1. J.Burgess
73 Pebble Lane
Blackwood , N.J. 08012

2. Josee Labelle
P.O. Box 54230
1562 Lonsdale Avenue
North Vancouver, BC
V7L 3L5

3. Occupant
P.O. Box 721193
Houston,Tx 77272-1193

4. E.J. Garbin
USF#1562
4202 E. Fowler Ave.
Tampa, FL 33620-1562

5. Occupant
54 Ridge Road
Waterville, ME 04901-4121

STEP 2: Now take the #1 name off the list that you see above, move
the
other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME
as
number 5 on the list. You can slightly alter this article if you need
to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least
200 news groups (I think there are close to 18,000 of them). All you

need is say, at least 200.
HOW TO DO THIS: If you have Netscape 3.0
do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS',
which

is on the far left when you're in the newsgroups page. This will
bring

up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to

something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST

CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once)

THIS whole article WORD FOR WORD, except to insert your name at #5,

and

to remove #1 off the list, plus any other small changes you think you

need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS

BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST

BOX. Click on SAVE AS when you're under FILE. Save you artcle as a

text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE

UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup

now by just clicking send, which is right below FILE, and right above

Cc: .

6)Here's where you're going to post all 200. OK, click on any news

group then click on 'TO NEWS', again in the top left corner. Leave

the

NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT

BOX, hit TAB once you're in the body of the message, and then click on

ATTACHMENTS, which is below the SUBJECT BOX. You will get another box

to come up. Click on ATTACH FILE, then find YOUR file that you saved;

click once on the file, and then click OPEN' now click on OK; if you did

this right, you should see your file name in the attachments box, and it

will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR
YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN
THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL
BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE IN
A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups,
you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM.
The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1
envelopes from various people all over the world within days. HINT THE
MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want
to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORK!!!!

Out of every 200 postings, let's say I ONLY recieve 5 replies, which is
actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including
yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500.

They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME
DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND
IF ONLY 5 PERSONS RESPOND!!!!!
When your name is no longer on the list, you just take the latest
posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO
THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting
again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars and see if it really works? I think so.....
People have said, "What if the plan is played out and no one sends you
the money?" So what! What are the chances of that happening when there
are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joing the actual Internet. Remember, play FAIRLY and HONESTLY
and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make
sure you print this article out RIGHT NOW, also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups
to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST
POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!
**By the way, if you try to decieve people by posting the messages with
your name on the list and not sending the money to the people already on the list, you will not get much. Someone who did that made $150 dollars,
and that's AFTER seven or eight
weeks! Then he sent the 5 $1 bills, people added him to their lists, and in 4-5 weeks, he had over $10K.
THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!

I replied to the original poster and didn't get a response, but I believe
his problem to be that he wasn't getting any drive, because
he said he had the drive control turned off. With no drive to the
final it takes all the plate current it can (limited by the
6AQ5 clamp tube and it has a pot associated with it to set the
final current). I know this because guess what I have been doing with
MY DX-100 the past few weekends !

An added bonus to this approach is that after installing the jumper simply cut two pins on the burned out 3TF7 and reinsert it along with its cover back into the tube socket. Voila, cosmetic perfection for the purist!

That will work too. Yet another variation is to find a 12BY7 tube,
which has exactly the required voltage drop and current, and leave
in the original 6 V tubes. You have to jumper some fine wires
around the base of the tube, as the two use different pins.

Over here in the UK they were used in hearing aids, military radios and
also in the HIFIX navigation system which operated on 160 metres.

Rick,

Well, I read his explanation of adjusting the drive down as an attempt to cut drive to the finals in an effort to reduce the runaway PA plate current. Of course, if the clamp circuit isn't properly adjusted, loss of drive will peg the PA current meter, but it sounded like this was all OK below 40 meters, and the clamp circuit isn't particularly frequency sensitive. I'm still betting on the loading caps. But at a distance, my record in these things is about 50/50, or maybe 60/40 on a good day.

Love these puzzlers, though, don't you?

Source record: 123630

About three months ago I purchased an R392 from Fair Radio. The matching
28 volt supply was no longer available, but the salesman offered a 24
volt/10amp
supply that would work. After using the receiver with this supply I
realized
I'm losing alot of sensitivity (the manual states the R392 will operate at
reduced
gain if powered with less than 28 volts, unfortunately I didnt find this
out till
after I purchased the 24 volt supply...) . Question: Is there a way to
increase
the output from the 24 volt supply (its an Elpac ELV240-24) to 28 volts?
Or does anyone have an easy to build homebrew idea that will work? Any
advice will be greatly appreciated.
Chris Krug (TubsC@aol.com)

Hi this is Lisa and I'm helping my dad clear out my daughter's new visit room. The following equipment and parts have got to go.

1 TMC SSB Selector/Converter, Model SBS-1/SBC-1A, SSB, ISB, LSB, USB, 3.5 kHz and 7.5 kHz bandwidths, various AGC speeds with AFC unit model AFC-2A, connectors, fairly nice front panels, no missing or broken knobs, meters look ok. 455 kHz. With all covers and tubes. Great for the R390/390A or any other boat anchor with 455 kHz IF. About 1/5 the weight of a CV-157 and more flexible. $200 plus UPS on approximately 60 lbs from zip 95827.

2 TMC General purpose low level HF exciter, model GPE-1A, 2-32 Mhz, CW, AM, CW, front accessible crystal oven for FT-243 style holders. With all tubes and covers, $150 plus UPS on approximately 30 lbs from zip 95827.

3 TMC two tone SSB test oscillator model 0-597A, complete with covers $100 plus UPS on approximately 25 lbs from zip 95827.

4 Lavoie LA 800D WWW receiver, 5-10-15 Mhz, with internal scope, standard, and speaker, with all tubes and functional, good front panel and all knobs $60 plus UPS on approximately 40 lbs from zip 95827.

5 Hammarlund HX50 SSB exciter, good condition no dents or major scratches, excellent front panel and no broken or missing knobs, with manual (copy) $175 plus UPS on approximately 65 lbs from zip 95827.

6 Command set receiver, 1.5-3 Mhz, Navy CBY46014, complete unmodified, with dynamoter, average condition, good front panel, small wrinkle dent right rear lower corner, bottom cover still fits. All original tubes. Black crackle finish. $50 plus UPS on approximately 20 lbs from zip 95827.

7 Hewlett Packard 200CDR oscillator, excellent condition, rack mount version $60 plus UPS on approximately 25 lbs from zip 95827.

8 Hewlett Packard 3400A rms meter, good condition w/docs $125 UPS prepaid conus

9 Hewlett Packard 427 Multimeter, cute, works great $80 UPS prepaid conus

10 Hewlett Packard 400L rms meter, excellent condition, $75 UPS prepaid conus

11 Hewlett Packard 91390 meter set consisting of an HP 410B multimeter and a 400D rms meter co-mounted in an engraved rack panel. Both

instruments are in nice condition and the panel color is a dark blue green. A rare item? 410B has RF probe and their are no major dings, dents, or scratches, front panel will clean up nicely. $175 plus UPS on approximately 25 lbs from zip 95827.

12 4 each 4CX350 [24v fils] with Eimac/Johnson air system sockets and chimneys, tested pulls from AN/GRC-106 Power Amps $125 for all Post Paid conus.

13 HF watt meter, ME-165 with internal 600 watt 50 ohm termination and swr bridge capability, from AN/GRC-106 and GRC-26D, Meter reads VSWR and Forward power to 600 Watts. N connectors with PL-259 Adapters included. Excellent condition. $75 plus UPS on 20 lbs from zip 95827.

14 Motorola Hard to find MC1590G IF chips TO-5 case, 5 each for $40 post paid conus.

15 2" crt type 2BP1, tested pull, with leaded socket and padded mu metal shield stock, with data sheet. No burns. $35 post paid conus.

16 10 each 2400 ufd/450 volt capacitors, surge 525v, Mallory and Sprague computer grade, tested for value and leakage. $185 for all plus UPS on approximately 25 lbs from zip 95827.

17 Ten new in box 6AG7 tubes, $30 for all post paid conus.

18 5 each type 80 tubes, tested pulls, $20 post paid conus.

I've never been inside an R390, but I'm wondering what kind of base the
3TF7 employs. It seems to me you should mod the old 3TF7 by jumpering
the required pins and use it along with the two 12BA6 tubes. Then you
wouldn't have to do anything to the chassis, thus relegating purism to
the basic lack of consumables.

: the output from the 24 volt supply (its an Elpac ELV240-24) to 28 volts?

I assuume the Elpac PS is a regulated supply. Generally in regulated
supplies, the output voltage is divided by two resistors to a low
voltage, which is compared to a reference voltage. If the reference is
higher, the output voltage is increased, if lower, the output is lowered.
The output voltage can be changed by altering the ratio of those two
resistors if you can find them, There is also likely a pot, either
internal or external to set the output voltage exactly. There's an
upper limit to the amount you can raise the output. If this is a
linear requlator, you would want at least 32 volts on the large filter
caps that are before the regulator section, if you are going to
get 24 V out (measured at the bottom of the ripple waveform with a
scope).

The part you want is from A.E.S. and is part number P-T20D89 for $12.95.
This transformer has some spare current carrying capacity, and will end
the problem that causes the original transformers to burn out -- too
light for the load.

Don't be tempted to buy the P-T156 or P-T20A14 as these cannot carry the
driver tube plate current in the primary.

566. Re: Help with Drake TR7?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-18 00:00:00 UTC
From: David Stadt <dhstadt@lnd.com>
Message-ID: <32E15C3B.2D50@lnd.com>
Source record: 123558

John:

If you have a FAX number I will copy the TR7 filter installation manual
on Tuesday and FAX it to you. I can FAX a copy of the AUX7 installation
and operation manual also. The filters are rather large metal
rectangular
cans and are definately not resistor sized.

Standard filter selection is as follows:

SWA SWB Filter

Out Out 2.3KHZ Manual says standard and do not move to another position
In Out A
Out In B
In In C

To receive below 1.5 MHZ you need to attach an antenna to pin 7 of
connector K. From the back, K is the second connector from the right.
Mine
is labeled "accessories." Pin seven is on the bottom row, third from
the
right. The mauual says to disconnect this antenna when transmitting and
that having this antenna connected will degrade reception above 1.5 MHZ.

I've got a factory TR7A with PS7, MS7 and RV7. It's about the only
solid state box I have any desire to own. :-)

Your assumption here that the Internet and newsgroups can only benefit the sellers is one that is not yet proven. I would agree that it is likely that major bargains will disappear when sellers realize the fair market value of their goods.

The use of the Internet and other forms of information distribution could only result in a fairer price for both buyer and seller and possibly result in a narrower trading range.

Should information be available that goods are in demand then the response from people having those items would be to sell. Bringing additional goods to the marketplace should have the effect of decreasing the selling price.

Anyway, that's the theory.

576. RE: Viking Valiant 2 problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-18 00:00:00 UTC
From: toneri@ils.net
Message-ID: <5bp9jm$qm9@nr1.toronto.istar.net>
Source record: 123638

I have had another try at determinig what is wrong with the Valiant II, no grid drive on 80 metres except when the OSC switch is in the ZERO position. Still no luck but I think it may have something to do with the keyer circuit possibly not turning on the buffer stage. I tested all the components except the by-pass capacitors in the keyer, buffer and driver stages and all are within spec. When I short the junction of R41 and R42 to ground (keyer stage) I get plenty of drive. I have tried new tubes in all three stages with no luck also. I am going to have another look at the voltages on these stages next just to make sure again that they are correct. It's VHF contest weekend so I don't think I will look at the Valiant again until Monday.

Source record: 123640

Hello Gang. I need a little help with my "new" Drake TR7.
First,the filter board,well it has 2 spots filled up. One is supposed to be the AM filter,the other is the 1.8 SSB filter. The spot that is marked "B" has no filter in it,but has a resistor stretched across where the filter should be. The "C" slot was empty. If I set the filter switch to either A or B,I do hear the audio changing,so I am wondering if that resistor deal in "slot B" IS the filter? If I click both buttons in, there is no audio. I have the 500hz cw filter which I was going to install untill I jazzed it up!
There is a 10k resistor very close to the filter opening and either I smashed that resistor lead,or it was broke. Anyway,got to replace that, Radio Shack??? Wattage rating?

One other area I need help...
The rig has the AUX-7 board,but I cant seem to HEAR any of the Broadcast AM stations down in the AM broadcast band. It seems as if there is full attenuation in that area... Is there a seperate antenna I need to hook up somewhere? (thought I read that somewhere)

Any help would be great!
Best 73 de john
N9UKX

(still looking for the remote VFO and an old BUG or KEY)

$$$$ This is what many people call A $$ scam but, IT WORKS you can't lose!!!!!!$$$$

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whats $5.00!
So I sent in my money and posted.Everyone was calling it a scam, but there are SO many new users!

Well, two weeks later, I began recieving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, the By the end of the fourth week, I had recieved nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking this serious.

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them to the folowing adresses:

1-M Palmer Gilfach Goch,Blaenpenal,Aberystwyth
SY23 4TN ,United Kingdom

2-T.Toole box1138,Valemount B.C
Canada VOE-2ZO

3-Vitor Schlrder de Borba
Av Lucas de olivieira 2280 ap 404
90460-000 Porto Alegre/RS Brasil

4-Evert jan Benz
nijensteinheerd 58
9736 TD Groningen
Netherlands

5-J.J. Alles
RR 2 Site 81 Comp 6
Smithers, B.C.
V0J 2N0
Canada

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass
it along to someone you know who really needs the bucks, and see
what happens.
I've been perusing usenet for a few months now and I've seen these ads
appear very often. Like you, I thought that these postings were a
complete annoyance and a waste of time. But after reading dozens of them, I
decide 'For the sake of only 5 dollars I'll give it a try'. But the
reality is that it DOES work and you are guaranteed to receive large
sums of money, legally.
Make sure that you put your correct mailing address,
especially if you're from another country as some people have never sent
mail out of the country and might not know how. You may alter this
article
if necessary, editing what you need to edit.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

INSTRUCTIONS ON HOW TO POST USING NETSCAPE 3.0

1. Click on any newsgroup like you usually would, then click on
"TO:NEWS" in upper right hand corner. This will bring up a message box
to type this article in.

2. Leave the message box like it is, don't maximize it. In Subject
box type something flashy like "$$$CASH READ HERE$$$".

3. Tab once and you are ready to type in the body of the box. Retype this article but with your name inserted in slot #5 and the others moved up as I directed. Remember the #1 in this article will be removed in yours.

S. Pypke tells people to retype the article. This may not be necessary. Try this: highlight the article with a mouse (or click edit and click select all). Then, click edit, click copy. Then, go to notepad, or Word, or WordPad, or Wordperfect. Click paste. Save it from there. To post, highlight from notepad. Click copy. Go to the mail section to post, click paste. Go on from there. This will make it easier.

4. When you are done retyping this whole article with the proper changes, click on FILE in this message box (it is right above SEND). Click on SAVE AS under FILE (make sure your in the newsgroup message window, not where it says Netscape News) Save your file as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS!!! Once saved move to next step.

5. To post to at least 200 newsgroups do the following. You can post to more which will bring you more money but 200 is the bare minimum. Go to a newsgroup you want to post in. Click on "TO NEWS". Write your subject just like you did when you retypd this article. Hit tab once. Now click ATTACHMENT.
Another box comes up. Find your file where you saved it. Highlight the file and click "OPEN". Now click OK. If you did this right you should see the file name in the Attachments box in shaded letters.

6. NOW JUST CLICK SEND. Do this to at least 200 newsgroups (there are over 18,000) Each time it takes no more than 30 seconds so once you have retyped the article its easy.

INSRTRUCTIONS FOR EXPLORER

1. Holding down the left mouse button, highlight this article. Then press "CRTL" key and "C" at same time to copy this article.

2. Print this article for reference.

3. Go to Newsgroups and press "POST AN ARTICLE", a window will open. Type your headline in the subject area and click in the large window below.

4. Press "CRTL" and "V" and the article will be placed in the window. If you want to edit the article, do so and then highlight and copy it again. Now every time you want to post the article in a new newsgroup just do the "CRTL" and "V" command and press Post"

>
>
> SX122
General coverage 4 bands .538 to 34 mhz. 11 tubes, 1 diode, 1 watt audio
double conversion. Made '64 to '66 cost $295.00

The 390 is actually a better radio than the A model.

I am still looking for a schematic for a Fairbanks-Morse
number 9 chassis. Can anyone tell me which Ryder or Sams
I need? I want to fix it for a friend and also restore the
shortwave capability which was disabled by the FBI in 1942.
According to one message I received the FBI did a very
thorough job of disabling these radios owned by people
of German descent.
It's a short wave (or it was) and definitely a boatanchor.
Thanks and 73 gpewitt@execpc.com

Hello Guys:

Recently I had the good fortune of obtaining a very rare tube for my collection. The tube in question is the "Marconi FE-1", which I believe was produced in 1919 in Glace Bay, Nova Scotia. This tube was designed by the British Engineer...Captain HJ Round...who worked for Marconi.

In an article written by Gerald Tyne...the Tube historian, in 1965 he stated that he knew of only 2 of these tubes in existance..and he had only personally seen 1 of them . Both of these tubes were in major collections in the USA. This tube makes at least 3 known examples!!!

Does anyone out there know anything about this tube other than what I have listed above. I would like to research this subject further...and perhaps write an article for publication. I would also be interested in hearing from ANYONE who may have one of these tubes...or even anyone who has ever seen one...or knows someone who does have one!!

Any and all info on the Marconi FE-1 Tube will be greatly appreciated. Please help if you can.

Thanks...Regards...ROB.

Consider what it costs to send a boatanchor across country by UPS.
Joe buys a SuperCumberbun for 175 bucks, decides he wants to sell
one year later, and passes on the 70 dollar shipping costs, just to break
even on the deal. Not hard to see that if a particular radio passes
through
several hands, either the price is gonna soar, or someone gets hosed.

I love it as a buyer since it makes available to me things that I would
have never, ever, have
found in my limited (since I have kids) travels.

I have no problem paying someone a fair price for something, in fact, I
prefer it that way.

Hammarlund HQ 100 with clock. Recently cleaned up, all tubes replaced
(except rectifier), PS filter cap replaced with NOS.

Unit is in good condition, no damage or mods. Email for details.
$100 +UPS

I am still looking for a nice SX28 receiver for my
collection. The radio need not work, but I prefer a unit
that is complete and has a good front panel appearance.
If you have on gathering dust, I would love to give it a new
home where it will be used and appreciated!

598. Need help/schematic with Heath HD-1410 keyer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-19 00:00:00 UTC
From: kk5fe@communique.net
Message-ID: <5bseavlmr1@kiyoko.communique.net>
Source record: 123573

Hi all,
I have an HD-1410 electronic keyer that has problems. The dots work perfectly but the dashes go on for minutes before they shut off (sometimes they dont). But the wierd part is that if I touch the lead of my ohm meter to a ground point it shuts the tone off. If anyone can shed light on his or can send me a copy of the schematic (I will pay). please let me know.
Thanks,
Keith KK5FE

They say a fool and his money are soon parted. If you want to see some truly insane prices, check out "high end" audio products (stereophonic systems). Those nuts are willing to pay hundreds of dollars for the most bizarre "tweaks" to their systems, and then claim that their systems now produce "sweeter" (whatever that means) sound, all determined without instruments or double blind tests.

For example, among the products for sale to these folks are "hospital grade" power cords that sell for $449.00; "mpingo disks" made out of "mpingo" wood? (disks that are about the size of a quarter or half dollar, made of a dense wood) that you place in your room and supposedly change its accoustic character, and all kinds of other nonsense that would cause anyone with any kind of technical training to shake their heads in disbelief.

They have endless discussions of this stuff in their own usenet group, if you want to check it out. Anyway, if somebody is willing to pay $449 for a six foot 120 v.a.c. power cord, then a $350 price on an excellent condition, no longer made Ranger is not that bad.

Should I expect a flame or two from a "subjectivist audiophile"?

601. More R-390A questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-19 00:00:00 UTC
From: davidb@scn.org
Message-ID: <E48uDG.8o7@scn.org>
Source record: 123576

I managed to get a depot maintenance manual from Abe Nutkis in Jersey City, and have been studying both it and my R-390A.

I've pulled the AF subchassis (arbitrary first choice, it looked easy to remove, I plan on pulling and inspecting all of them) and looked under it. There's lots of cylindrical metal Sprague "Vitamin Q" capacitors under it (as well as some micas, ceramics, and one glass capacitor I noticed). Are these paper capacitors? If so, are they significantly more reliable than the infamous wax-paper or "Black Beauty" paper condensers? I typically replace all paper caps on sight as they've been no end of trouble for me, but then again the military could well have used something significantly better than the standard grade one sees in civilian electronics. (I'm not worried about the non-paper caps, with the exception of the electrolytics, which are going to get re-formed on a current-limited power supply before the set sees power.)

Also, I've been scanning for references to the gear assembly. I was hoping it was possible to remove it as a unit (mine is dirty and the tuning knobs take more force than I like to turn), but offhand I don't see much that indicates this. Just how much of a pain is this, and is there anything in particular I should watch out for? (I'm no whiz at mechanical repairs, but with sufficient time and perseverence I've managed to do things like dissassemble and repair the innards of pin-tumbler locks, so I'm not a hopeless klutz with tools either.)

The paint on most of the knobs is badly worn. What should I use to achieve an original-looking finish (all the R-390A's I've seen have badly worn paint on the knobs, so I don't have any idea what pristine ones look like)? How does one do a nice job of filling in the engraved white mark on each knob?

Source record: 123578

If you select a filter where none exists then you will not have any audio upon that selection. Someone tacked on a resistor in your B filter position but that is not a filter. This is allowing all of the first IF stage signal to reach the second IF module. You won't have much selectivity at B.

The AUX-7 option provides for VLF (very low frequency) reception. This requires a separate VLF antenna. Connect it to pin 7 of the accessories connector, the largest jones connector on the back of the rig. It is on the bottom row, 2nd vertical pin over from the edge. The plug, P/N: P-312-CCT, is pin-numbered inside the hood. I just bought one new for $3.00. The Drake owner's manual doesn't show the location of the pins and I didn't find a reference for Jones plugs in my ARRL Handbook.

The TR-7 cannot transmit VLF and Drake warns to remove the VLF connection before making any transmission. Also, the VLF antenna input bypasses some built-in antenna filters. Leaving the VLF antenna connected will result in degraded receiver performance on your other bands.

There should be no 10Kohm resistor on the IF selectivity board. All resistors on this board are 1/4 watt 5% carbon film. Values will be either 1.0K, 3.3K, or 3.9Kohms. The optional filter circuits are all identical so perhaps you could "borrow" a part from the unused filter location. The standard filter location is pretty close to identical...only has a few extra diodes and maybe one extra resistor. BTW, the standard filter for the TR-7 is the 2.3Kc SSB filter.

Enjoy,

The R-390A knobs are a problem to get a good finish on, apparently because of the alloy used to make them. I'd like to see some feedback on this, but I understand that to do a good job, it'll require using primers that are now EPA controlled and not readily available to the public. We used to be able to buy zinc chromate primer in a spray can for example, but no more.

Source record: 123581

I'm about to get back on the HF bands after many years of inactivity. And while I have gotten my radio ready, I will be intially restricted on the types and number of antennas I will have use of. Therefore, I am interested in getting a good antenna tuner that can handle 160-10 meters and is capable of handling 1000W CW output (2000W voice). The tuner needs to be able to support all different types of antenna connections, not just coax. I do not want an "automatic" tuner, but prefer the old-fashioned manual tuner, with meters and knobs. When I first got started in radio, Dentron and Drake made some good tuners, though I will consider all others. I will be working with a Dentron MLA-2500 amp and TS-820 HF rig. My choice of antennas will be varied.

I can be reached via e-mail at: jjweinb@mindspring.com.

> Just how much of a pain is this, and is
> there anything in particular I should watch out for?

Since I have had the dubious honor of removing the front panel and RF module of an R390A more times than I care to recall, I thought I would write a few random notes about the experience. I hope this is of some help. If you get into the disassembly of the RF module geartrain itself, that is another story entirely. This is all covered in the manual as well.

- It helps to support the radio chassis about 2" above the tabletop to allow the front panel to fold down onto the table gently without stressing the wiring harness too much.

- You'll need a Bristol spline wrench (available from McMaster-Carr, great place, no minimum order) and a *long* (~8") Phillips head screwdriver.

- In my opinion, the best first step if you are removing the RF module is to remove the VFO. First of all, turn the KC knob until "+000" shows on the counter. From the top of the radio, undo the connector on the RF module for the VFO and feed the cable and connector through the hole in the chassis. Turn the radio over and remove the spring on the coupler at the front of the VFO shaft (may be missing - if so, don't worry). Remove the two frontmost green headed screws holding in the VFO. Instead of removing the single green headed screw at the back of the VFO, remove the two normal screws holding the VFO bracket to the chassis itself (you'll see what I mean when you get there). These screws are not captive, so be sure to catch them when they are fully unscrewed. Now you can slide the VFO directly towards the back of the radio without losing the synchronization with the RF module. The center disk of the shaft coupler will be loose at this point - be sure not to lose it! Don't turn the VFO shaft more than about 1/8 turn. If you leave it unturned, it will slide back in again when you are done without needing any special synchronization (except tuning the RF module to +000 on the counter). If you do turn the shaft, you can always reset it if you have a frequency counter. The +000 setting corresponds to a VFO frequency of 2455 kc.

- Remove the front panel - the manual shows which screws to remove (eight large, five small, the MC, KC and ANT TRIM knobs and their panel bushings)

- Undo all the RF module screws (three on right outside face of chassis, two on vertical chassis divider just in front of the audio module, one on the front faceplate of the RF module, two in the very back of the RF module and finally two in the back of the Crystal Oscillator subchassis). Don't separate the RF module from the Xtal Oscillator subchassis. The RF module (along with the Xtal Osc subchassis) lifts directly upward to remove - make sure you are pulling on something solid, not one of the slug racks!

- To reinstall, reverse the procedure. Be careful not to damage the spring fingers on the chassis under the RF module. Reinstall the VFO with the counter on the RF module reading "+000", don't forget the Oldham coupler disk.

- When reinstalling the front panel, don't forget to install the panel bushings on the KC, MC and ANT TRIM shafts first. Make sure the ZERO ADJ mechanism is fully unscrewed (turn knob fully CCW)! Also, watch out for the position of the DIAL LOCK mechanism as you are positioning the panel. You may opt to loosen this mechanism and reposition it while installing the panel, if so, make sure you position it correctly again before tightening any of the front panel screws. Tighten all the screws, then tighten the panel bushings. I didn't tighten the bushings too much, since they tend to "walk" around the hole as you tighten them, putting sideways loading on the shafts. I made them finger tight + a *tiny* bit extra.

- You might want to double check that none of the wiring on the inside of the front panel is interfering with the counter. This is a sure way to screw up the painted numbers on the counter wheels. This is a particular problem if you have removed the black surround to the counter window - the wires need to be carefully tucked back into place as you reassemble the surround to the front panel.

- One source of tuning roughness can be the counter mechanism itself. On one R390A I disassembled, the small bevel gear at the right side of the counter was rubbing against the counter housing. Loosening the gear clamp and sliding it away from the housing a tiny amount made a big improvement in the smoothness of the kilocycle tuning.

> excellent condition, no longer made Ranger is not that bad.

You cannot apply logic and/or other technical criteria to pricing as it
also involves human factors like emotion. Look at any kind of collecting,
such as baseball cards, stamps or whatever.

Think of an example: when you were a child and your father was still
alive, he taught you how to copy CW while listening to some ancient
receiver, which is now extremely rare. You now decide that you REALLY
want to have one of these for nostalgic reasons. It is highly probable
that you will pay much more for it than it is "worth" to others as its
value to you is not only in its physical properties.

On the other hand, there may be quite a few of these receivers around,
and you also have limited funds, so there will tend to be a balance
struck in the marketplace. This will also tend to moderate the upward
spiral of prices as shipping costs over time add up (this was mentioned
in another post) as the person who paid a high shipping cost will tend
to not recover fully this cost.

Remember that when something is sold there is both a seller and a buyer,
and that a price is agreed to. If people are willing to spend $350 on some
old Ranger, then that really is what they are "worth" in the marketplace.
If you do not think yours is worth that much then you will tend to want to
sell it to someone who values it that much, and you can spend that $350
to buy something which you yourself feel is a good value.

The internet is only the medium, and better coverage can only help both
the buyers and sellers of everything. Use it to your advantage!

...Peter

Source record: 123585
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

Out of curiosity, is the Hallicrafters SX-122 receiver anything super-special? A unit with very clean cosmetics is being offered in my area at $225, which does not sound especially cheap, but maybe do-able if there is something exceptionally good about this set. I want the best possible sonics for my shortwave listening, and to date, the oft-recommended Collins R390/390a and Hammarlund HQ-180A have not turned up in my area.

Info regarding maintenance considerations (how many tubes, how fussy to fix?)of any of these sets would be welcomed. I have read that the R390 has a whole lot more tubes than the 390A, so if I go the Collins route, it'll almost certainly be with the -A for simplicity's sake!

614. Need help with Swan 350C

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-19 00:00:00 UTC
From: heimbach <heimbach@concentric.net>
Message-ID: <32E28285.75DD@concentric.net>
Source record: 123589

Several months ago, I picked up a Swan 350C. After recapping and aligning the transceiver and recapping the power supply, it is in fairly good working order. However, I still have a couple of problems and perhaps someone can help.

1) The S-meter works but reflects downward or from right to left. I've replaced the meter diode with no effect. The manual makes some mention of this, but it sure seems strange. Is this normal, or am I missing something?

2) I am unable to get a VX-2 VOX unit to work with CW. Works great with phone, but seems completely ignored for semi-breakin. What should I check? Been over the schematic and have tested continuity per manual.

Any replies are greatly appreciated.

Tnx... de Karl - W5QJ

I'm posting this as I'm not sure my outgoing e-mail is getting to the people who were kind enough to respond to my original post. In my original post back on the 8th of this month, I was looking for information pertaining to the R-1051 manuals, and in particular what level of maintenance manual was needed to service the frequency standard module (P/N 6625-078-4718).

To Michael Crestohl: Is there anything either in semiconductor or vacuum tube parts you're in need of?

To Bill Hoffman: I wouldn't mind having an extract from your RT-618 manual, as it might cover some changes a particular vintage R-1051 manual may lack. The two frequency standard modules in my possession do have some internal differences, even though they were produced by the same FSCM/CAGE vendor. Let me know if you got my reply - if not, I'll make a second attempt to send my address.

To J. Douglas Hensley: From some of your subsequent postings, it looks like you had some of your questions you sent me answered independently. Unfortunately I don't know of a source of rack mount sides...I'd think though that it'd be possible to build a set if one had some good metal bending skills. Let me know when you get your R-1051 up & running.

To Francesco Ledda: Unfortunately, I don't have anything in the way of R-1051 parts to offer (other than the frequency standard modules, which I've got uses planned for independent of an R-1051). Do your manual & schematic collections contain information specific to the frequency standard module?

Again, thanks to all who replied, and apologies for having to post this -

TGB

621. Re: Hallicrafters SX122?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-20 00:00:00 UTC
From: radio1@provide.net
Message-ID: <32e2cd57.2458749@news.provide.net>
Source record: 123507
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

Price is resonable for condition according to Hallicrafters book I have. Radio has controls setup similar to HQ-180. Was double conversion with 11 tubes. 3 bandwidths and one crystal filter. Made in mid sixties. Sold for $295.00 new. Hammarlund HQ-180 was triple conversion and better quality components. More tubes and was $429.00 new. Both are decent radios in this price range. Watch for problems with filter capacitors (60 cycle hum from speaker) and tuning mechanisms. Also check sensitivity on high frequencies.

Neither of these radios are in the league with R-390 for performance. Collins R-390A could go for up to $750.00 for a refurbished one with mechanical filters. R-390A still had 24 tubes and was heavy as hell. Originally sold for over $1400.00. With the price of tubes going through roof, might be cheaper in some cases to shell out the money up front for a Drake R-8.

I have an NCX1000 S/N 0089 that I am interested in having an estimate of it's value. I don't think that a large number were made as I have never seen any for sale, or any manuals or service info.

Please email if you have any info on the history of this model or possibly an idea of it's value.

I got a Hybrid (tube/transitor) Sansui Stereo receiver from my dad. The finals were of the tube type. It was purchased in the '60s. I think we got some sort of bargain on it because the all solid state units were just comming in. It never seemed to work very well even when it was new.

In the '80s I decided to replace it with a new unit. This seemed to give much better sound through the same speakers. I friend of mine, who knew a lot more than I did about audio equipment told me that someone might want to buy the unit for a lot of money. I though he was kidding me. Maybe not.

Anyway I think it went out with the garbage.

It's been said before, and it'll be said again. Stuff is worth exactly what a willing buyer and seller are able to agree on. No more, no less. That goes for boatanchors, other collectables, silly audio tweaks, art and a whole lot of other stuff.

I think the real reason some get a bit upset at today's prices is that just a few short years ago, almost all of this stuff was available dirt cheap. That's all changed now. On the other hand, a few years ago you'd have been hard pressed to scare up an AM contact. Now, it's relatively easy. All things considered, I think the minor boatanchor boom is a good thing. And given the quality of some of this stuff (especially some receivers) the argument could be made that a lot of boatanchors have been severely underpriced for years and are finally, once again, returning to their true value.

>For example, among the products for sale to these folks are "hospital
>grade" power cords that sell for $449.00;

Pardon the aside here, but funny you should bring this up. I admit to being an audio nut. A short time ago, while auditioning some other equipment, a salesman absolutely *insisted* I take one of these gems home to try. I smirked, and made fun of it, but he insisted. I'm almost embarrased to say I tried it out on several amps. It was beautifully packaged, and the cord itself was a work of art. Flooby dust, but pretty flooby dust. It, of course, made no difference in the system's sound, but it *was* pretty. I returned it to the dealer a week later with the same smirk on my face.

>They have endless discussions of this stuff in their own usenet group,
>if you want to check it out.

Actually, assuming you're referring to rec.audio.high-end, the group is pretty well dominated by engineering types who are, by and large, remarkably common sense folks who delight in de-bunking this kind of garbage. Despite some of the silliness out there, high-end audio does not necessarily equate to nonsense.

> Anyway, if somebody is willing to pay
>$449 for a six foot 120 v.a.c. power cord, then a $350 price on an

I trolled the BA email list for opinions for the following question,
so now I'd like to hear views from you folks.

I've got a Galaxy GT-550 that runs two 6LB6's in parallel. I never
run over 50W (honest!), so rather than having both 6LB6's idling
along, I was thinking of removing one of them (to keep as a spare).
But in doing so I'm afraid of creating some imbalance.

One person already warned me that the B+ might shoot up; in testing
that claim I might end up damaging the remaining tube.

Has anyone tried this on any other rig? Opinions? Warnings?

Also, is there a (cheaper) replacement for the 6LB6?

73 from chilly Hawaii (got down to 60 last night - brrrrr),

Just picked up this 70's vintage HF receiver. Need operator and service manuals for it. Does anyone have any experience with this radio? It has a mode switch which includes USB-CW and LSB positions, but the radio is ominously silent in these settings. Does it have a built in BFO or does it require an external one? Has input on back labled "BC". What is this for? Also has user installed switchable audio filter which makes audio sound like sonar returns (for you old STs out there.) Don't know if this is a real mod or home brew. Any help will be appreciated.
If you have manuals, email me with price for photo copying or purchase.
Thanks and 73
Max N1KGS

Another alternative are the paint sticks that AES sells. They have them in white, red, and I think either gold or silver. You just rub that over the engraving and wipe away the excess with a rag. Worked very well for the knobs on my HQ-180.

I've been working on a output tube substitution for a Drake TR4 so I've had
a chance to delve into a related topic. Here are my observations:

1. Some rigs have weird series/parallel arrangements for filament voltage,
because they were designed to allow for 12V mobile operations but are filled
with a mix of 6V and 12V tubes. If one tube is removed (open filament) the
filament voltage on others can go too high. Check this and put a power
resistor in place of the removed tube's filament if it is a risk with your
radio. This is a critical factor to work out ahead of time.

2. Total final input capacitance will change. This could throw off the
preselect/tune control settings slightly. You can compensate by putting a
small capacitor between the removed grid and ground to simulate Cin for
the removed tube.

3. The idling bias current should be adjusted for half of the original value
because only one tube is idling.

4. The output impedance of the final - to - tank circuit interface will be
upset, which will at least alter the final tune-up settings (plate & load).

5. Neutralization will probably be upset, so you'll need to check the results
of that setting.

6. I wouldn't worry about B+ - the circuit will be designed to survive highest
B+ at zero or low idling plate current. Altho the remaining tube will see
higher B+ at full plate current than normal, you've already said you'll adjust
for less than full output (from the remaining tube...) so I doubt plate
dissipation would be exceeded on the remaining tube. As for screen voltage,
that should be regulated already by a 0B2 type gas regulator tube so I don't
think it will change for the active remaining tube.

You _might_ consider as an alternative just removing (grounding) screen voltage connection at one of the tubes, which should drive it's plate current to zero. Then re-adjust idling current and see what happens. Altho the remaining tube would have it's filament lit, it wouldn't be subject to much emission life depletion at zero plate current. At least this might be an experiment to run before you do any more major surgery.

Another alternative might be to find a dead 6LB6 or a pair of very weak ones and use them instead.

644. Dow Key Relays

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-20 00:00:00 UTC
From: kc5egg@ix.netcom.com
Message-ID: <5c0rta$2be@sjx-ixn6.ix.netcom.com>
Source record: 123530

I have been deluged with requests for Dow Key relays. Since I
have never posted an offer of such things for sale I am confused.
I was told by one requester that it had appeared in this news group.
I assure you I did not post it if it did. I have no idea what
the offer price was but I assume it was much too low based on
the response. Please if anyone else writes to me on this subject
include a copy of whatever got posted and where it was posted.
I am at a loss and do not intend to sell anything until I know
what the heck is going on.

I did offer one relay via private email for a good deal less than
I paid for it perhaps someone would be so kind as to put a value
on used Dow Keys for me. Specs. are 117V 3xSO-239 1ea. DPDTDB relay
external. Thanks for any help.

Jerry

645. Dow Keys More = Less

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-20 00:00:00 UTC

Message-ID: <5c0utr$bsa@sjx-ixn10.ix.netcom.com>
Source record: 123531

More mail arrives. Now I deduce there is a boat anchor reflector and my private email to an individual has ended up posed there. This tears it. As of now I have no Dow Keys relays for sale. If anyone has written asking for one or more sorry I am not selling at this time. I tried to do someone a favor and my private corespondence is posted net wide, without my knowledge or consent.

You guessed it I am annoyed. If you are disapointed take it up with the fellow who made my private corespondence public. I would appreciate inforamtion on the reflector so I can set the record straight. No Dow Keys right now sorry maybe some other time.

646. Need help with Swan 350C transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-20 00:00:00 UTC
From: heimbach <heimbach@concentric.net>
Message-ID: <32E38E7A.C1@concentric.net>
Source record: 123532
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Last October, I picked up a fairly clean Swan 350C. After recapping it and the power supply and aligning the rig, all seems well. However, I have two problems as of yet unresolved and hope someone with one of the beasts can steer me in the right direction. Here goes:

1) The S-meter deflects right to left (downscale). I've replaced the diode and check resistances in the bridge. I have a copy of a manual for a Swan 350 and it mentions something about this, but sure seems strange. Any ideas?

2) I can't seem to get semi-breakin CW with the VX-2 Vox unit. Works fine on phone though. No mention in the manual about semi-breakin. Is it possible in an unmodified radio or am I missing something?

Any help will be greatly appreciated.

Tnx... de Karl - W5QJ

Source record: 123536
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.audio.tubes,rec.radio.amateur.boatanchors

This is just a stab in the dark, but I was reading something about early tube radio transmitting, and it talked about Marconi tubes being used in transmitters in the teens and 20's. The tubes in question were large, there is a picture of one being demonstratiod, it was at least 16 - 20inches tall and probably 8 in across in the middle, kind of bulb shaped in the middle with a narrow neck. I believe that it was a diode or triode.

I hope that helps to at least steer you in the right direction.

Jeremy

Many thanks for the feedback; I have spent some time restoring my own vintage hifi gear, and am very cautious about taking on a real money pit of a project, hence the interest in the number of tubes in the radio!! I already own a Lowe HF150 and like it a lot, but had been lead to believe that the best of the boatanchors offered better sonics, hence the interest in a boatanchor.

Hi all,

I have an RME Communications DB-23 Ham Band receiver pre-amp. It's in the neatest little cabinet that's just waiting to be a home brew Transceiver. However, if this is something of value I would hate gut it out and destroy it's original state. Especially because it still works.

So if anybody can give me some good advice as to what to do, please e-mail me at the address below. I don't regular have the time to read the newsgroups so posting here will not help me.

Thank you for reading this and special thanks to those that reply.

I've just aquired a Marconi CSR-5 Rx. 80khz-30 megs. Been in somebodys basement for the last 5 years & despite a moderate amount of rust, dead bugs & general grunge it actually works very well.

Does anybody know the history of these sets, Who used them etc.?

Also, can anybody recommend a safe way to clean said dead bugs & grunge off without messing up the silk screening on the chassis?

Thanks for any info-

I am still searching for my SX28 receiver!
Looking for a receiver with good cosmetic
frontpanel, and cabinet. The radio needn't
work -- willing and able to do electronic
restoration -- not body work!!

I have seen these going on here for all sorts
of prices. One fellow in California let one go
last weekend for $125, with cabinet, because
it had a burnt resistor. If your radio is gold plated
with an inflated price to match, don't bother
answering this post -- I can't afford the high-end
market prices.

I am a collector and not a dealer. The radio is
for my personal collection, and enjoyment!

>it require an external one?

It has a built-in BFO. However tuning on the SSB positions is very
critical. The original ceramic IF filter is much to wide for good
SSB/CW operation.

I had one (later stolen) in which I replaced the original IF filter
with a Murata ceramic filter obtained from Gilfer Associates in N.J.
It greatly improved reception in all modes. The original IF bandwidth
was so wide that the AGC would "pump" with strong signals.

> Has input on back labled "BC". What is this
>for?

My memory is dim on this.
I'll look to see if I still have a manual.
I might have tossed it after my receiver was stolen (burglary).
It might have been an aux antenna input for the AM broadcast
band

> Also has user installed switchable audio filter which makes audio
>sound like sonar returns (for you old STs out there.) Don't know if this
>is a real mod or home brew.

Sounds like a Mickey Moused home brew.

Good luck,
Doug

FROM: "Your_Name" <login@themall.net>
SUBJECT: Find out here about those get rich quick schemes
DATE: 20 Jan 1997 19:40:07 GMT

YES THATS RIGHT!!!, just try this and see what happens. I cant hurt to try.
Just take a few minutes to read how this can make your LIFE so much EASIER with a $5 investment. Ever wondered how those get rich by mail things work, well read on and find out.

I was once a doubting Thomas also, one who never thought any of those schemes worked or where even legal. But after hearing so much about it and all those testimonials I thought HEY, WHY NOT TRY! And I did. After 2 week I received several thousand dollars. After four weeks my local mailman suggested if I am going to expect such a volume of mail I should open a post office box, A LARGE ONE! Now with the Internet this money making idea gets even better. Why do you see so many of these get rich quick messages on the Internet? IT REALLY WORKS. Besides whats $5, Consider it an investment. Take this advice, if it doesn't recover your time and money, don't try it again.

Testimonials from others who have tried this idea have reported FANTASIC results. Markus Valppu says he made $53,664 doing this, Dan Stepstone made $17,000 in this perfectly legal and simple plan.

HOW DO I DO THIS?

Step #1)
Invest your $5 by writing your name and address on five colored pieces of paper along with this statement; " Please put me on your mailing list". In this way you are not just sending on dollar to someone, you are paying for a service, legitimately. Fold the $1 and insert in the piece of paper so that it can not be see through the envelope(so that nosy people don't see the money and liberate it, if you know what I mean). Mail the envelopes to the following address and WAIT FOR THE $$$.

#1) Chad Collier
2785 Cold Springs Rd, #49
Placerville, CA 95667, US

#2) Steve Boltinhouse
1009 Bird St.

Hannibal, MO 63401, US

#3) Eugene Safronov
1682 Kalakana Ave., #102
Honolulu, HI 96826, US

#4) Rob Sharp
23411 Summerfield, 21-H
Aliso Viejo, CA 92656

#5) Bob Dacker
208 Seneca St.
Ronkonkoma NY 11779

STEP#2

No here is how you get paid. Where the investment pays off. Where the $$ comes home! Now remove the top name from the list (#1) and move all other names up one (#2 become #1, #3 become #2, #4 becomes #3, and #5 becomes #4) then add your name and address as the new number 5. You can personalize your article if you chose or you can just use this one.

STEP#3
Now post this article with you new names and address to as many newsgroups as possible. There are at least 19000 newsgroups at any one time, take advantage of this. REMEMBER, the more expose you get, the more money you will earn!

STEP#4
Be imaginative, try other avenues for distributing your lists. If you have a web site, even buy mailing lists. It is important to remember that the more exposure you get the more returns you can expect. The golden rule in direct marketing is exposure. If you only get responses from 1% and in turn 1% from their mailings and so on, you can see where they money comes.

HOW IT WORKS

Out of every block of posts I made, I got back 5 responses. Yes that's right FIVE. With your name at number 5 you make your investment back.

Each additional person who sent you $1 will also make 250 additional postings with your name at #4 , 1000 posting will now earn you $50!!!

Now these 50 people will make 250 postings each with your name at #3 or 10,000 postings. 5,000 return = $5000 in CASH.

Finally, 5000 people make postings with your name at Number 1 and you get a return of $60,000 before your name drops off the list. Next step try it again, and again. You are only limited by your imagination.

FINAL THOUGHT

In order for this system to work and remain legal, you have to follow the steps and send your $5. Honesty is always the best policy. Good luck, have fun and make some serious money!!!!!

Proof:
This arraignment does not constitute a "chain letter" under US Title 18
Code section1302. Because you are purchasing a service.

Ugh. I should have realized this myself, given that they are an
aluminum alloy. Chromates are very nasty things; I can't get all that
mad at the EPA for making them nearly impossible to get.

>>How does one do a nice job of filling in the engraved white mark on each

>A small brush and a very steady hand. ;-)

Well, there's not much reason to repaint the white line if I'm not
repainting the black knob.

673. Collins 618T HF

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-21 00:00:00 UTC
From: tobyhuff@ix.netcom.com
Message-ID: <853858915.18285@dejanews.com>
Source record: 123461
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Can anyone with Collins 618T experience help me? I (as a member of
Colorado Civil Air Patrol) have installed a Collins 618T into an ambulance
[used as a mobile command post] for disaster response preparedness. The
radio was taken from a USAF MRC-108 communications central. The entire
MRC-108 radio package was installed in the ambulance, sans radio
"coffins". The UHF/AM and VHF/AM radios work perfectly. The problem is
the Collins HF. Receive mode works fine; the antenna coupler aligns to
the frequency selected, albeit a bit slowly. However, there is
no transmit, and the meter on the R/T does not show 1500 Volts. I've
tried 3 different R/T's, 4 different 1500V power supplies, the equipment
rack and wiring twice, and the control head twice. It acts like an open
interlock, but the blower interlocks have been bypassed, and I know of no
others. The only thing not swapped out as yet is the antenna coupler, and
I doubted if that was the problem. Has anyone using the Collins 618T had
this problem? Any help or suggestions would be welcome!

Source record: 123462

I'm looking to buy a Lafayette shortwave receiver, model BCR-101. This is a mid-70's analog solid state set apparently intended to compete with the Realistic DX-160. Has a vertical drum dial and built-in front-facing speaker. This set was marketed during the decline of Lafayette, after their long line of HA-XXX series ham and shortwave sets.

Am very interested in this receiver and can swap for classic 1930's - 1960's sets (even an SW-3!), or buy outright for a cash money order.

I've read that an excellent lubricant for R390A mechanisms is one of the synthetic automatic transmission fluids. Since they are silicone based, they won't dry out and gum up in a few years like the petroleum based lubricants do.

That is an excellent question. I have always assumed the nice
hermetically sealed capacitors were perfectly sealed and would not
start to leak like the cheaper caps. The only way to tell is to
actually measure them. I havent done so but probably will the next
time I pull that module.

>Also, I've been scanning for references to the gear assembly. I was

>pin-tumbler locks, so I'm not a hopeless klutz with tools either.)

It is not a big pain as you can fix most of the binding problems
without taking out the whole RF and gear subchassis. Most of the
binding I've seen is caused by old hardened grease on the coil slug
racks. Each rack has 2 to 4 rollers. The rollers typically get
gunked up with old grease and refuse to turn at all. That reduces
them to sliding up the brass cam ramps, which adds a great deal of
friction.

You can remove each coil rack by unhooking the two long springs
holding down each one. Then they lift off, and you can bathe the

rollers in some gentle solvent to get all the gunk out. Take care to not crack the coil slugs. With the rack out you can get the grease off the roller tracks with a cloth, some q-tips and some solvent.

The coil racks can also bind if the coil slugs are not centered over the coil form. Over time the coil form may have drifted a little biut in position. To compensate, each slug has two mounting screws with oversize holes. If you have a rubbing coil slug, you can loosen the two screws, run the dial down-frequency to lower the slug all the way and then carefully retighten the screws with the coil slug centered. This probably wont affect the alignment much if at all.

The racks and cams come lubed with a thick grease, which may have been the best choice for military environments. IMHO a thick oil, like basic 30-40 weight is a better choice on the rollers for typical hobby use. A real mechanical engineer may have a better opinion.

>The paint on most of the knobs is badly worn. What should I use to
>achieve an original-looking finish (all the R-390A's I've seen have
>badly worn paint on the knobs, so I don't have any idea what pristine
>ones look like)? How does one do a nice job of filling in the
>engraved white mark on each knob?

I has good luck with a power wire brush wheel to get the stuff off (made a big pile of black powder though). Then two coats of satin black spray paint. The standard white "Lacquer-Stik" worked well to fill in the engraved mark. The original probably had a tougher white paint.

From: rstevens@voicenet.com
Message-ID: <5c2u8q$fgf@news1.voicenet.com>
Source record: 123474

Got one of the Sears-labelled FRG-7's here--your silent LSB/USB-CW problem is, for me, usually always a dirty function switch that a little De-Oxit spray job fixes, no problem. That, or just beat piss out of the switch by rotating it a number of times. Seem that the BFO (which is rarely mentioned in light of the receiver's overall excellent frequency stability) drifts like a bitch until it warms up--like a half of an hour or so--and may be hard to start when the switch is grunged up. How's that for a technical discussion?

BC is, I believe, the separate broadcast antenna input connector--just jumper it to the main connector if you use a single antenna, eoither through the connector strip or through the SO-239. I use a Select-Antenna tunable loop, with the external wire connection option, and it works like a champ. The FRG could have used a ferrite loop antenna for broadcast use--no question.

I also added a grain-of-wheat 12-volt bulb behind the S-meter for illumination--really brightens up the display. Kind of a corny but a nice thing.

Yes, the stock filter is no good for SSB, and marginal for serious SW DXing, but great for clear channel listening, either BCB or loud SW. Mine came with an optional (yellow plastic, in my case) 3.something kHz filter, but after swapping back and forth so many times I had to repair the pc board (not too durable in the first place), I stuck with the stock (I think it's a 6 kHz) filter for the better high frequency response, relying on the audio filter switch to reduce heterodyne interference.

I stuck an ANC-4 (from JPS) on there, since it sits right next to this computer, but there is SO much local noise, that now I just use the ANC-4 as an active antenna for night-time BBC listening, and it's great for that. Part of my problem is a big halogen lamp with a built-in dimmer--say no more.

I love the thing--it is still one of the best buys out there in a tabletop that can run on batteries in a pinch. The built-in speaker has amazing sound for it's diminutive size.

And the black case Sears stuck on it is much cooler than the Yaesu's grey case, if I do say so myself.

I'd open it up, and clean all the switches with De-Oxit before I'd do anything else.

691. Kenwood TS-520 for $125

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-21 00:00:00 UTC
From: w5kft@nts-online.net
Message-ID: <5c3cva$3j7@news.nts-online.net>
Source record: 123479
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

I have a Kenwood TS-520 transciever that has started blowing fuses
when it is turned on. I don't want to mess with fixing it, will sell
it as is for $125 plus shipping. This will make somebody a good cheap

fixer supper.

692. Stromberg Carlson M 1235 Schematic

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-21 00:00:00 UTC
From: Robert Pelz <pelzr@alaska.net>
Message-ID: <32E52452.686E@alaska.net>
Source record: 123480

I'm looking for a circuit diagram for a 15 tube Stromberg Carlson,
model 1235 series 10, AM FM SW radio. Its ca. 1947 and has connections
for a wire recorder in the back.
I'm trying to get this radio to work and a circuit diagram would be a
great help.

Thanks,

Bob KL7WS Anchorage, Alaska

693. Help ....

Newsgroup: rec.radio.amateur.boatanchors

Help.......

A group of friends and me have an idea about conecting two computer
using a radio transmisor. These computer should be 500 meters away (max.)

We have some doubts about it because we're beginners dealing with
transmisors.

1.- What transmisors type we should use?
Which bands and which frecuences?

2.- what's the way we can send the signal from the serial port, and
paralel port, or from the modem output to the radio transmisor?

Please, any information about this stuff will be welcome.
We'll post the final this experiment's final result.

Send your answers to:

As a non-ham, but with ham siblings, I'm treading on thin ice, but
here goes:

The grid and plate tank circuits, plus the neutralizing caps, were set
up for the impedance of two tubes. If you are lucky, the grid and
plate tanks will have enough range to compensate. It's a bit less
likely that the neutralizing cap will have enough range.

You could leave the second tube in the socket, but with no screen
voltage. The problem with that is some cathodes get "tired" when run
at no plate current. Allegedly a layer of nickel oxide forms which
can insulate the cathode coating from the cathode itself.

Also, don't try running the second tube without the plate cap. The
screen current will go astronomical and melt the screen in a few
seconds.

Best to just run the pair of tubes. If you really are running them so
conservatively they should last a long time.

Hi Folks! Shaun makes pretty bold statements above, and I just want to say that they are true.

Recently, I aquired an R-390A Users Manual and a Hammarlund HQ-180 users manual from him. When I opened the package, I thought he accidently sent me his original R-390A Users Manual. The quality is THAT good. The HQ-180 manual was also spectacular. In fact, reprint is a better description of the quality of these manuals rather than copy.

The only connection I have with Shaun is that of satisfied customer. Well, I'd also like for him to do well so he can offer some other manuals I'd like to see in the quality he offers.

Thanks and 73,
Ben

Greetings,

I am looking to add a signal generator and an audio generator to my test bench. I am looking for a clean unit with manual that would have a fairly wide range for general purpose use. A digital readout would be nice, but a fairly accurate dial would probably do. I would also prefer something with an adjustable calibrated output, but I have an open mind as too what I will condsider for purchase.

If you have something you feel I might be interested in, please Email me at my personal mailbox rather then posting it to this newsgroup. This assures that I will see your message!

Please state equipment model, price, and condition with any other relevent information. I promise I will respond to all email I receive.

Thank You for taking the time to Read and reply to my message.

Try putting a sizable ground from ambulance body to the rack that
holds the receiver/exciter and expecially the pa/coupler. Without
the ground on the pa/coupler rack there will be no output.

Hello All,

I'm the one that wrote the message yesterday to the newsgroup that I planned to gut this thing and use it for a QRP project.

I have received quite a number of messages about this. First I like to say to those that seemed to think I had no sympathy toward it's historical appeal. If that were true, it would be laying in pieces on my workbench now and you would never have heard about it at all!

So, as I'm not in the hobby of preserving rigs and assessories of the past and you guys are. I offer it up for sale. Several years ago I used it and it worked with my DX-160 SW receiver. I just plugged it in and all the tubes lit so I assume it still works. I would say it is in good to excellent condition. There is a small minor scratch on the top. I'm told these are worth about $50.00

Bids will be taken until this Friday so everyone gets a shoot. Please send your bid to the email address below.

Thank you for your time and consideration. I really would like to see this go to caring hands since it appears to have historical meaning.

When I switch to the AM position, the meter needle pegs quite violently.
There are no obvious bad components, & tubes check out ok. CW works fine.
On a cold start in AM I might get 5 or 10 seconds before the offending
component heats up and fails. Any suggestions?

719. Re: Straight key info wanted

John,

You're right, you have a polechanger key, made for Western Union by Spies. I collect keys, and have one like yours, but I don't know much about Spies and I'm not sure anybody else does either. Neal McEwen or Greg Raven may be able to help (see below). The date stamp on the bottom is interesting. I haven't seen one of those on a Spies.

You *probably* should not consult Dave Ingram on matters like this. He says in the caption to Fig. 4-7 of "Keys, Keys, Keys", which is a picture
of a polechanger key:

"This Western Union key was used by field servicemen or pole changers."

:-) :-) :-)

That's one of the funniest of the *many* errors in Keys, Keys, Keys. Experienced key collectors tend to either laugh a lot or grit their teeth a lot when they read Dave's stuff. The pictures are nice, just don't take the text too seriously

For a wealth of (accurate) information on telegraphy and keys, take a look
at "The Telegraph Office" maintained by Neal McEwen, K5RW. The URL is:

http://fohnix.metronet.com/~nmcewen/techno_weenies.html

Follow the links to Greg Raven's landline telegraphy page, Tom Perera's virtual key and instrument museum, and even my own Vibroplex Collector's page,
not to mention several others.

Jeff- -An RTTY TU would work, but there's an easier way. Build an active filter, tuned to your favorite audio frequency for listening to CW, and feed its output to the base of an NPN transistor. Use a series diode to rectify the audio and a cap to smooth the DC a bit. The emitter of the transistor goes to gnd, and the collector to one terminal on the sounder. The other sounder terminal goes to whatever + voltage required to smartly pull the sounder bar down. Connect a snubber diode across the sounder coil to quench the voltage on release.

I built just such a circuit several years ago. Used the output to trigger an audio oscillator. This gives the advantage of hearing nice clean CW with most of the QRM removed. If you make the bandwidth of the active filter very narrow, noise and other stuff won't trigger the sounder.

E-mail me if you'd like the circuit.

>

See below about the resistor...

>The AUX-7 option provides for VLF (very low frequency) reception.

The AUX board is not necessary for VLF reception. The AUX board allows you to transmit in 500KHz segments of the band that were not available in the original 6 amateur bands on the radio. It also allows you to select any of the 500KHz segment through a know selection, rather than the up/down buttons.

>edge. The plug, P/N: P-312-CCT, is pin-numbered inside the hood.
>I just bought one new for $3.00. The Drake owner's manual doesn't

You can find these plugs at some flea markets too.

>from the unused filter location. The standard filter location is
>pretty close to identical...only has a few extra diodes and maybe
>one extra resistor. BTW, the standard filter for the TR-7 is the
>2.3Kc SSB filter.

Although there are none of these resistors on the board, a common trick for those who wanted AM bandwidth without buying a filter was to jumper the filter with a resistor.

In installing the filters, I at first found it difficult to remember which on was where. I have standardized the filter locations in my TR7s as follows:

A - Am
B - ssB
C - Cw

This works well when you want to progressively narrow your bandwidth, as the filters are "gray coded".

Ed K1EP

I need:

R390-A receiver
R-1155 receiver
T-1154 transmitter
AR-88 receiver
R-109 receiver
AN-GRC-109 transmitter

TV7-D/U tube tester

Any good newer style tube tester that can do the
compactrons etc.

Any good transmitting tube tester.
Such as Hickok, B&K Heath etc.

A Grid Dip Oscillator

PI-WOUND RF chokes such as 2.5 mH at 200mA or better.
Also need some smaller ones.

Any good transmitting tube tester.
Such as Hickok, B&K Heath etc.

Tube socket Adapter kit for I-177B tube tester

Greenlee punches - all types & sizes needed.

ANY BOOKS from 1930-1970 about ham radio construction.
Tube manuals, etc.

QTY of TWO or FOUR: 7-pin sockets for 1625 tubes

807 tubes
811A tubes
572B or similar tubes

1 watt and 2 watt resistors,

FT-243 crystals for 3500 - 3600 kHz & 7000 - 7150 kHz

PL-259 / SO-239 connectors

Capacitors: MICA, MYLAR, Electrolytic etc.

Any useful AF/RF tubes...

Audio transformers.
Interstage transformers, Single anded and P-P Output transformers

Modulation transformers

"MULTI-MATCH" Modulation transformer in the 100 watt to
500 watt class.

Old tube equipment, chassis, carcasses etc.

SO-239 and PL-259 connectors

Older AM and CW transmitters and/or receivers.

Homebrew radio transmitters

Desk microphone - dynamic preferred.

Any straight key.

A BUG

I would like to swap for any of the above items.

WHAT DO YOU HAVE??
MAKE ME AN OFFER!!

739. Eddystone S680X parts needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-23 00:00:00 UTC
From: Mark Glusker <glusk@sgi.com>
Message-ID: <32E7BEED.41C6@sgi.com>
Source record: 123427
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I have recently acquired an Eddystone S680X. Unfortunately, the original dial face has been replaced with a reproduction that is not even close to the original.

The fabulous Eddystone dial is the most distinctive feature of this radio. I intend to contact the Eddystone User's Group, but any further help in locating an original dial face would be greatly appreciated! I can pay in British pounds if needed.

Many thanks,

Mark Glusker, glusk@sgi.com

740. Trade 2M/440 for BA

Newsgroup: rec.radio.amateur.boatanchors

From: Carl Yaffey <cyaffey@sprynet.com>
Message-ID: <01bc0958$71198080$afadaec7@bigmon>
Source record: 123428

I would like to trade my Alinco 2M/440 DR600T + duplexer for a nice BA. I would be most interested in a Viking Valiant or Ranger. But, I think it would also be interesting to see what somebody might offer. National? Drake? Hallicrafters? So, watcha got?
The Alinco has been "blessed" by the Alinco folks and it cost $650 new with the duplexer. It's in fine shape, and I would like to trade for something(s) worth around $350....

741. Dallas ARC Annual Auction

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-23 00:00:00 UTC
From: Jay Miller <jmiller@teleteam.com>
Message-ID: <32E7C5F5.7C80@teleteam.com>
Source record: 123429

To those in the Dallas-Fort Worth area I'd like to remind you of the Dallas Amateur Radio Club's annual benefit ham gear auction on Wednesday night, February 5.

Set-up begins at 5:30pm with the gavel going down at 7:00 sharp. Location is the club's regular meeting place at Wyatt's Cafeterial, S.W. corner of Marsh and Forest Lanes in Dallas.

Any type of ham-related gear is welcome. A 10% commission will be deducted for each sale to benefit the DARC. Gear may also be donated to the club for auction.

For more information, please call Glen Kitto, KC5WBQ at 972-383-7507 (e-mail Gkitto@teleteam.com) or Bob Peters, K1JNN at 972-288-0484 (e-mail soundimp@intex.net).

743. question re commercial conversions of mil BAs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-23 00:00:00 UTC
From: boeing377@aol.com
Message-ID: <19970123190400.OAA09448@ladder01.news.aol.com>
Source record: 123431

When I was a kid working on my father's commercial fishing boat I saw quite a few commercial conversions of BAs in the fleet such as APN 4 and APN 9 Loran A, TCS, BC 191, BC 375 etc. Sometimes the units were repainted grey or green to look less like mil surplus gear. The xmtrs were usually xtal controlled but never type approved. FCC inspectors were afraid to hassle the fishermen most of whom looked pretty mean and would tell them "the captain's not here and I can't let you on the boat". The most extensive mil BA conversion I saw was a BC 433 ADF (radio compass) in which the control head had a professionally re-screened dial face showing extended frequency coverage up to 3 mc (the original top limit was 1750 kc). I figure there was a W6 somehwere behind this project which reportedly came out of either San Diego or Morro Bay CA. Anybody else remember this gear or have more info?

On Thu, 23 Jan 1997, Ed Parish wrote:

> The AUX board is not necessary for VLF reception.

Here's what R.L.Drake advertised on the TR-7, copyright 1978:
"The TR-7/DR-7 provides reception from 1.5 thru 30 MHz continuously,
and zero thru 30MHz continuously with the optional AUX-7 Range Program
Board." My TR-7 is in accordance with the original Drake specification.
If I remove the AUX-7 board the VLF receive capability goes away with it.

> Although there are none of these resistors on the board, a common trick for
> those who wanted AM bandwidth without buying a filter was to jumper the
> filter with a resistor.

Sorry, I will never hack this fine instrument with common tricks. The
price for a filter in 1978 was $49 each and that's about the going price
for a used TR-7 filter today.

>In installing the filters, I at first found it difficult to remember
>which on was where. I have standardized the filter locations in my TR7s
>as follows:
> A - Am
> B - ssB
> C - Cw
> This works well when you want to progressively narrow your bandwidth, as
> the filters are "gray coded".

The Gray code is a binary data coding scheme where the difference between
two adjacent code words is one bit location. The decimal values
0,1,2,3,4,5 in Gray code would be 000,001,011,010,110,111. Where this is
most often applied is in support of control systems using stepping motors.
Gray code has also been applied in Digital-to-Analog converters. On my
TR-7 the filter selection switches work thusly: A: 300Hz CW, B: 6KHz AM,
C: 500Hz CW, and None Selected: 2.3KHz SSB. I have 4 genuine filters.

Took a look at the schematic last night so am going from memory. Might want to try V5, V6 and V7 even if they test OK, Have you tried turning down the zero adjust pot. which is located next to the power xformer? Could also be an open zero adjust pot. or I think there is a by pass resistor across the meter that might be open. Does the meter go to zero in CW mode? Based on you comment I am guessing the meter is OK in CW.

BTW I added a Dovetron product detector and am very happy with it. It turned the A2 into a reasonable SSB receiver and the mods are easily reversable. Audio quality is excellent.

You may want to check your AVC line and all components. That means excessive voltage on the line. Check all your bypass caps, resistor values, etc that is associated with the circuit. Also check the mode switch as that has a tendency to have funny results on the avc. Let me know how y'are doin. Cal, N6KYR. P.S. Why do I know these things? Just got done restoring a 75-A2.

From: res@cmprime.cis.att.com
Message-ID: <5cb3ta$jnp@anchor.cis.att.com>
Source record: 123346

Most new, graphical newsreaders (Netscape) don't have kill file capabilities like the older Unix-based text-type newsreaders, such as "tin".

With tin, I am able to set key words from the Subject: line into a kill file and I won't see articles with those key words in them. Because, in this newsgroup, I am primarily interested in technical info, and discussions BETWEEN users on interesting topics. I am not interested in buying, selling, etc. Thats what rec.radio.swap is for. So in my kill file I have included: WTB, Wanted, sale, need, $, trade.

This afternoon I logged in, and saw there were 5 new articles, but when I entered the newsgroup (meaning the kill file took effect) there was only one article to read (regarding the TR7).

Pity.

I would use a 3 leg regulator. the ballast tube only regulates 2
tubes. If you want to be really elegant about it, install the
regulator on a flat piece of aluminum stock and mount it inside the
black IREC tube tube shield which shold be on your 3TF7.

Collins
> > R390/390a and Hammarlund HQ-180A have not turned up in my area.> >

I used a HQ-180 back in the early 1970 attached to my hi-fi system for
recording and I never found it to have good sound quality. My Sony
portable TFM-1000WA blew it out of the water with sound quality.
Communications receivers like the Hammerlund were meant for maximum
intelligibilty of speech, not wide frequency response for music and the
sparkle in a wide range reproduction of the speaking voice. I remember
back when relay stations used communications receivers to get the audio
off the air for the relay rebroadcast, that even when they had good
reception of their source and we had good reception of the relay station,
the sond quality and frequency response of the audip they were
rebroadcasting never came close to being as wide band as picking the signal
up directly on the old Sony. The Hammerlund might have been more
sensitive--of course it was--but if the signal was strong and the noise was
low, it never could beat the Sony. It was too narrowband even at the
widest settings.

I believe that I was mistaken on this technicality. I believe that the
UP/DOWN buttons will not allow you to go below 1.5M and that you must have
the AUX board select those three 500K segments in order to receive there.

Fine, all I said was that it has been suggested by some that a resistor in
place of a wide AM filter could be used, relying upon the selectivity of
the IF.

>TR-7 the filter selection switches work thusly: A: 300Hz CW, B: 6KHz AM,

>C: 500Hz CW, and None Selected: 2.3KHz SSB. I have 4 genuine filters.
>

I have never personally used stepper motor control systems, however, I have used Gray coding in many applications. It refers to the fact that the change from one state to another requires a change in one and only one binary digit. As it applies to two binary switches selecting four filters is an exercise left up to the student.

Rick:

I'm afraid that the most informative articles are on the Boatanchors mailing list administered by Jack Hill W4KH. I too was a bit disappointed with the content on r.r.a.b at first but considering that most of the newsgroups have a high spam and trash content these days we have been quite fortunate. This newsgroup has been spared, mainly because most of the spamming sonsabitches don't know what we are discussing and steer clear of us.

There is no restriction or policy on the Boatanchors-List about cross-posting articles but it is seldom done. I do not quite know why but I believe it may be to do with the concept that the newsgroup is for newbies and the List is for the hard-core.

This newsgroup has been in existence for three months and is going well, thanks to your efforts as proponent. It takes a bit of time for a newsgroup to take its shape and content - as it is up to the readers to determine by the subject and content of their postings.

The only way that we might encourage more substantial discussion of to start them ourselves and see what comes back from the readers. Or, you light want to try subscribing to the Boatanchors-List and get your daily boatanchors fix that way.

73,

Michael W1RC

There are many companies who make or sell these radio systems for networking two or more computers together. All the electronics come on a circuit board and the software is included. Check with your local computer stores. Over here in North America, there are many systems available.

Uh, no! I live about 60 miles (100 km) from Newington, and I often see newsgroup post references to articles in an issue a week before I receive it in the mail. Now I know that Section Managers and Division Directors get theirs about a week in advance, but this seems to be more general conversation on the postings.

Sorry if this is off topic, but I wanted to set the record straight.

Here is a lead on a Black Base Champion. I already have one so I would like to pass the lead on to someone else...

Key's serial number is 179,567 which dates it to about 1952. Key comes with a cardboard Vibroplex factory box but the serial number on the cardboard box is 178,731. The cardboard box does say Champion on it so perhaps there was a mixup at the factory?? Price of the key is $100.00 and includes shipping.

The owner's name is Jeff Hoskins (lives in Eastern Time Zone - FL) and his phone number is 561-283-2291. I encourage you to contact him directly and he is not on the internet. I have purchased a key from this guy in the past and he described it accurately. Actually, it was better than he described.

Source record: 123298
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Recently someone posted here that they wanted to get a manual or copy of same for the Collins KWM-2/2A transciever. I offered to make a copy of my own manual for $12.00 mailed. I made the copy this week but it looks like he found another copy elsewhere or lost interest.

In any event I have a beautiful copy of the KWM-2/2A manual (7th Edition, dated 1 February 1969) with pull-out schematics and block diagrams. The reproduction of photos is excellent.

If interested please reply by e-mail.

Hello to All,
Greetings from a fairly new Techplus. Just wondering if any of the old Swan gear is considered to be Boatanchors? I have a Swan Cubic Astro 102BX and have become interested in tube radios. Would appreciate advice and opinions from fellow Swan and Boatanchor owners on what to look for and what to avoid.

From: mc@shore.net
Message-ID: <5cf884$p0l@northshore.shore.net>
Source record: 123382

I have received a couple of messages from readers who have indicated that they would like to post questions about Boatanchor technology but are reluctant to do so for fear of being laughed at and called "newbies".

I tried to allay these concerns by stating that our subset of the hobby is based on technical exploration and experimentation (one of the raisons d'etre of the Amateur Service) and that there really are no "stupid" questions. We're all here to learn and the best way to do this is from each other's experiences. I have been playing around with this junk, er, fine equipment for almost 30 years and I am still learning.

So if any of you are shy or reluctant to post what you consider a "stupid" question you may send it to me and I will repost it without any reference as to from whence it came. I would like to see this newsgroup become a source of knowledge and information and would be happy to serve as a clearing house for such questions.

805. Collins Reflector

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-26 00:00:00 UTC
From: crippel@exis.net
Message-ID: <32eb7c50.5135652@news-3.exis.net>
Source record: 123384

There have been some postings asking for directions on the Collins Reflector. Here they are:

Collins Reflector F.A.Q.
Updated 01/26/97

What is the Collins Reflector?-

The Collins Reflector is a not for profit information distribution medium VIA the INTERNET sponsored by the Collins Collectors Association to support owners and enthusiasts of Collins Radio. At the present time, subscription is free for CCA members who provide a valid membership number. Non-member participation is strictly at the pleasure of the CCA and the list administrator.

The Reflector is fully automated but administered by:

Chuck Rippel, WA4HHG - crippel@exis.net
Dave Kelly, AI7R - aa7tq@primenet.com

Who can subscribe to the Collins Reflector?-

The Reflector is a benefit to members of the Collins Collectors Association. Those who are on the Reflector and are not currently members of the Collins Collectors Association are also welcome to participate.

For more information on joining the CCA, send an E-Mail request to the Reflector Administrator. Also, if you are on the Reflector, plan on contributing information to the group. Not everyone is "Collins Man of the Week" every week but, everyone at one time or another has something positive for the group. We simply encourage you to "speak up!!" Those who make no effort to contribute could stand to be dropped from the list due to inactivity. Remember, don't just be a taker, this is a 2-way exchange.

How to Subscribe to the Reflector-

Send the following E-Mail message to:

LISTSERV@LISTSERV.TEMPE.GOV

Leave the "subject header" in the body of your message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-Mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-Mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-Mail by the automated list server.

If you have trouble, make sure there is NOTHING else in the BODY of your message including signatures, taglines, etc and try again. Also, the SUBJECT in your E-Mail should also be blank.

How to post to/participate in the Reflector-

To post a message to the Reflector, simply send it in E-Mail form to:

COLLINS@LISTSERV.TEMPE.GOV

The automated list processor will mail your message out to all those subscribed to the Collins Reflector. You will later receive a confirmation from the automated listserver that your mail was sent to the list.

How to reply to messages on the Reflector-

Think of the listserver as a net. There is a large, interested audience listening and wanting to participate. We would all certainly like to share your ideas when replying to a message or commenting on a topic of discussion. Your replies are handled in the same manner as are postings explained above. If you wish to reply privately, you must cause your mail program to reply to the posters address directly.

General Posting Guidelines-

We encourage any information or questions on the subject of Collins radio or general vintage radio subjects if that material is collateral. Since the Reflector is "real time," answers can come back quickly.

Policy on Advertising, Selling and Swapping-

We really prefer that no advertising take place on the Reflector. There are multiple outlet with larger "audiences" available elsewhere. We recognize that some enthusiasts wish to offer their for sale items to fellow Collins enthusiasts first.

Thus, for sale ads for your >personal< gear, are of interest to subscribers and are acceptable provided they do not "clutter" the Reflector. When selling a personal rig, the CCA does use a set of guidelines for grading equipment, The Conditon of Collins Radios, please plan on using those guidelines to describe the

conditon of an advertised product.

The Conditon of Collins Radios document has been published in The Signal and is up on the CCA WWW Site. If you need the address, let me know.

Those who are regular equipment speculators/resellers should not promote their activities on the Reflector.

We also recognize that some Collins enthusiasts provide a whole spectrum of value added items including parts, repair services, books, painting, videos, etc... Because of their level of interest and depth of knowledge, the services and items offered by these individuals can be a real benefit the Collins enthusiast. The same "mention it, don't hawk it" policy as above applies in this case.

Re-distribution of Material

If you re-post or redistribute any information you see on the Reflector, please credit it and the author. This common courtesy is appreciated by all.

Any questions or comments should be directed to the List Administrator. We hope you enjoy and benefit from the Collins Internet Reflector sponsored by The Collins Collectors Association.

806. Engineering Horror Stories

809. R-390-A limiter Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-26 00:00:00 UTC
From: "James M. Toney, Jr." <tcltd@p-o.widomaker.com>
Message-ID: <5cg3ft$c4l@news2.widomaker.com>
Source record: 123388

My older Colliuns contract set has developed what appears to be
a perplexing intermittent problem. With limiter off, set works, then
suddenly volume (audio) drops to almost nothing--if volume/RF gain turned
up can hear the signal. If limiter is then switched on-full volume
returns. Any ideas? Thanks, Jim

810. Heath AT-1 power transformer problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-26 00:00:00 UTC
From: TINAOXER@msu.edu
Message-ID: <17B02AD65S86.TINAOXER@msu.edu>
Source record: 123389

Hi and thanks for reading this post. I have been going through power transformers on my AT-1. This occurs when the rig is idling and not under load. The characteristic smell and heat develop along with that crackling sound. Fortunately, I was able to pull the plug so that not too much damage occurred. The windingsstill check out at appropriate resistances but I have been reluctant to plug it back into the 110v. How can I tell if there is a short in the transformer or the rig? What are your thoughts on this? Thanks, 73's, Ed, W8EO (Tina's OM)

811. F.S. AN/GRC-9

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-26 00:00:00 UTC
From: Rudy Salomon <rhs@pacbell.net>
Message-ID: <32EB9C51.631B@pacbell.net>
Source record: 123390

I have for sale an AN/GRC-9 radio transmitter and receiver combination that comes with an origianl military operation/ depot level maint. manual and a power connector. This is a WWll/ Korean war pack set, intended for portable use.

The radio's front panel and interior are 99.9%, looks like not issued. I checked the receiver which works well but never got a power supply for the transmitter. The radio comes with the cover for the case which shows some scuffing in the paint.

The manual has schematics, photos and line drawings for the radio, a hand crank generator, a dynamotor power supply and a viabrator power supply.

I am asking $100 which does not include shipping (about 35lb from 93065 Zip). Please contact me via E-mail at rhs@pacbell.net.

Regards, Rudy Salomon

C-537 is a 180pf capacitor in the Cathode of V-507. I just had one
drive me crazy leaking causing snapping and popping. Test is by
removing one end and putting a megger across it. That'll flush it
out.

You can buy them brand new for a very reasonable price. Here is the
info from the Care and Feeding guide I return with each refurbished
R390A:

Cabinets

Yes, thats right. Cabinets! You can purchase top quality metal
cabinets which fit the R390A. These are even complete with piano
hinge top covers! The best part is the price, about $125 for the
"DCR" series cabinet as of 1996.

From: n1ddzrjc@aol.com
Message-ID: <19970127010100.UAA00485@ladder01.news.aol.com>
Source record: 123304

Really nice stock Ranger II - good sound and fresh tubes, and a 183D here (needs some caps as the B+ is sagging a bit) otherwise very nice.

These are not "for sale."

I want to trade for things that I want which you may very well have:

Mint JVC Videosphere TVs (NIB even better)

Panasonic TR-005 TV (looks like a little table top martian)

Any catalin radios (Fada bullets, etc)

Any other quality collectable consumer radios or TVs (nothing big, and no consoles) Possible interest in Leicas, large format lenses.

Wassa Transmisor????

Try using a Radio Lan...2 cards should be quite cheep, and would have
far more range than 500 Meters....and no license required!

500 Meters...that's a good band for Xmit!

I have an older Pearce Simpson VHF-Marine, BiMini 12+2
transceiver that would be a good radio for conversion to 2M

It's a 12 channel Xtal rig with tube driver and final.
the rest is socketed transistor style. nice design but I have too many
other projects at hand. As it is, the rig works nicely with 25 watts
output but the CH 16 (156.8Mhz) RX xtal seems to be bad.

Complete with mounting bracket for $40 + shipping (probably under $10.)
obo/trade for Kenwood desk mic.

832. R390A's with extra click

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-27 00:00:00 UTC
From: George Gonzalez <grg@boombox.micro.umn.edu>
Message-ID: <88225.grg@boombox.micro.umn.edu>
Source record: 123320

I noticed while replacing the little AC microswitch on two of my three 390A's, there is a little metal "stop" plate that prevents the main OFF/STANDBY/ON/AVC/CAL switch from moving to an extra position.

One might suspect that the extra position was intended for "squelch", which I think the basic 390 and 392 had. The 390A doesnt.

Was the squelch feature deleted at the last minute, after the switches had been ordered? Unlikely, as these particular radios are early 60's, but why else would there be an extra position on the switch?

Any ideas?

From: old man <ebjr@postoffice.worldnet.att.net>
Message-ID: <32EDABC7.28ED@postoffice.worldnet.att.net>
Source record: 123321

Vintage National SW-3, model 2, battery version. This one has a pair of '32's and a '30. These are PRETTY RARE. It is in a "9" condition and working well. It has been recapped using mylars concealed in the original "cans". The only modification is the addition of a lamp socket and a grommet in the empty lampholder. (The 2 volt filament model does not have an illuminated dial "stock".) I have several spare tubes that will go with the trade as well as copies of articles and documentation.
I would like to trade this receiver, LESS coil sets for an "AC" model 2 SW-3 or a model 3 SW-3 in as good a condition or better LESS coil sets. (The AC model 2 uses a pair of '58's and a '27...OR...a pair of 6D6's and a '76...depending on the heater supply. The model 3 uses octal based tubes: 6K7's and a 6C5.)

I am NOT interested in selling this receiver, only trading it to someone looking for this particular model SW-3!

73,

Sandy W5TVW

>stations. I think it was in rec.radio.boatanchors, but this thread seems
>to have fizzled out or moved elsewhere.

The title of that collection of stories was "Broadcast Blowups" -
the original stories occured on the Boatanchors email list, not
on here. I collected all the stories and forwarded them as 2 or 3
posts to the newsgroup rec.radio.broadcasting (that's where the
professionals who work in broadcasting seem to hang out); some
engineers on there began contributing horror stories of their own.
Seems rats getting into the PA is the most common reason for
a "blowup", but there were a couple tower stories that were
really quite amazing to read, such as a new tower being built on
the wrong spot so the tower workers raised the tower by jacking
up all four legs, then backed a truck under it, and *slowly* drove
it to the correct position. There were some hair-raising tower
failure tales, too.

My suggestion at this point (now 2 years later) would be to contact
the moderator of rec.radio.broadcasting (William Pfieffer, I believe)
and ask him about gaining access to his archives; all those great
stories will be there. That NG also goes out over an email list, too.

Another suggestion woud be to just post your request directly to that
newsgroup (rrb) - surely someone on there has saved all those great
tales.

CommQuart (commquart@aol.com) wrote:
: My crystal filter in my SX-42 is inoperative. Does anyone know of
: the correct characteristics for the 455-kc crystal used in the this
: (Cohn?) design? I am tempted to use a 455-KHz HC-6 crystal from
: my junkbox to replace it -- but I am not sure what the crystal frequency
: is supposed to be, or if it is operating in series or parallel mode in
: this
: circuit.

Go ahead and try the junk box xtal. If the only difference in the
xtals is the operating mode or load cap, the freq may be off slightly,
much less than a kHz I would guess, for a 455 kHz xtal. If worst come
to worst, you might have to peak up the IF alignment a shade.

Most of the xtal filters I destroyed in my younger days had the
xtal in a holder with the connections on opposite sides of the
xtal blank, so would have been extra low C in parallel with the
xtal. The xtals designed for xtal filter use could also have been
specified with a minimum Q or max series R.

From: nick@cs.unc.edu
Message-ID: <5cl63n$76q@altair.cs.unc.edu>
Source record: 123246

OK, I'll post something other than a buy/sell ad as per Rick's request -

Most people reform old electrolytic capacitors before
powering on a rig for the first time in 20 years. OK, some folks are
gamblers and just apply power - I used to do that until I got a
couple of loud flashes and smelly smoke from an Eico 720 transmitter.
Now I try to be more patient....

I found a Heath HV regulated power supply at a hamfest and use it
to reform the caps. Disconnect the caps from the rest of the circuit
and apply voltage through a resistor to limit the current to less than
10 mA. Slowly up the voltage to keep current flowing. You are done when
you're applying rated voltage and the current has dropped to 0.

Sometimes old caps are OK. Sometimes they take an hour or so to
re-form. And I recently patiently coaxed a 100 uf/500v unit back to
life over 24 hours - but it is OK now!

I recently got some caps from MCM electronics for replacement use.
They have 47uf/500v and 100uf/500v units for $4-5. They are much
smaller than older electrolytics. Does anyone have experience with
these in actual service ?

Any comments or other hints and kinks on resurrecting old gear ?

Tim;

I'll give you my two cents worth on Swan equipment. I've been licensed since 1965 and bought a used Swan 240 tri-band 80-40-20 SSB transceiver as my first SSB rig. It worked very well. Definetly in the BoatAnchor class. Other "classics" are the 350 and it's variants. Generally have a reputation as "drifty" but quite serviceable. The 500 series are a real steal on the used market. Swan also made a 6 meter only rig the "250" which is desireable on the used market, although I suspect with the new wave of 6 meter gear coming available, they may lose some of their luster.

I do not know of the Astro series, seems that I recall they may be from the 70's.

In short, a working Swan will get you on the air, probably at a minimum $ and give you plenty of opportunity to get your feet wet in vacuum tube lore.

Michael, and the group,
I see the same as what you describe here.

I enjoyed the BA mailing list but couldn't justify spending $12 on a service
that is usually free most places.

Isn't the BA list available in DIGEST form / ARCHIVE via the WWW some place
anyway??

We should publicize that information to this NG if it is!

Then we could follow up to some of thise discussions and articles here.

I wonder what kinds of threads will get going here next? This NG has GREAT
potential for sure!

I am looking for these guys: HW16 HG10B DX60B HR10B.

I have in mind pieces that are in GOOD ORIGINAL UNMODIFIED COSMETIC condx.
Please, in your response, comment conservatively on:

1) overall cosmetic condx
2) how well it functions, or not
3) original manuals? (or none, or photocopies)
4) anything physically broken/missing/etc
5) price

It is unimportant that they function well or not, but price should
reflect that. I'm most interested in originality and cosmetic
quality.

I don't have any ideas about the extra detent, but I'm interested in how you replaced the AC microswitch, since mine has decided to stick closed. Is there an equivalent part made today? I have been told that the only way to fix this is to use a small, hobby type drill to drill through the case and give it a squirt of WD-40.

858. R390A Hummmmm....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-01-28 00:00:00 UTC
From: George Gonzalez <grg@boombox.micro.umn.edu>
Message-ID: <88525.grg@boombox.micro.umn.edu>
Source record: 123340

If you've noticed your R390A has a bit of Hummmmm.... it may be a design "feature".

If you look at the schematic, you'll see there is raw 120hz full-wave rectified AC that runs from the power suply module to the AF module.

To get there its wire is tightly laced with the low-level wires coming and going to the volume control. This is not so bad in the wiring harness, as the audio lines are run through shielded cable. But under the AF chassis there are just plain unshielded wires and laced together at that.

Guess what happens when you run 300 volts p-p near a low-level audio line? A little bit of the AC bleeds over into the audio.

You can verify that this is the cause of the problem by temporarily putting a 40uf 450V capacitor from the raw rectified AC to ground. You'll probably notice the hum level go way down (at least 10DB). This is just a diagnostic technique and not recommended for the long run.

The downside to this is the B+ will be artificially raised about 20% above normal which is not a good thing and hard on the rectifier tubes.

The cure is a bit difficult. You can put in shielded wire under the AF chassis to replace the unshielded AF wiring. This is not too hard to do but does disturb the nice lacing.

Another possibility is to roll off the AF response at the low end. You can try reducing the coupling capacitor to the AF outptu stage by a factor of two or three and see if you like the tonal balance any better.

Wish I had a perfect answer to this slightly nagging problem.....

Careful there, the ones I have repaired were not riveted together.
They were held together with odd spiral screw-like devices. If you
see the top head of one of these, use a very thin screw-driver blade
to pry them out. The switch housing can then be disassembled.
Burnish up the contacts and reassemble. The contacts will be good for
another 30 or 40 years.

I haven't been able to take part in the CX for several years, but it was fun. Putting all the old gear on the air was a blast. Ameco AC-1, SX42, RCA aviation rcvrs, etc., about 5 or 6 ancient TXs and RXs. Lots of fun hearing everone's creaky old rigs! I hope everyone enjoys themselves this weekind!

Hi gang --

For any of you who've recently upgraded from novice and are ready to
give up being rock bound:

Globe VFO #755A
-- Bandswitching 10M-160M
-- Built-in p/s -- just plug it into your xtal socket
-- Temp. compensated output
-- Calibration is dead on freq.
-- Sine wave looks nicer than my sand state sig gen
-- Approx. 50 RF volts out.
-- Very good cosmetically -- all orig.

No manual $50. + shpg

>
Interesting.... I had thought that maybe the swtiches were just "stock" switches
with
adjustable stops. BUT if you were to look inside the R-390A sudio deck, you will
find in most a bundle or wiring that comes out of the harness and deadends near
the "blank plate" are of the chassis. Some have said that is where the squelch
circuit was to go. Looking at actual design and "costcutting" documents, I have
found that the squelch circuit was one of the things that was eliminated in the
R-390A
that was installed in the original R-390. I havent been brave enough to cut into my
wiring harness and look to see where the small bundle goes, though.

any other idea, folks?

Chuck:

It's a "contest" (more for fun than anything) that rewards using old radio. Points are awarded based on the age of the equipment used to make contacts. It started out as a CW contest but is not limited to it as far as I know. So if I use the 1939 recreation tranmitter and the SP-200 (also late 30's) in my shack as should get big points for each contact.

That's a helluva deal gang! You can get the bits and pieces from Fair Radio Sales. I've seen these units going for $150.00 and up. Its probably the best rf sig-gen for BA-work you can get. If I didn't have one already I'd sure buy this one.....

As always, no collection with the seller......just a good deal!

It's the Classic Radio Exchange. I don't have the details, but your
multiplier for contacts is based on the age of your equipment. Maybe
someone else can chime in with the real info.

I have one Amperex AX9909 tube from the final pair in my Globe
Champion; it was working fine to full power when its mate developed a
cracked base.

For the usual reasons a half a year ago I redesigned my Globe to use
different tubes, and would like to put this one into someone's rig
that needs it.

The working tube has a date code of 59-17.

In view of the last time I checked AES's price was $125 each on these,
I am offering this tube at $50 plus $10 UPS to the continental US.
Your choice of other shipping method (COD, Fedex, etc.) if desired.
Feel free to phone to the number below or e-mail.

From: Kenneth M Gianino <ken@notify1.com>
Message-ID: <32EFB886.2382@notify1.com>
Source record: 123269

Anyone interested? The AN/ARC-55 is the unpressurized version of the AN/ARC-27 and I have the complete ARC-27 service manual with it (same chassis). This transceiver covers 225-400MHz in 1750 synthesized channels and has a seperate 243MHz guard receiver. A work of art from the era of motorized front-end tuning, in service with a wide assortment of aircraft from the late 40's to the mid-70's. Includes control head with 18 motorized presets (fairly rare)- this radio is a mechanical miracle. All tube circuits, but later versions included a solid state guard receiver (still in Fair Radio's catalog) and a transistorized inverter to replace the dynamotor. Runs on 24VDC at about 25A and draws max current when switching channels. Due to the tremendous amount of cooling air sucked through the case, it is noisy when running (similar to a household vacuum cleaner). The perfect UHF companion to your R-390. Not shippable without great difficulty, so a pick-up near St. Louis, MO would be best. If you want it, I'm sure we can make a deal. I might be interested in donating it to a legitimate warbird restoral group. Anyone here from the Air Force museum?

Tim and all,
I operate a Swan 260 & a Heathkit HW101. Both are your basic
HF CW/SSB rigs. Most of my ham friends prefer the
Heath, but I always seem to use the Swan for CW. It is a
solid rig, although it doesn't have a signal strength meter or
key break (to hear QRM in between transmit pauses). The electrical
design of the Swan is very clever yet simple, and the mechanical
design is very robust.

Top dollar paid for pre-WWII telegraph keys to start a small,private
collection. Particularly early Vibroplex and other "bug" models.

Examples of keys in very good condition.

VIBROPLEX

Pre-1920 Blue Racers $500 - $700
Model "X" $500 - $700
Upright Wire Chief $1500 - $2000+
Pre-1920 Originals $500 - $1000

Dunnduplex Dual Lever $ 750 - $1200

Early Bowman and Clapp Eastham "Boston Keys" $250 - $750

Other pre-WWII keys....Let make an offer.

Source record: 123196

Designed to work with Yaesu FT901 AND FT101ZD and maybe FT902.
Could possibly be used with other hf rigs. Uses ouput from 12BY7 driver tube to run it on xmit. In/out on 28mhz from the hf rig. Came with 2m module as standard with optional 6m and 70 cm modules. With all modules run about $200.00 used. No idea what they cost new.

All modules put out 10 watts on ssb/cw/fm. Has built in offsets for 2m and 6m repeater operation by means of a switch. 70cm module only covers 430-440 mhz with no repeater offsets available. (does not work in 70cm fm repeater part of band). All solid state. Has splits for cross band OSCAR sat work.
I am interested in buying one if you want to sell it.

Bob

>also have a collins filter that says heath dynamics inc, part# a4510
>can anyone help me out and let me know what models some of these are
>for and what they are worth. Thanks, Jim
>

Jim:

The FA filters are for the 75S-3B/C receivers and are probably worth $50
75 each.

The 3.1 is a bit wide for SSB unless you also have the 2.1 filter
available. 1.5 is good for RTTY. The 4.0 is good for a narrow AM or wide
SSB application.

What case are the 200 and 800 cycle filters in? They might be worth more
if they are usable in the 75A-4 (vertical 'J' case) or the same size
and pin configuration as the 'FA' case. The real pricey filters are the
'J' can which fit into the 75A-4s and the 455FA05 500 cycle CW filter for
the 75S-3B/C receivers.

Are you interested in selling/trading any of these filters? I have a
455FA21 2.1 kc SSB filter available......

Source record: 123278

As Nick stated it is NOT prudent to just "Plug and Pray" (make that play to make it politically correct) ! Why risk an expensive (if available) transformers, chokes, and tubes, unnecessarily !
Case in point-- I bought a B&W 5100 / 51SB in October, and removed the guts in my shop, so the front panel and case could be properly cleaned up ! While the chassis was out I did a quick visual and saw leakage from the filter caps, but no signs of any crispy critters or wiring !
THEN, I put it away until I got the caps and the manuals ! I like to have prints on hand if something starts smoking ! I'll also check all the tubes while I'm waiting .
Next, check the caps beforet applying power. If filter caps are replaced as a routine thing, I apply power with just the rectifiers and regulators in place, and I'll monitor the voltages for a while under "no load" conditions ! Then I'll add tubes in
successive stages with cool down periods in between !
I am fortunate in having a well equipped shop, and realize there are a lot of people without, but a good visual inspection should be performed as a minimum , since many old caps will show leakage as a white powder at case seams and/or terminals !

Hi folks!
I have made a LOT of improvements at my web site.

Probably one of the largest lists of hyper links to great ham radio sites -
classified and grouped according to the following topics:

QRP
DX
CONTESTS
VHF
BOATANCHORS
BUY & SELL
HOMEBREWING
NETS
ARRL & FCC
QSL INFO
TUBES
GLOWBUG CONSTRUCTION PROJECTS
MODIFICATIONS
HAM CHAT LOCATIONS
RADIO HISTORY
PARTS
... and many more!

You name it - you can find it at my web site! Best of all it is FREE with no
strings attached, no annoying e-mails afterward etc.

Take a look and tell your friends:

Hi - I have another mystery transformer here if anyone can help to identify it:
This one has no brand name, and looks like the typical small 1" X 1" X 1.25" thing, upright mount with cover shields on it. All shiny metal covered with some kind of light yellow goop sealant.
Markings are:
MSY-P-43755
SA-7846

It has two 18 ga. red wires out one side.
The other side has three smaller gauge wires 22? black, white & blue.

ANY IDEAS?

Hi guys.
I have an interesting looking transformer here and wondered if ANYONE knows what it is or can help me find out?

It is marked TRANS INC. TM 4075

It looks to be about a 50 watt class of transformer, but I have no idea if it is a power transformer or an audio transformer or what!

It has about 8 lugs on each side, and they are numbered 1-16

Any ideas? Please e-mail me
bry@mnsinc.com

I just checked the above URL myself. It didn't work the first try.
I just added a slash bar to the end of the URL and it worked OK then.

Try URL http://www.vibroplex.com/

I've noticed this on a few occasions before. Hope it helps.

Bill,

The R390 (non-A) should have a squelch position on the FUNCTION switch.
The antenna trim control is on the right side of the panel vs. top
center on the A model. Also there's a third position an the audio
response switch (MEDIUM).

It depends on how the switch failed. On mime, I carefully opened them
up by pulling out some tiny twist pins. Once open, I saw that the
contact points were mostly burned away. I could have bent and cleaned
the contacts, but I'd always be wondering when the switch would fail
again. If you are lucky you will find the contacts in better shape
than this.

I scouted around at all the local electronics stores and was unable to
find a similar type of switch. Most modern microswitches are either
thicker, or have a different mounting style than the ones used in
the R390A. As a last resort, I bolted on a modern microswitch with a
long actuator arm. The arm could be bent to ride on the cam and turn
on and off properly. Not a perfect solution. Perhaps someone else
has a better way?

Source record: 123292

Hello All,

I have an R4B but no manual. Does any one have one available?
Either an original or a copy would be fine. Let me know what you
want for it.

I also need 2 knobs for the R4B. The previous owner (who I suspect
may have been blind) put crimps around the skirt of my tuning knob.
If you have an extra knob you would like to sell let me know. Or else
if you have a junker and would like to trade a good knob for mine plus $,
let me know. The second knob I need is the band switch knob. I believe
this is just one of the smaller knobs.

Thanks,

Tim

Message-ID: <32f2173d.4171773@netnews.netreach.net>
Source record: 123213

Hi Guys!

Have an R-391 autotune receiver and yes, both the electronics and the autotune system work well but, was wondering though if anyone has any "hands on" experience with the "multi-turn" positioning heads and their clutch assemblies.

As purchased, the clutches in these heads made a somewhat loud metallic sound when they are operating. The kcs clutch noise is much louder then the mcs clutch noise but neither head makes any real noise when the clutch locking keys are in the "unlocked" position when the clutches are allowed to run free.

Clutch design is a split brass ring coated with sintered bronze or perhaps oil-lite bronze. The bronze surface is relieved in several places so as to create bronze "shoes" on the brass ring. The clutch ring with bronze shoes runs inside of a stainless steel sheet metal cup with a matching, slightly larger stainless sheet metal cup covering the whole thing.

The clutches were dry when opened. Was wondering, were they dry by design or by neglect? The heads have been cleaned and lubricated at the obvious spots but should the clutches themselves be oiled or greased in some way and if so, with what?

The TM says to lubricate the heads per figures 100, 101 & 102 but my TM is a copy and is missing figures 99 to 109 (and maybe more as the last page in my book is 212) so... hopefully, somebody out there knows what to do.

I bought some equipment from someone who got it from TS&S.

I had a technical question and called them; the owner opened up
a piece of equipment (it was not an easy job) to get the answers
for me, even though I was not a customer.

This was, I felt, way above and beyond the call of duty and I would
not hesitate to do business with them.

Keith... You can still find them somewhere...but I cannot tell you where. They will be expensive too. I would suggest that there are some circuits that use a lower cost obtainable zeiner diode with a pass transistor. Works FB... There are many circuits describing this in the handbook. You can use a cheaper 1 watt zeiner with a 2n3055 transistor...or something like that that has enough gain t\o make it work. Just a thought...cause the big zeiner is expensive.

I have been working on my t4xc the past few days....it tunes up beautiful (150 w output) when using the vfo in rcvr position and xmtr position....but when put in the "separate" position in draws off resonance current without keying the xmtr !!

this problem is driving me wacky !!!

Does anyone have any ideas that I might try !

thanks,

de k6zsr "mike in montecito"

Tim - you can find sources of manuals at the web site listed below in the
file MANUALS.TXT

or just click on the MANUALS button there!

The information you are needing can be found on my Web Site in the
HAM RADIO RESOURCES section at the address listed below.
ENJOY!

I have a number of unique resources available for radio etc.

MEGALIST + HAM RADIO + HOCKEY = Bry's Page!

http://www.mnsinc.com/bry/

All the very best - Brian, AF4K / G3XLQ

"Tim Nagle" <timothy.nagle@unisys.com> whistled a happy tune like:

|>Hello All,

|>I have an R4B but no manual. Does any one have one available?
|>Either an original or a copy would be fine. Let me know what you
|>want for it.

|>I also need 2 knobs for the R4B. The previous owner (who I suspect
|>may have been blind) put crimps around the skirt of my tuning knob.
|>If you have an extra knob you would like to sell let me know. Or else
|>if you have a junker and would like to trade a good knob for mine plus $,
|>let me know. The second knob I need is the band switch knob. I believe
|>this is just one of the smaller knobs.

|>Thanks,

From: David Medley <davemed@postoffice.worldnet.att.net>
Message-ID: <01bc0fc6$eeea3940$66ce93cf@dave>
Source record: 123223

I am looking for non operating Hallicrafter or National Radios. I do not want basket cases but radios that are capable of being restored even with a lot of work. Radios don't need to be clean but should not be rusted or corroded. These are usually basket cases.
If you have anything like this gathering dust and taking up space in your closet that you would like to move out send an e-mail to:
<davemed@worldnet.att.net>
and we will make a deal to free up some closet space for you.
Dave

>What happened?

Following up to my own query, I just didn't try hard enough:

ftp sunsite.unc.edu
login: anonymous
password: <your email address>
cd pub/academic/agriculture/agronomy (well hidden!)

and if you do a "dir" you see the directory includes the DAILY.BA and
even the 3-DAY.BA digests of the email list. Issue the command
get <file name>
and the file will, as if by magic, end up in your home directory.

But I *highly* recommend paying the $12/year to get on the list -
it's a living encyclopedia of military, commercial, and amateur radio
history. And you can only post to the list if you're a paid member.

Note that in that same directory above are the daily digests for the
QRP list, too. Also, there used to be another directory to cd to
that contained lots of ham stuff (early 30s transmitter circuits
included).

948. RF Field Intensity Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-01 00:00:00 UTC
From: davidb@scn.org
Message-ID: <E4wuDI.507@scn.org>
Source record: 123144

The latest BA I've acquired comes in a dark green (but not olive drab) metal container, weighs about 20 lbs, and is full of 1 and 3-volt 7-pin miniature tubes. There's a name plate on the outside case that says "NM-20B RADIO INTERFERENCE and FIELD INTENSITY METER" (plus some other text not worth mentioning. The manufacturer is listed as Stoddart Aircraft Radio Co., Inc. in Hollywood, CA. Both a friend and myself have concluded it is probably FAA surplus. It looks like it was built in the 1950s or possibly the late 1940s.

It is very nicely built, and its frequency range of 150 kc to 25 mc means it should be useful for antenna testing on most ham HF bands. Other features of note include the ability to listen to the signal being measured via an audio output jack (including a switchable BFO for CW), provisions for connecting to an external power supply if the portability of battery operation isn't needed, and twinax connectors for both loop and whip antennas. The antennas themselves plus some 90-degree twinax elbow adapters are stored under the top cover.

As an aside, there's gotta be some sort of BA gravitation principle that makes one BA attract others. When I first got interested in old electronics, I had a hard time finding any. This latest acquisition was given to me free of charge by a friend who knew I'd probably be able to give it a good home! A friend of his apparently found it on a dumpster dive behind a broadcast radio station.

You basically just need the crystals installed in the transmitter. If I recall correctly, the frequencies were listed in the manual. Heath did sell them as pack I believe, a la Collins, but they are not commonly found for sale separately.

965. Limiter won't limit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-01 00:00:00 UTC
From: davidb@scn.org
Message-ID: <E4y7nB.2vp@scn.org>
Source record: 123161

Well, at least that's my best guess as to the problem. I have a Lafayette HA-52A VHF-FM communications receiver, that despite being an FM receiver is _very_ sensitive to RF noise of all sorts. I can hear the ignition systems of any car that comes within a block of my house, and when I turn lights and appliances on and off, I hear a click in the speaker just like in an AM receiver.

A little on the electronics of this set... it has a limiter stage (a 6AU6), even though the detector is a ratio detector and not a discriminator. At first I thought that either the 6AU6 was at fault, or the IF stage before it, a 6BA6, was (by not providing enough drive to keep the limiter saturated), but substituting both those tubes for new ones made no difference.

I have the original manual for the radio, which comes complete with a schematic showing voltage levels at several test points. I've measured them all, and with one exception there's nothing surprising. The only surprise is the plate of the tuned 6CW4 RF amplifier, which is at 106 volts instead of the rated 75; though a surprise, I don't see how a discrepancy here can affect the limiter like this. I've gone through all the resistors, and with one exception they are all in tolerance. That one exception is in the AF section (and has since been replaced). The capacitors are all ceramic or mylar (I replaced the one "Black Beauty" that was in it). All the IF transformers show continuity where expected.

I've just about come to the point of concluding that the limiting in this set never was that good, and it probably was sensitive to noise the day it was bought. But before I do I thought I'd post this and see if there's something I've overlooked.

From: mlisenco@pipeline.com
Message-ID: <5cu7ko$l0v@camel5.mindspring.com>
Source record: 123238

I have been handling the sale of my elmer's estate. In cleaning his basement, I came across the following older gear:

- Gonset Communicator II
- Conset VHF Power Amp
- Gonset 6 meter mobile receiver (connects to car radio)
- Globe Scout 680A transceiver
- Johnson Viking Messenger

The items seem to be in good cosmetice condition. I have the instructions for all the Gonset items and the Sams for the Messenger. I've found no printed material for the Scout. I do not know the working condition of the items. They will be sold as is.

Could anyone give me the approximate value of these items as I would like to price them fairly. They will not be sold as "gold". I just want to find a home for them, preferably locally as they will probably cost more to ship than they are worth.

Any help or suggestions would be appreciated.

Tnx es 73 de Mike/N2YBB (for the estate of K2DTT)

Source record: 123242

Thanks for all the responses on this. I got as many queries about getting a Magnolia Blossom QSL card as I did about the Drakes and Collins gear in Canada.

I am not K4NBN...that's Don in Dixie. Sorry, but I think he has official rights to the Magnolia Blossom cards -- better to ask for one via the callbook. Mine's about 9 years old and in a box some where in storage....

As for the Drakes and Collins gear, would someone be interested in trading a good condition C-line for a Collins KWM2A ? Would this be a fair trade given similar mechanical/electrical condition?

Thanks,
Joe BV/N0IAT (with a c-line to trade for a KWM2A, and a c-line to keep for myself)

Source record: 123164

Dear OM,

On the TR7 IF selectivity board the first position on (left
side of the board) is the stock 2.3kHz filter. This is selected
when the both BW switches are not depressed.

The next filter position, A ACCESSORY, is selected by depressing
only the A BW switch. The B switch is not depressed.

The third position B ACCESSORY is selected by depressing only the
B BW switch. The resistor enables you to have a wideband 8-12 khz
filter by using the first IF filter (48.05 MHz filter on the
UP-Converter Board) as the only filtering element.

The fourth position, C ACCESSORY is selected by depressing
both the A and B switch. Note that this is labeled C on the
front panel. Since your rig does not have a filter in this
position you will not hear any signal. Place your CW filter
in this position.

All resistors on the filter board are standard 1/4 watt, 5% carbon
composition resistors.

The VLF antenna input is on pin 7 of the ACCESSORIES connector.
This rig is a good performer on the VLF bands.

Good Luck with the TR7

Mike N2MS

> Would appreciate some help on setting up the 401 as a stand alone
> transmitter. I have the 303 but want to use them separately. Thanks
> Jim Doyle KR4PW jado@worldnet.att.net

You have to add all the crystals to make it stand-alone. Freq's are the
same as found in the SB303. Here is a list:
80M: 12.395 MHz
40M: 15.895 MHz
20M: 22.895 MHz
15M: 29.895 MHz
10M: 36.895, 37.395, 37.895 and 38.395 MHz
Carrier generator crystals:
USB: 3396.4 kHz
LSB: 3393.6 kHz
The CW carrier crystal should be installed already and has 3395.4 kHz.
All crystal cans are in the HC6/U can. The tricky part is to find out
which load capacitance the crystals should be grinded for and which
of them are fundamental and overtone types. You can measure the crystals
in your SB303, they should be the same. I got mine from a scrapped 303.
Also, on the mixer board is a place for a 21 MHz trap which should be
installed when running the 401 with other receivers than the 303.

I've got one of these. Might be a manual inside
the unit. The Manual appears to have been hand
typed on a type writer. Mine came in a shipping
box and has the headphones...circa 1954 BTW. Best
headphones I've ever used on CW. Really limits
the hash noise. Amongst the BA afficiandos, that
makes 3 of these Stoddard instruments known to
exist. It's a very beautiful instrument. Soon as
I can figure out a way, it's going on display in
the living room. Mine has been modded slightly so
that it runs off gel cells stored inside the case.

Hello... Brian here!

If you have a RADIO and a SOUND BLASTER (or compatible card) you already have all the hardware necessary to receive WEFAX, FAX, SSTV and RTTY.

You can also transmit monochrome FAX and SSTV, with the current version of my FTV software.

*** Put the power of your 80386, 80486 or Pentium processor to real use ***

The external "decoder" units that are used by conventional users are modelled inside this software. This makes it easy to get started, inexpensive and rids you of the inevitable tangle of wires and boxes of decoders.

Absolutely no external hardware, other than a simple audio lead, is required by FTV. The current version decodes:

WEFAX (from weather satellites, e.g. 137-138 MHz)
HF-FAX (from terrestrial stations)
SSTV (from radio amateurs, e.g. 14.230 MHz)
Baudot (press, naval, weather etc)

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) The incoming signal is analysed automatically - standard modes, line rates, baud rates and keying polarity are automatically determined following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

*** What are you waiting for? Try it now! ***

Take a look at my web site for futher details, from where you can download an evaluation copy, at: http://www.geocities.com/SiliconValley/2504

A registered copy costs US$ 25. Registration promotes the further development of this software and entitles the user to future upgrades

paying only for delivery
expenses, if any.

Fianlly, just in case some of you have trouble accessing my web site, here is my postal address (if you want a reply, send a self-addressed label and IRC's to cover expenses):
Brian E. Cauchi,
Gawhra, Domenico Cachia Street, Birkirkara BKR06, MALTA.

What can I say? Try it, and may you have as much fun as I am having...
73's from Brian.

have the following NOS EFJ parts to find a new home for.
sell/trade as one-lot:
QTY EFJ # description
1 16.86.1 star washer (like behind most EFJ knobs)
1 592-5016-4 small IF can
7 116-214 smll knob top looks like screw slot
2 233-501-1 coil form (iron core) permeable tuned
1 116-265 Vernier dial (skirt 0-100) like KW MB style
1 116-285 vernier dial (has small knob & more)
3 104-262 coupling-ceramic 1/4" x 1/4"
1 104-251 " " 3/8 x 3/8
4 104-251-2 " " 1/4 x 1/4
1 22.778 Mica 150mmf @ 1200 vdcw
1 22.1465 switch-ceramic single wafer
3 762 RF chokes verticl-chassis mount

resonable offer cash/trade..plus shipping...
have no use for them...
I like: original manuals, old mics (cast aluminum style)
any interest?

993. Atomic Instrument Company (?) Two Meter rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-02 00:00:00 UTC
From: McCullough <mccu@erols.com>
Message-ID: <32F51AC4.3639@erols.com>
Source record: 123181

I wonder if anybody else on here remembers a rig I had back in the 60's, it was a two meter AM transceiver, made by a company called Atomic Instrument Company, or Atomic Labs, or some such name. At least I know it had "Atomic" in the mfr name.

It was a grey box, a little over a foot square, with a superregen receiver and probably about 5 watts AM output. As I recall it had a little dial scale with a clear plastic face plate and a pointer that tuned from 144 to 148 mhz or so.

It was kind of similar to the Heathkit "Twoer" of that time, but I thought it had better sensitivity. I think it had an "acorn" tube in the front end. Even back when I owned it in the '60s, no one else had ever seen or heard of this radio. I had no documentation on it, having picked it up at a hamfest.

Does this thing ring a bell with anyone? It must have been relatively rare, even then. Wish I still had it, but like so many other rigs, it got swapped for something else.

Chuck, KM4AO

From: joeh@arakis.sugar-river.net
Message-ID: <slrn5faqbe.jj2.joeh@arakis.sugar-river.net>
Source record: 123093

Zenith Transoceanic Description:

Black Stag leatherette case.

Model 8G005YT

S/N B142646 (note: supposedly a B146966 was built in 1948.)

Has "Instructions and Log" with "Zenith Transoceanic Clipper" and
"Model No. 8G005" printed on the log. There are no notations in
this log. It is "like new".

The broadcast band works. There is a small amount of hum. The
signal quality is good.

It has a "WaveMagnet" loop antenna in the rear cover.

The short wave bands receive no signals.

Everything is in top notch physical shape.

It is in "museum quality" physical condition.

There are no batteries or headphones included.

Price: $200, UPS USA shipping included.

Best Regards,

Joe Hartmann Tel: (603) 863 6073 Newport, NH

Yes this is normal for AM reception because you will ahve to tune the
AM signal so that it is in the centre of either the upper or lower
passband .

Hi and thanks for reading OM;

I'm looking for good suggestions for an old Heath, or other,
transceiver. The following would be basic considerations:

1. 10 to 80m converage, AM/SSB/CW operation.
- 160 would be a nice addition.
- 150-30m general coverage would be nice as well
2. 100W or greater.
3. AC120V supply.
4. Easily replacable tubes, and still genarally servicable.
5. seperate VFO input.
6. CW filter.
7. Rough idea on what something like this would cost 'cause
I'm a 'goin to Dayton.

Thanks in advance, '73s Gabe Nemeth VE3-SLJ.

PS: Weight is not an issue.

1013. FS: HO-10 parts unit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-03 00:00:00 UTC
From: Chuck Penson <penson@sci.mus.mn.us>
Message-ID: <32F62560.3376@sci.mus.mn.us>
Source record: 123105

This is actually almost too nice for a parts unit, it is non-working but everything is present except (you guessed it) the power transformer. The front panel is fair (some small patches of oxidation), the cabinet is pretty good, the CRT is present, it has all the original knobs, and is pretty clean inside.

Best offer plus shipping.

1018. Need help with 30L-1 amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-03 00:00:00 UTC
From: UGAMAT@UGA.CC.UGA.EDU
Message-ID: <17B0AC369S86.UGAMAT@UGA.CC.UGA.EDU>
Source record: 123110

30-L1 Amplifier when driven by either KWM-2 or S-line develops a "warble
that is described by a listener as "FM-ing." Output power from amp won't
get much over 100 watts or so.

Thus far, I have replaced: (with no improvement to signal)
1.All the HV electrolytic filter capacitors.
2.The air-variable tuning capacitor (old one had 3 melted vanes).
3.All the diodes and bypass capacitors in voltage doubling network.
4.All 811As with a matched set of 4.

Of the four resistors (47 ohms, 1 watt) to the grid of each of the tubes,
3 give a reading of ~47 ohms, and one gives a reading of ~72 ohms.

Looking for suggestions about where to go from here.

>PS: Weight is not an issue.

Let me see if I can help you out here. I'll work from memory on most of this. Here goes...

Heath: No 160m, no WARC-79 bands, no GC receive, no AM, separate AC power supply. CW filters rare and expensive. Most tubes are common and not too costly. Lots of opportunity to do your own repairs on these rigs, since many of them were poorly constructed. Heath gear, once the bugs are worked out, is very dependable and sounds good on the air, all though it's "bare bones" gear.

Drake: No 160m, no WARC-79 bands, no GC receive, pseudo-AM, no CW filter on TR-3, TR-4, and TR-4C, separate AC supply. Finals are EXPENSIVE (three tubes required!), other tubes common and reasonable. VOX amp tube prone to wearing out, and PTT depends on it to work.

Collins: Too darn costly. No 160m, no WARC-79 bands, no GC receive, separate AC power supply. Original CW filters rare and expensive, but I think aftermarket filters may still be available. Rugged 6146B PAs and other tubes not too exoensive. Collins gear just too darn costly due to collector interest. Watch for rigs recently surplused by the US military, as they nearly always need repair work.

Kenwood: Early TS-511 and TS-900 are not too common, and they're basically featureless and obsolete. TS-520 and TS-820 series have no 160m, no WARC-79 bands, no AM, and no GC receive, but do have built-in power supply. Later TS-530S and TS-830S have 160m and WARC-79 bands, but still no AM and no GC receive. These rigs are all solid state except 12BY7A driver and 6146 PAs. The 520, 820, 530, and 830 series are solid, dependable rigs that work well. CW filters are still available from aftermarket vendors.

Yaesu: FT-101 series have 160m, AM, and built-in power supply, but no GC receive and no WARC-79 bands. Many have been butchered by CBers (watch out for this!). Weak receive on 15m and 10m bands too. The sweep tube finals are very expensive and tend to be short-lived. The later FT-901 series have AM, 160m, WARC-79 and built-in p/s, but no GC receive. Complex and trouble-prone. Problems with VFO and display are common (at least from what I hear). Tubes in driver and PA are 12BY7A and 6146Bs.

Tempo: Tempo One was a re-badged Yaesu FT-200. Most of same problems and features as FT-101 series. Watch out for rigs formerly used by CB'ers. Tempo 2020, well, just plain avoid this one. Complex and trouble-prone.

Icom didn't make any tube-type gear.

Ten-Tec didn't make tube-type gear.

Swan: No 160m, no WARC, separate AC supply, some won't accept CW filters, sweep tube finals, very expensive 7360 balanced modulator tubes are hard to come by. Power supplies are trouble-prone and are often pushed right to the limit if you run the rigs at full power. AM derived by un-balancing the carrier and using one sideband. VFOs well-known for drifting and FMing due to p/s problems.

In my humble opinion, one of the Kenwoods would by your best bet, if you can live with a hybrid rig (part solid-state, part tube-type). I would urge you to consider an all-solid-state rig, if you're looking for one to use as a primary rig, since the older ones offer a good value for your dollar these days, and there are no tubes to mess with. Don't get me wrong, I like to play around with tube-type gear, and I even build some of my own. But for my main rig, give me solid-state any time.

Wish I could join you at Dayton... maybe some year...

I don't believe you'll find *any* Heath xcvr with that type of rcvr coverage. The idea of an HF xcvr containing general coverage rcvr is relatively new.

Jeff KH2PZ (remove .heath from address to reply)

1021. Any use for RT-196/PRC-6...

Newsgroup: rec.radio.amateur.boatanchors

How about (if you're REALLY into firebottles) a Technical Materials exciter or a Central Electronics? In the mid-late 50s to early 60s, these companies made some very modern (for their time) rigs. You will likely see some of these at Dayton, at prices a lot lower than Heath, Johnson, or Hallicrafters -- which are now approaching Collins rigs in terms of collectible desirability.

You're likely to see some receiver/transmitter pairs which should merit your consideration -- and you don't HAVE to buy a matched pair; a Heath is happy next to a Hallicrafters. As for price -- well, the best deals go early.

If you could stand to have something that's tube-impaired, how about an Atlas 210 (80-10m) or 215 (160-15m)? These can handle an external VFO, are cheap -- typically around $150 for a nice working unit -- and have a few available goodies like an AC power console and VOX. They're compact and also easy to service. The down-side of the Atlas is that while it's got a superior crystal filter, it's a superion 2.4kHz bandwidth crystal filter. You have to add an outboard audio filter -- or a DSP.

The up-side -- the quality of DSP filters is so good nowadays and the price so low (relative to crystal filters) that a DSP is a wonderful, cost-effective addition to any station, not just a silicon-based Atlas (which is a pretty good rig, actually; I earned WAS 40 Phone on my Atlas).

Source record: 123116

I have a very nice Drake SPR4 for sale. The unit was sent to Drake for a checkup last year. They give it an alignment and replaced a couple of out-of-spec parts. It also has an updated audio board. It has 22xtals (2 open sockets), covering .2Mhz to 10MHz, 11.5, 14, 15, 21.5. and the optional xtal calibrator and 5NB noise blanker (VERY RARE). Other xtals are readily available.

Not getting used much, and would rather sell than have it sitting in the garage.

I am asking $390. I also have a MS-4 speaker in excellent condition, $35. Offers?

1025. Re: WTB: Eimac SK-406 Chimney(s)

Greetings

I use a large "Farmans Pickle" jar for my 3-500 chimney (6 mtr amp).
All you have to do is to scribe a line around the base of the jar
using a glass-cutter tool and CAREFULLY tap along the scribed line
with the end of the cutter until the glass separates.

Carefully sand the edges to remove the SHARP edges and install your
chimney. The tapered portion at the top of the jar fits nicely around
the top of the tube.

There has been a great thread going on uk.radio.amateur
the past few days about WW2 era military batanchors like the
"38 set" , W.S 19 set and the Marconi 52 sets, R-107 receivers etc.

You might want to take a read if you are interested in this sort of thing.

Howdy Group,

I am looking for old test and measurment equipment in wooden boxes by Leeds & Northrup, General Radio, Rubicon, and any of a dozen other companies. I know it's out there by the busload and use to buy it from various University auctions.

I am in the market again so drop me a line or call 512 459 6855. Ask for Neil

Hi Gabe-

I'd say if having a transceiver (rather than a separate xmtr and rcvr) is more important than WARC & 160 meter bands, then the Drake TR-4 series would be the ticket. $200 - $400 depending on version and condition. 200+ watts OUTPUT PEP on SSB. Great rig.

If having 160 and the WARC bands is more important than having an integrated transceiver in one piece, then I'd say you'd like my personal favorite rig: the Drake 4 Line twins. There are several vintages/versions and an original set can be had for less than $150 at times. The latest and greatest of that series is the Drake C Line which is (again) my personal favorite of `em all, and they can be had for $400 and up, depending on condition and what options are installed. They'll usually do 125+ watts PEP.

If you'd like any further details, just let me know.

Just for fun, I've attached a picture of the Drake T-4XB and R-4B, which is pretty representative of the whole 4 line.

Let me know if I can help.....

73, Tom KJ5IE

Joe:

I agree with Ray. I got two of the $325 30L-1s and a parts KWM-2A..
The units were well packed, arrived one week after they said they
would ship, and in the condition stated. One 30L-1 had been
transported a lot and showed a lot of ware, however, it worked, the
better looking of the amps had several broken parts inside and
questionable tubes.

Thje parts/junk KWM-2 A (less than $ 295) was on the air 48 hours
after receiving it.

The KWM2As blew out the door the monday morning after QST hit, I don.t
think that there are any more 30Ls either.

1036. Dallas Ham Radio Auction

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-04 00:00:00 UTC
From: GKitto <Gkitto@teleteam.com>
Message-ID: <01bc122c$0464b0e0$af6c4f03@gkittocrege>
Source record: 123124

Dallas, Texas: The Dallas Amateur Radio Club is holding their annual Ham Radio Auction on Wednesday, February 5, 1997 at 7:00pm at the Wyatt's Cafeteria at the southwest corner of Forest Lane and Marsh Lane in Dallas. You may bring any amateur radio related equipment to the auction to offer for sale. The DARC will receive a 10% donation fee for each sale. There are no minimum bids, however, if the seller's equipment does not receive a satisfactory bid to the seller, the seller may make the highest bid in order to retain the equipment, but will be required to submit a 10% donation fee on the seller's bid price to the DARC, the auction sponsors. The DARC is also asking for donated amateur radio equipment to be auctioned and 100% of the proceeds will go to the benefit of the DARC. The DARC will make arrangements to pick up any radios and small equipment at your home, if you desire to donate equipment to the auction. Any large pieces (Towers, antennas, etc..) may be auctioned by photograph.

Set up will be at 6:00 pm and preview will begin at 6:30 pm. All equipment is sold as is , where is and the DARC assumes no responsibility for the condition or functionality of any auctioned items. This has been in the past and will surely be a great event this year. So, BRING ON those unused radios, boatanchors, HT's, computers and all other ham radio gear. Once again, the Ham Radio Auction will be at the Wyatt's cafeteria in Dallas at the southwest corner of Forest Lane and Marsh Lane at 7:00pm on Wednesday, February 5, 1997. Anyone with questions or donations may call Glen Kitto, KC5WBQ at (972) 383-7507 (Email - Gkitto@teleteam.com) or Bob Peters, K1JNN at (972) 288-0484 (Email - Soundimp@intex.net).

1044. Swan 270C

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-04 00:00:00 UTC
From: Jeremy Cowgar <jcowgar@villers.com>
Message-ID: <32F76A0E.5550@villers.com>
Source record: 123132

I have a Swan 270C that I have been using for HF SSB contacts and now wish to venture into CW. This radio is of course setup for this however the offset of my CW tone is way too much. For instance, I tune in a CW station to where he sounds good to me, when I transmit I am way off frequency, almost unhearable.

Does anyone know how to adjust this on the Swan? Any information would greatly be appriciated, greatly!

Jeremy Cowgar - KB8LFA

1045. Re: BAs w/Selectable Sidebands

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-04 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.970204123359.25270A-100000@Ocean.CAM.ORG>
Source record: 123133

This is normal. Earlier receivers were not designed for SSB. Besides
not having filters specifically for single sideband, and a tuneable bfo,
there is no scheme included to shift the local oscillator frequency when
the bfo is tuned to switch to the other sideband. So you have to retune
the main dial to compensate

I seem to recall that at least some Swan rigs had a triple "point" on
the vfo dial. One mark, in the center, was for CW, and the two on
each side of it were for lsb and usb. Switched the sideband, and at
least you knew the new output frequency. If you needed to be on the
same frequency, you'd just readjust.

More recent "boatanchors", those that used crystal controlled bfo's,
included a tiny circuit in the vfo that shifted it a tiny bit when
the sideband was switched.

The digital rigs must do something similar, though since they are
digital the technique to compensate must be slicker, like adding the
exact amount of shift to a synthesizer or DDS, rather adding some
capacitance to a vfo that was probably not the exact amount of shift
to start with, and which wouldn't be the same amount of shift at the
top of the band as it is at the bottom of the band.

Message-ID: <mac.855086379@zaurak.cis.ksu.edu.cis.ksu.edu>
Source record: 123138

I'm a little sorry to post this question to this group, but there aren't many "rec.radio.amateur" groups that come through my newsfeed, so I don't have much choice.

I'm looking for what I think is probably a construction article from the May, 1996, issue of "73 Magazine"; it's related to Wayne Green's claiming that someone has found an electrical/electronic cure for many diseases (including AIDS). If you subscribe, and if you have that article, please email me.

Mine is 4th ed., published in 1953 and printed April, 1965. When I
ordered it in 1965, I had to wait 5 or 6 months for it.

1054. WTB : Clegg FM-DX for parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-04 00:00:00 UTC
From: "Robert A. Poff" <wb3awj@sprynet.com>
Message-ID: <32F7BF3F.67ED@sprynet.com>
Source record: 123142

Looking for a bombed out FM-DX I can scavange parts from.
Particularly the balanced mixer in the transmitter.

Hands--On Electronics (Ithink it was) had an article
on using the color--burst from a TV signal for a standard.

That will give you the stability of a cesium clock.

Good luck

1061. 3TF7 Equivalent? - Amperite TJ311M01 ballast

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-05 00:00:00 UTC
From: NormB@gnn.com
Message-ID: <5daaer$lco@news-e2c.gnn.com>
Source record: 123050

In a box marked 3TF7 I found an Amperite ballast tube marked TJ311M01. The Amperite ballast has the same internal appearance as the 3TF7 but I am unable to make comparison tests because the only 3TF7 (by designation) which I have is open. If this is an equivalent, I have several which I am willing to sell for $15.00 each postpaid in the continental US or $25.00 postpaid for two.

Any information regarding the equivalency of these ballast tubes would be greatly appreciated.

I have about 200 other ballast tubes of which I have little interest. E-mail with your wants.

Norman

>greatly apreciated

Why don't you restore, use it with your R-390 instead of stripping the cabinet from it. A rack mount cabinet is a standard item available by other means.

A panalyzor is a spectrum (radio frequency) analyser, which in this case is tuned to the IF frequency of a receiver. As you tune to a station, whether CW, AM, NBFM, or SSB, the broadcaster sends out telltale frequencies around the center broadcasting frequency. On a 'pananalyzor' this is displayed as spikes of differing heights surrounding the main broadcast frequency. The spikes represents the modulation frequencies. As you view the display, you will recognize different spectrum (frequencies) displays for all the different modes of modulation and also how well the the modes of the modulation is being carried out. The panalyzor is a valuable tool to let you know visually what kind of siganl is being received. In the military, it was used as part if the electronic counter measures group of instruments.

On another receiver like Hammerlund's SX-28, Chuch Dachis's book displays a 'panoramic adapter' (panalyzor) that went with the set.

Your SB-12 set may be an attachment to any one of military receivers that had a 455 KC output. It can be used with any receiver provided you properly take off the 455 kc IF signal.

AS long you value the R-390, you should value that SB-12 panalyzor for its capabilities.

1066. BC-1206 Setchel Carlson beacon receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-05 00:00:00 UTC
From: gsparks@ix.netcom.com
Message-ID: <5dasqk$poo@sjx-ixn5.ix.netcom.com>
Source record: 123055

I have been cleaning out junk on the request of my XYL, and am using any excuse to justify keeping an item.

I have a BC-1206 beacon receiver in good shape mechanically, haven't looked electrically.

It is listed as a 195 Khz to 425 Khz beacon receiver.

Does anyone know anything about this little critter?

How good of a receiver would it be if converted to lowfer band for CW?

I will take pictures of it both internal and external to include in the military listing. I already have the schematic posted there.

Thanks in advance

Glenn Sparks KI5GY

Hi Gang --

Looking for the BS-5 or BS-8 adapter for the Kenwood station monitor (scope) SM-220 which will give the regular scope a panoramic capability.

This piece would date back to the era of the TS-520/TS-820

Willing to pay $100. Check if you think you might have one. Thanks.

Given that you filter it witha narrow band PLL (1 mHz, yes
milli-hertz) PLL. Of course, you need a good VCXO.

If I were you, I would buy an old HP105.

.....It's an aircraft receiver (WW II?). Bought one MANY years ago for $1.95 brand new from a surplus dealer. Runs on 28V DC (think that's all you need - could be wrong on that). Equivalent to All-American 5-type radios, as far as performance.

The Heath rigs don't use a Cinch-Jones connector, they use octal-type
connectors (but the 11-pin model, rather than 8-pin). Which one does
your friend need, the male or the female (or both)? I may have extras
that I could spare for him.

This is my first time posting to a NewsGroup, so I hope I get it right! I have an old radio that belonged to my father and I would like to know more about it (when made, amount produced, value etc.) Can anyone out there help? Its a General Electric X-371 Receiver. It is a large table top radio 24inches wide, 15inches high, 15inches deep and weighs about 50lbs. It has a magahony cabinet with front speaker and shows 12 bands in a semi-circle in a front window. With it I have a booklet called "International General Electric Radio Handbook" produced by World Radio Handbook, this was prepared by O.Lund.Johnansen of Hellerup, Denmark. This radio would have arrived in our house about 1957-58. I live in Newfoundland in Canada and am interested in setting up the radio to listen to shortwave, and I would like help on type of antenna which would be best, cheapest, easiest to set up? Any help would be appreciated, thanks

That's sounds like a great radio. It was probably built before WWII,
in the 1930's. If the tubes are still good (and they *should* be), it
will give you many hours of pleasure. I would use a long wire antenna,
and be sure to ground the chassis IF there is a connection on the back
of the chassis. Be careful, though, some of these radios had a *HOT*
chassis (one side of the 115 v line is on the chassis)

>dpoynter@avalon.nf.ca

Hi Don,

The simple antenna solution is to hang as much wire in the sky as possible. Make it easy on yourself at first, and do it in stages until you see no further improvment at the lowest frequency you are interested in.

There is a more serious issue to be taken care of before the antenna. If this rig has not been turned on in a number of years, there may be a fire hazard. The filter caps in the power supply are undoubtedly getting on, and these items do not last forever. Flipping on the radio may give you a hiss and several stations, and give the impression of being in a working state. This may be a false security. There may also be no problem. The compelling evidence will be a small explosion (fully contained within the radio) and smoke and/or flames afterward if not unplugged.

The technical solution is to plug the radio into a variac and slooooowly raise the variac output over a period of hours (or days) from 0 to 115VAC. This will allow the old electrolytics to re-form their chemistry (if you are lucky) and let life continue as though no years have passed. Many of these radios work quite well after this slow wakeup call. Simple evidence of how robust they are is in the amount of 60/120 Hz hum you hear with everything turned all the way down. This can vary from zilch to Mt. Saint Helens rumble. Anything above 3 on the richter scale suggests replacement of these power components ($20 for parts (before markup) and $100 labor).

73's and happy DX'ing

These CDs are $12-15 each in Asia, retail in stores. Then often contain
beta versions and other stuff that's obsolete before you get it.

1091. Info on Knight R-55

Newsgroup: rec.radio.amateur.boatanchors

Source record: 123080

I'd like to get a schematic for a Knight R-55 SW receiver. It's a six-tube superhet (low-end, but not for Knight) sold during the mid-60's. The previous owner seems to have modified it a lot with less than desirable results.

Thanks! A. B. Bonds

Message-ID: <remler-0602971608250001@macferranti.atc.ll.mit.edu>
Source record: 123082

Available for FREE are a large collection of early Sams Photofacts, covering from approximately #20 to about #800. These are housed in a four-drawer file cabinet, and two original Sams 2-drawer file cabinets. The whole lot -- including the file cabinets -- are available for free. Pickup only in the Boston area. The collection is headed for the incinerator in two weeks.

Try the following URL:

http://personalwebs.myriad.net/gspubl/classlst.htm

do a search/find on the listing for BC-611

Also, look for Robert W. Downs, WA5CAB, in Houston.

He has some BC-611 stuff.

Cheers! Dave/K7HMP

<rwclark@rwclark.seanet.com> writes
>
>The technical solution is to plug the radio into a variac and slooooowly
>raise the variac output over a period of hours (or days) from 0 to 115VAC.
>This will allow the old electrolytics to re-form their chemistry (if you
>are lucky) and let life continue as though no years have passed.
Agreed.....

But runing up with a variac also reduces the fil voltage...so while it
puts less B+ on the caps it also reduces tube life...they dont like
being run at a lower voltage and develop "Cathode Scaling" (junk
deposited on the cathode that requires a period of OVERvoltage to
remove).

I always break the center tap of the B+ transformer and insert a series
of resistors, starting with 1Meg for a day, then 1/2 Meg..and so on thru
a few K until the Caps are fully reformed....

Of course if the poster of the origional int a teccie he could be
(un)pleasently shocked during the process!

WTB: Manual for U. S. Navy WWII vintage communication receivers, RBM-3. This unit is a pair of receivers, unit one from 200-2000khz, unit two from 2-20mhz. The units were manufactured by Stromberg-Carlson. The contractor was Westinghouse Electric. There were also units known as RBM-5, that are of the same line. The U.S. Navy also had a communication receiver know as RBS, which seems to be very similiar to the 2-20mhz unit. I have tried the various manual sources without success. I believe the receiver may have been orginally designed by RCA. There is a similarity to some of the other military RCA designs. Send email to clfsmith@snowline.net. Thanks, Cliff, K6JN.

This handbook is probably a collectors item. Johnansen is the
original editor of the World Radio and TV Handbook (WRTH) that
we buy every year. This year being the 50th year of the WRTH's
publication, they had a historical article about Johnansen and
his Handbook.

Enjoy!

1118. RA6790 Repair Problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-07 00:00:00 UTC
From: Dave & Sharon Pearson <skytron@ix.netcom.com>
Message-ID: <32FB0F97.487A@ix.netcom.com>
Source record: 123014
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors

I am in the process of repairing a RACAL RA6790/GM receiver I bought as is. I've made great progress in fixing the many problems this radio had. At this point the radio is working fine, it does everything it is suppost to do, except one. When I do the BITE check I get an error code 31, and 32. The manual states that this is a bad filter in position 1 and 2 or " the BITE frequency sweep underflowed while measuring filter (1 or 2) ". Does anyone know what this means and what circuity I should be looking at. I am checking all the circuits on the A4 board, but I can find no obvious problems.
Any help would be greatly appreciated.

Regards.

Dave Pearon

1120. SELL: Meters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-07 00:00:00 UTC
From: ross@hypertools.com
Message-ID: <5dle6k$6df$1@nadine.teleport.com>
Source record: 123016

BAfolk -

I have a whole bunch of meters which may be usable with R-390A and similar RXs.

These meters were removed from used RT-671/PRC-47 transceivers. They're all made by either DeJur (Model 131) or Ideal (also Model 131), and have a 1 3/4" square bezel with a 1 5/16" square hole pattern, the cast metal bezel is painted black. Scale is white text & graphic on black, upper scale is reasonably linear, with 8 major & 16 minor divisions. The lower scale is labelled "INPUT V." and has no real calibrations, lower 2/3 labelled "LO", upper 1/6 labelled "HI", and 1/6 of scale between "LO" and "HI" filled in with solid white.
They are a 50 microamp DC movement and all have a DC resistance of from 1000 Ohms to 2000 Ohms. Solder terminals on the rear, along with the text "SEALED DO NOT OPEN". The meter can be opened to get to the scale or to zero the pointer, but reassembly can be difficult (getting the rubber gasket to stay in place is tricky).
The bezels show some minor paint scratches, but nothing major. No mounting hardware or mounting gaskets.

I'd rate them about 7 or 8 out of 10. I'll sell tested ones for $18 each or $30 for a cosmetically matched pair, postpaid in the U.S. Please reply directly to me.

1123. FS: Test Equipment, Receivers, Audio Gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-07 00:00:00 UTC
From: Walt Novinger <waltn@earthlink.net>
Message-ID: <01bc1494$715f0820$94b22299@get.hooked.net>
Source record: 123089
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.swap

The following items from our collection of old receivers and test equipment are reluctantly being made available to clear space. Descriptions refer to cosmetic/physical condition. Most items have been tested and work; some receivers have been recapped and aligned. Write or call (403.241.6095 evenings/weekends between 0700 and 2200 MST, please) for specific details. All prices in US$, plus shipping from Calgary, Alberta Canada.

TEST EQUIPMENT

Universal Avometer, Model 8 MK III w/working instructions on back, very good to exc. condition (protective breaker inoperative), $65

Hickok Model 288X Universal Crystal Controlled Signal Generator w/cabinet, very good to exc. condition (one escutcheon broken) with copy of manual, $75

Seco VT Grid Circuit Tester Model GCT-8 very good to excellent condition, $35

Seco VT Grid Circuit Tester Model GCT-9, fair condition, $5

Phastron Model 777 VTVM, excellent condition, $15

Simpson Genescope Model 480 for FM-TV, very good to exc. condition, $70

Singer (Panoramic) MF-5/VR-4 Spectrum Analyzer with documentation, $125

Solar Model CBB, Type 2U capacitor checker w/wood case and leather strap and brass-like key closure, $65

Supreme Model 333 Deluxe Analyzer w/cord and cables in wood case, good condition, $85

RADIO EQUIPMENT

B&W Model 370 Single Sideband Adapter, $65

E.H. Scott speaker (matches SLR series), $95

Hallicrafters S-19R Sky Buddy receiver, very good to exc. condition, $125

Hallicrafters S-38B receiver, very good to exc. condition, $85

Hallicrafters SX-42 receiver w/R-42 speaker, very good to exc. condition, $340

Hallicrafters R-46B speaker, fair to good condition, $45

Hammarlund S-200 speaker (typically paired with HQ-180) very good condition, $85

RME 45B receiver with matching speaker, very good to exc. condition, $185

Sony Esaki Diode 11 Transistor FM/AM, Exc. condition w/black case and strap, $100

AUDIO EQUIPMENT

JBL D-130 15" speaker, excellent condition $150

Macintosh C-8 Preamp, good condition, $65

have the following to move out...(tucker is getting $1395.00 for this
unit)it was $6,000 new in 1990....

Fluke model 8502A with the following modules
installed:
controler (model blacked out)
Isolator/ext. trigger module 486415
fast R2 A/D converter module 383984
active filter module 383976
DC signal conditioner module 383901
current shunts module 383943

Digital Multimeter...6.5 digit display
math function..and more...I believe it's 6pps(m)
it must go....first $400 gets it shipped..continental US
others would be extra..
thank you

Try the rec.radio.amateur.boatanchors newsgroup. (boatanchor is the
affectionate name given to old, heavy tube radios.) There are a lot of
enthusiasts of old radios on that group. Someone there can give you
info on your X-371.

Everyone has their favorites. As for transceivers, I would
recommend these classics:

Heath SB102
Drake TR3 or TR4
Collins KWM-2
Swan 500C

Each has its pros and cons.
I think the Drake and Collins allow you to buy crystals for
almost any band, but none will have a true general coverage
receiver.

Date: 1997-02-08 00:00:00 UTC
From: Robin Birch <robin@falstaf.demon.co.uk>
Message-ID: <UBeSCAAe4L$yEw60@falstaf.demon.co.uk>
Source record: 123024
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

Dear All,
I am attempting to make a 1.2kV PSU for a WWII airborne TX (T1154) work. This PSU used to have a metal oxide rectifier in it. This has since gone west and I have replaced it with a load of silicon. This in itself works fine its just increased the volts by about 200!!!.

In addition, the regulation is c****p sorry - very poor. The TX is used for morse and to add insult to injury the VFO is unregulated, being fed directly from the HV rail. This means that as the current swings from key up to key down (about 20 - 200mA) the VFO moves to another band.

I want to add a regulator to the output of the PSU to allow it to stay closer to 1.2kV and have tried several approaches, all of which have failed. Can somebody help out. I want a design for a regulator that I can build into the PSU.

The PSU is a transformer, rectifier (full bridge) and two inductor/cap elements. I don't mind having non original bits inside the box but want to keep as much as I can.

I'm after example circuits - help, help, help.

>E-Mail Rex@g0mwh.demon.co.uk

Hi Rex,

The effect on the cathode you are speaking of is from long-term variations of nominal operating voltage. As to the life expectancy, it is quite the opposite. The age of a filament varies by the fourth power of the current applied to it. A 5% reduction of current will lead to a 22% increase of life. However, this is not a practical application for us given such life considering measures also have an impact on the cathode's ability to boil electrons off into the plate current. The cathode scaling you speak of is oxidation and a sign of the cathode being cool. I've commonly "descaled" cathodes by applying 1-2 Kv between the cathode and the first grid for 10-20 seconds, and minutes for a tough dog. These measures are of course last resort attempts not ongoing maintenance items.

Another posting alerted our friend to the ground hazard that may exist. This is a very real threat (it is a 70 V problem derived from the early practice of tying both side of AC mains to common through noise capacitors). When I was in the Navy, I was in charge of a TV/Radio repair project the Navy put on for S.F. charities. We took in 300 TVs and 200 Radios and turned out 125 TVs and 180 Radios in two months with a budget of $50. This was, for my students and staff, the University of Hard Knocks advanced studies program. Real electronics, not blackboard electronics.

One student learned about this hazard the hard way. He assumed that because our ground buss was so long, that it would support TV signals by merely attaching the antenna lines to it. I commended my student for his intuition as he plugged in the TV. We watched as the insulation on the wire drooped off like snow from a telephone line; smoke followed, and then a cheery red glow. It was very instructive (and one reason why I taught my men to keep one hand in their pocket, or behind their back; at sea, everything is at ground potential except you, the load).

Hmmmm....

This is most interesting, since Johnson did not produce their first amateur transmitter (the Viking I) until 1949. The Valiant was introduced in 1956.

Sooooo .. either the dates scribbled in the unit refer to some other significant life event of a former owner, or you have something other than a Johnson transmitter.

The company was founded in 1923, but they manufactured and sold parts until they entered the ham transmitter business in 1949.

What does this transmitter look like?? And PLEASE don't use it as a real boatanchor :-)

I was lucky enough to be able to pick up a National HRO-500 today at auction here in Helsinki. I'm hoping to find a manual photocopy for the receiver. I'd be happy to pay all costs for photocopying and mailing (and yes, I have a U.S. mailing address). Can someone help me out?

1146. HQ-100 Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-09 00:00:00 UTC
From: wmeara@erols.com
Message-ID: <32fe0a29.74617864@news.erols.com>
Source record: 122944

Anchorologists:

I've had a lot of fun working on my old HQ-100. I bought this radio in the Dominican Republic a couple of years ago. I've had to replace two IF cans, the audio output transformer, the electrolytic and a number of other parts. Yesterday, armed with my Eico signal generator and Heath VTVM, I did an IF alignment. The cans were quite a bit off and there was a noticeable improvement in receiver performance. It was kind of fun to tweak the old rig using old test gear. I calibrated the EICO using a modern PLL radio with digital output.

I'm now ready to do the RF alignment, but I need some info on those wierd RF cans with two slugs both of which are accessed from above. I can see the top slugs and have a dip stick to turn them, but where are the bottom slugs? How far down? How do you know when you're turning the bottom one? I know that twisting these things is a hazardous business so I need some advice on how to proceed.

Second question for other HQ-100 owners: Is the selectivity pot supposed to have a "click" switch position at the far end of its range (full clockwise)(to put it in the BFO position)? Or do you just put the pot at full clockwise and let the Q multiplier go into isolation? (Mine does not click at the end of its range.)

Third question: My HQ-100 manual describes how the crystal calibrator can be converted into a BFO by putting a 455 khz crystal in place of the 100Khz rock (and then coupling the calibrator output in to the IF strip). The idea seems to be to take advantage of the narrow, pre-oscillation IF skirt coming from the Q multiplier (while using the calibrator cum BFO to beat the incoming CW/SSB signal). Anyone have any experience with this kind of arrangement?

Now that I've got the IF and Q multiplier stages aligned, it is fun to use the Q multiplier/BFO arrangement. I've never used one, but I imagine this is similar to using an old regen receiver.

1147. DX-60B Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-09 00:00:00 UTC
From: wmeara@erols.com
Message-ID: <32fe0a9a.74731284@news.erols.com>
Source record: 122945

Anchorologists:

Snow is falling in the nations's capital and I am hibernating in the hamshack. I started fooling with a DX-60B that I picked up at a hamfest a few weeks ago.
I don't have a manual yet, but trapped as I am in the house, I decided to check out the transmitter.

Its in pretty good shape. Everything lights up, the caps are OK, and there is B+. I can get around 50 watts out on 40 meters.

A couple of questions:

There seems to be some sort of wierd keying arrangement in this rig. Without a key plugged in, it is in key down condition. When I ground the line to the key jack, the rig goes key up. It is kind of backwards. Also, the key jack is a BNC. Wierd. Is this the setup for some sort of keyer or RTTY arrangement? How can I get it back to normal. What are all those diodes and transistors on the terminal strip near the center of the chassis (topside)?

What kind of microphone should I use with this rig? I've experimented with a D-104, but I can't seem to get it to modulate. Power out drops to about 10 watts when I switch from CW to AM. I think it is supposed to do that, correct?
Any help or advice would be much appreciated.

No need to do it unless you have a bad ballast tube and cannot locate
another. In theory, the only alignments which might charge are:

PTO endpoints
PTO linearity
1st XTAL oscillator output

In any case, if you were to replace V401 and V701, you'd want to at
least check these aligments.

First thought is a (stack of ?) zener/resistor to reg the vfo. Would be
feasable if not too much current is required.

If you must regulate the HV...
Can't think of a specific circuit published somewhere, but wonder if
regulating (using) the ac line input would work... Feed back a sensing
line/circuit from the hvdc to the control of a triac on the line in.

To All BA'ers,

Many BA items are in the upcoming Estate Auction, Feb 15th., in Havertown, PA, near Philadelphia. A large selection of antique radios, Ham Radio Equipment, Box-lots of parts, tubes and everything you always wanted!

There is a L-i-s-t o-f A-u-c-t-i-o-n items on the NJARC Web Page.
==========

Got to: http://www.globalent.net/oldradio

Then click on the Delaware Valley Historic Radio Swap-meet and Auction Button. You will go to an announcement page with a map to the meet. There you will be able to click on a preliminary list of over 100 radio items which were cataloged in late January.

The DVHRC is sponsoring this Swap-Meet and Auction. They have many more items for the auction which are uncataloged due to this being a club/volunteer function.

The meet starts at 8 and the auction is at noon. It's all indoors!

Does anyone out there have info on the following set of US Navy
publications?

TITLE: Fundamentals of Electronics

OTHER ID INFO: NAVPERS 93400A
Bureau of Naval Personnel
Washington, DC
APRIL 1965

VOLUMES:

Vol 1a Basic Electronics, Direct Current
Vol 1b Basic Electronics, Alternating Current
Vol 2 Power Supplies & Amplifiers
Vol 3 Transmitter Circuit Applications
Vol 4 Receiver Circuit Applications
Vol 5 Oscilloscope Circuit Applications
Vol 6 Microwave Circuit Applications
Vol 7 Electromagnetic Circuits and Devices
Vol 8 Tables and Master Index

Each of these volumes was printed in the 8.5" X 11" format and had a
light-blue hard cover that was spiral bound to the pages. This type of
binding allowed each text to easily lie flat on the desk when in use.

I found Vol 3 at a garage sale, and after reading through it was impressed
enough to try to find the other volumes.

NOTE: These are texts of "programmed" instruction, in that they present
anywhere from 2 to 5 questions after each new concept is described.
Answers to the questions appear on the next even-numbered page. A
nice approach for people seeing this stuff for the first time.

Can anyone out there help me ID and possibly locate a complete set of
these texts?

73s,

Jacob Worthington

Source record: 122957
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS/FT: Collins ART-13

I have for sale/trade an ART-13. It is original, complete and in very good physical condition. The front plaque says,"MX-128/ART13, NXsa-45461 2817:CZR". The right panel plaque says "T-47A/ART-13, SN 10393:CWS, Order No. 596-Day-44. It includes the bottom rack mount, MT-283/284 ART-13, but no cables. I also have an original manual which covers the AN/ART-13, 13A and 13B and Navy ATC/ATC-1. It is dated 17 Sept 1944, Revised 27 August 1952. I have not operated this piece of equipment.

Obviously shipping would be a joy for any UPS courier, therefore I prefer local pickup in SOCAL. I will ship if the buyer wants to pay shipping and packing costs.

I am interested in trading for Collins amateur accessories, so use your imagination and tell me what you have to trade. Cash offers accepted.

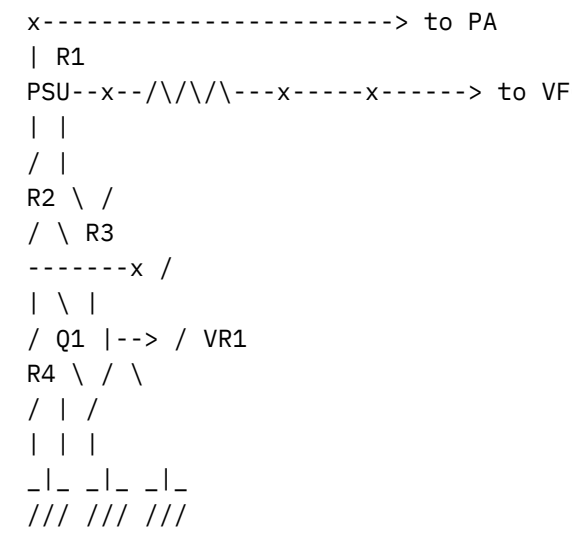
>_Woody_

I've tried that approach. It can work Ok with a steady load, but the
dynamic regulation is poor due to being restricted to switching at the
line frequency. It isn't a good solution in this case.

Probably the best solution is a shunt regulator. The real problem here
is the high key up voltage. So loading the supply will pull that down.
Even a heavy bleeder resistor would do wonders. Changing the power supply
to choke input filtering would also help this problem.

We really don't care much that the voltage varies to the PA. The
real issue here is the VFO as you noted. I'd suggest separating its
power feed and feeding it via a shunt regulator. That won't require
dissipating much power, since the current draw of the VFO is only
about 0.02 A. A stack of zeners can be used, or you can use a transistor
as a dynamic load. Here's an example circuit:



Select R1 to drop 300 volts at 30mA, IE make it 10k. Select
R2 to drop 900 volts at 30mA, IE make it 30k. R3 should be
about 300k, and VR1 should be about 10k. Adjust VR1 to set

the desired regulated voltage. I'd suggest regulating for
1 kV to the VFO. Use a transistor with a CE breakdown of at
least 350 volts, a TV horizontal output transistor will do
nicely. R4 should be 10k, and will limit the voltage across
Q1 when the regulator is heavily loaded and Q1 is biased
nearly out of conduction.

These values are just crude off the top of my head numbers.
If you want to carefully analyze the circuit, you may be
able to choose more optimized values. But these should
work if we assume the VFO draws 20 mils. The idea is to
size R1 so that more current than the load requires has
to be drawn to achieve the necessary voltage drop. This
gives the shunt regulator something to work with.

Gary

Message-ID: <5dlds6$n8v@Raven.und.ac.za>
Source record: 122960

I have been given a Panasonic RF3100 and it seems to be dead or almost so on shortwave. Would appreciate any information on this set. Including history, mods, repair and experiences. I have searched the web and found alsolutly no information at all. If any pointers are known, please let me know.

The repair: A check of all stages show that they are working to some degree. The LA7254 dbl bal mixer seems to be the culpret but replacement makes no difference to the set. Some devices have been replaced in the RF amp section but these all have some gain. The second mixer is used for AM and that works fine.

Help and insperation required please, by e-mail if possible as my news server is down and out.

Source record: 122962

Hi. I've this 6m AM rig that I picked up, and it doesn't seem to be modulating adequately.

Anyone out there have the HE45B, and/or could tell me how the following tubes function in the circuit?

1. There is a 7868, which is a power pentode. Not sure but perhaps it's the modulator. It gets squealy quite often when I key up.

2. One 6CN7, can't tell what it is performing as.

3. One 6U8A/6EA8, apparently the speech amp, as it is most closely linked to the mic inputs.

I haven't picked up a manual for this yet.

I would also be interested in info on how the rig should "behave" in loading up. I've gotten approx. mid-scale readings on RF meter setting.

With meter in "S" position, it pegs full scale upon keying the mic. Sometimes I have noticed the meter fluctuating downward from full-scale with modulation, but it is very intermittent. Usually it just stays fully pegged.

Any info appreciated. The rig is in excellent shape and seems to be functioning well with the matching vfo.

Thanks very much, 73,

Joel N1AEP Freeville, NY FN12

>Don Poynter
>dpoynter@avalon.nf.ca

Don - This sounds like an interesting radio. It shouldn't take much of an antenna for you to get European stations. You could get a 20 foot (7 meters) length of any kind of wire and hook it on to the antenna terminal(s) and see what happens. It would be helpful to know what kind of terminals are on the back of the radio. Also, when you start using it for more demanding applications (like SW), you might find that some of the tubes are too deteriorated to perform well. They may need testing and replacement.

What does the "International General Electric Radio Handbook" say about antennas? Is this a manual for this radio, or a general short wave manual?

Cheers

Dave, K9SW

You can buy the same stuff at any welding supply house. I think the
alloy is high in cadmium, which gives a low melting point, but the
secret is in the flux which is effective on aluminum oxides. I have
used this flux successfully with standard electronic 62/38 tin/lead
solder to solder aluminum.

The product I bought was sold by Allstate, but I know that Welco makes
a similar package. I suspect that if you just ask for low temperature
aluminum solder they'll have what you need.

Source record: 122895

If you have a Hickok 539C, 580, 752A, 700 Cardomatic, military model, etc. in
good condition that you wish to swap for my Panasonic KX-P1595 Multi-Mode
Office Duty printer, let's communicate. You might not realize that you could
use it, please read on!

Many folks think dot matrix is passe, but not so. The reasoning follows:

WHY BUY A WIDE CARRIAGE COMMERICAL QUALITY OFFICE PRINTER ANYWAYS???

(I use a simple printer switch box between my laser and dot martix to save $)

* CHEAPEST TYPE OF PRINTER TO OPERATE for draft printing compared to wasting
your expensive laser or inkjet cartridge on drafts. Use them for the final
copy only. Ribbons are $2.89 each in boxes of six!!! Call MEI/Micro Center
1-800-634-3478 and you'll see.

* BE ENVIRONMENTALLY CONSCIOUS. Use any paper you want for drafts. Recycle
regular or the 15 inch wide carriage computer printouts from the office,
just print on the reverse blank side. You can also feed the printer
recycled cut-sheet paper as well. Great savings on paper costs if you print
alot and hate reading stuff off your screen.

* Businesses still use them for cost savings reasons and to print multi-part
forms and for inexpensive dot-matrix mail labels. The approximately
equivalent current wide carriage model, the Panasonic KX-P3626, sells for
$420 in the Office Max Catalog and has a list price of $520.

* Dot-matrix printers can print a page from a web site on-line a lot quicker
than a laser many times. The reason is that you must wait for the laser to
process the entire page, whereas the dot matrix prints it out line by line.

I have 2 MB of ram on my NEC 95f Office Duty Laser and have found this to be
true. Of course no dot matrix will yield the print quality of a laser, but
one makes compromises, if it's only for one's own reference.

* Dot Matrix is great if you are using your modem with, for example, the
library to download cites, articles, etc. With a laser you can't print a
line at a time, you must print the whole page, but the dot matrix
economically does your cites a line at a time.

* Durability, the high quality office wide carriage units generally don't
break, they just keep on ticking!

* The wide carriage is great for printing many-column spread sheets
(businesses use them for this too)

OKAY Here's the Panasonic's Specs:

- Works with Windows 3.1 or Windows 95 - You select driver from Windows
- 15 inch wide carriage
- 9 Pin Dot Matrix
- Weight = about 35 lbs.
- Friction or tractor feed of any width paper up to 15 inches.
- Form Length: 3 inches to 12 inches via a form length dial or via your
software
- Pitches Built In: 10, 12, 15, 17 per inch and Proportional Spacing
- Fonts: Draft, Bold PS, Courier
- Controls: On Line
Form Feed
Line Feed
- Pararell Printer Port:
- Has Optional Serial Port:
- Rear Paper Bail:
- Single Sheet Feeder:

This unit is in good cond. and is worth $250. If you are not interested in
swapping, I will gladly consider reasonable offers on the unit & you pay
shipping.

If interested, please email me at:

l.mclaughlin@popmail.csuohio.edu

Thank you.

weather
sat picture in the 136 mhz is greater than most scanners can handle
without modifications. You would most likely only get part of the
picture (if any at all, assuming the sync pulse wasn't chopped as well).I
would be interested in knowing how you modified the Pro62 to handle this.

1203. Custom 4CX1000 Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-10 00:00:00 UTC
From: Dale Powell <powell@polarnet.com>
Message-ID: <32FFCE3E.2245@polarnet.com>
Source record: 122991
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.antenna, rec.radio.swap,rec.radio.amateur.dx,rec.radio.amateur.misc

For sale: Custom built 4CX1000 amplifier. Consists of separate RF deck, control panel, and PS. RF deck uses motor driven vacuum variable cap and roller inductor, with potentiometer feedback for LED indicators on control panel. Will cover 10-160 meters, has input pad to prevent overdriving, 15 watts in will produce approx 1500 out at 3000 VDC. Control panel has large meters for plate voltage and current, bias voltage and grid current. Power supply components included but not built. Blower included and mounts remote of RF deck. Could mount entire system in rack, or use RF deck remote of operating position.

Prefer trade for legal limit desktop amplifier or ??? Make cash offer.

Mike,
This is a matter of a simple IF filter replacement for most
scanners. Although wideband IF filters are not available at your local
Radio Shack, they are available from several mail order places. A
detailed description on how to do this appears in the Weather Satellite
Handbook by Taggart.

They're probably similar to type 71A, which is a common audio output
tube for late 1920's radios. These go for about $15 each used.
Look under 71, 71A, 171, or 171A. The "3" prefix usually meant the
tube was manufactured under a Cunningham license, the "1" prefix meant
RCA license, no prefix meant original license.

Today is usesd my scanner Bearcat UBC 9000 XLT and the program WXSAT
(soundblaster) to receive NOAA pictures.
It works GREAT !!! I get the compleet pictures, a friend of me have a
real NOAA receiver and we putt the two pictures together and they are
the same. So my scanner works great to receive weather sattelites on
+137 Mhz.

No modifications on my scanner, and i use a normal dualband antenne for
144 Mhz and 440 Mhz.

William

Hi All,
Looking for an antenna relay to switch an old
amplifer (600L) in and out. Sure I could use
2 relays but one provides a greater level of
comfort. 115V coil is best

This relay is sometimes called a transfer relay

Thanks
Tim wb1exg

Pat:

You have to be very careful when cleaning dials. Its a real bummer to
have the calibration marks come off. Even Windex can do it. I suggest
that you use some ordinary soap and water on a Q-tip and go slooooowly.

Michael, W1RC

A tip o' the hat to Dave Stinson for finding a BC-453 for me.

However, there's a few bits 'n pieces that I need to get this puppy
back in service as a Q-5er (ala mid 60's goodies).

1. that little hand crank for the tuning shaft on the front panel.
2. A schematic would help immeasurably. :-)
3. A dead dynamotor for the base pate is something I could use.

Thanks a bunch, check behind yer benches and under the dresser.

73 es GA from Jeff

1239. R390/390A Meter Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-12 00:00:00 UTC
From: "JOHN L. BERENYI" <berenyi@texas.dseg.ti.com>
Message-ID: <3301DBE3.1CB2@texas.dseg.ti.com>
Source record: 122929

Hello 390/A Experts,

I've always been curious about the color of the numbers and needles on their meters. Over the years I've seen many R390's and the meters can go from white to a dark manilla color and was wondering if this is intentional or in part due to the age and deterioration of the pigment. I've seen first run Collins rigs still show the numbers as white and other later models that are manilla in color. This seems puzzling to me. Looking forward to hearing from you guys.

Regards,

John

Try repeated thin spray applilcations of Armor-all -- let it set 12-24
hrs between applications, and blot -- don't rub or scrape -- with a
lint free paper towel. Avoid alcohol or detergent based cleaners.

In article <UBeSCAAe4L$yEw60@falstaf.demon.co.uk>, Robin Birch
<robin@falstaf.demon.co.uk> writes
Dear ALl,
Thanks for the notes. The problem is that I am trying to keep the guts
of the TX itself as original as possible so Ideally I don't want to
affect the circuit.

The idea of shunt regulation had occured to me but my attempt at this
wouldn't regulate properly cos I don't think I understand enough about
circuit design for high power FETs.

If someone has got a sketch for something to do this or a series reg I
would be grateful. The PSU has two stages of leading choke and Cap
filtering after the transformer.

Cheers Again

Robin

One of the best. It was used extensively by the military in WWII.
It's one of the best for high quality audio purposes that I've used.
The combination of the continuously variable bandwidth and the push-pull
audio output stages make for an excellent sounding radio.

Condition about 7. They are original. They work (I've used them regularly for the last few months). They do need cleaning-up. There is some corrosion on the chassis of the HW-16 that needs attention to make the rig really nice. They are not beaten-up, but they aren't pristine either. There are copies of the manuals. They've not been modified.

Price: $105 + shipping.

-Mark K0EX

PS - just bought a new HF rig, so need to get these a new home.

They are basically high-power 6V6's, and are used in several extremely popular stereo amplifiers, including the McIntosh MC225 and some Fisher units. Good for about 25-30 watts the pair. New examples run from $30-60 each. You should post the availability to rec.antiques.radio+phono and rec.audio.high-end. Now that I've brought you the good news, how about a deal on a set of 4? :)

Picked up an SX-117 and HT-44 in real nice condition but someone painted the cabinets. While the paint job was well done I don't think it is the correct finish or color.

Can anyone help this purist? I would like to redo the cabinets to original factory (grey) condition. Did Hallicrafters use a wrinkle finish on these sets? Perhaps someone can tell me what paint product will do the job.

Thanks for reading.

The color is due to luminescent paint, a mixture of phosphors and
radioactive elements, usually mesothorium. It's possible the first
run rigs used a whiter mixture, or the later ones used a mixture that
yellowed with age.

Just be sure to NOT mess with the meters. They put out only a
middling amount of radioactivity (about 3 millirems at 6 inches) which
isnt too bad. But if you open one up, you will release a lot of
accumulated radon gas, plus the chance to inhale any flaked off
radioactive paint. Not good.

I have a mint R-390A ser no. 4640, and my meters are black with a white
scale. Are these original ??? I heard the meters had radium on them,
and might be the reason for govt removal.

UPS tire tracks to the garage. Look inside..big crate. 1st R-390A
just arrived...Motorola order no. 363-PH-54.

No dents, no scratches, no dings of any kind on front panel, both
original meters, all knobs es everything turns freely.

What's the best advice..after days in the cold getting to below-zero
Minnesota in back of UPS truck, warm it up and dry it out for a couple of
days? slowly percolate her with the variac for a few hours after that?
what instead or what in addition to this for the initial fire test?

I'm in my happy place.

Gary,

Congratulations! There's a procedure in the 390A manual for checking shorts prior to powerup. If I remember correctly you remove a tube from the AF deck (with power off of course) and check resistance to ground for a couple of pins. If you don't have the manual, let me know and I'll be happy to look it up. It wouldn't hurt to let it warm up/dry out for a while. I'd start with a thorough visual inspection for burnt components, loose connections, etc. Make sure the ovens are off, and there's a 2A fuse installed. Some models have low current fuses in the B+ and B- lines.

There are mixed opinions about slow power up with a variac. Some folks feel this can stress the tubes. After checking for shorts, I would probably just power it up with about 105-110 Vac. The 'function' microswitch tends to weld, so I normally power up with the variac power switch.

Good luck.

Bryan

I have an old Schafer electronic clock system that was used to drive the automation system at WGHB-AM in Farmville NC until about 1982. It was working fine when removed. It uses "nixie" display tubes and an interesting electromechanical ticktock movement. Not an IC in sight. Does anybody have any idea what this would be worth nowadays? It would be good for hams or experimenters that need a regular clock pulse.

Deoxit works very well for this purpose. There are several different types made. I use the Deoxit D-5 formula most often. It is made by Caig; you can check out their web page at http://www.caig.com.

No connection with Caig, just a satisfied user of their products.

You have to be ultra-careful, depending on the radio. Collins
may have sturdy markings, but there are plenty of radios which used
water-soluble inks on the dial markings. For example, if you take
even a slightly damp cloth to a Philco's dial, the markings will come
off at the first wipe. Don't ask me how I know this!!

Message-ID: <19970214180001.NAA22839@ladder01.news.aol.com>
Source record: 122879

Hi Bill. I owned a DX-60B years ago and have a few comments. First, it is "normal" for the rig to key down when the key jack is removed. This was intended, I believe, for AM operation where you don't have a code key connected and simply switch the mode switch to AM and talk.

There were NO transistors in a DX-60B, so I suspect your rig has a mod of some sort if you have some. Are you sure they're transistors? There were some silicon rectifiers (4 I think) near the power transformer for the power supply. The BNC connector is definately not original, a 1/4inch jack was original for the key.

Good luck, its a simple but reliable transmitter.

Condition about 7. They are original. They work (I've used them regularly for the last few months). They do need cleaning-up. There is some corrosion on the chassis of the HW-16 that needs attention to make the rig really nice. They are not beaten-up, but they aren't pristine either. There are copies of the manuals. They've not been modified.

Price: $105 + shipping.

-Mark K0EX

PS - just bought a new HF rig, so need to get these a new home.

Yes, very much the same. The biggest difference the the audio output
arrangement. The 200 required an electro-dynamic speaker of 600 Ohms
impedance. The 400 uses a dynamic speaker.

1293. RCA radio from the 60s-which one?

Newsgroup: rec.radio.amateur.boatanchors

A friend of mine has nostalgia pains for an old RCA general coverage receiver he used aboard ship in the early 1960s. unfortunately he cannot remember the model number. If anyone has any info about what this receiver might me be, pls let me know.

RCA general coverage receiver circa 1960. 30 bands, each covering 1 MHZ. 10" slide rule dial with a small window to display the band selection. Table top model with self contained power supply and meant for commercial and shipboard operators. Approx 19"L x 12" H x 18" D.

1296. SWAP FOR TUBE TESTER -- COMPUTER EQUIP.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-14 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <5e1l5m$fr5@csu-b.csuohio.edu>
Source record: 122886

If you have a mutual conductance tube tester such a Hickok, Triplett, B&K, Precision, RCA, Military Unit, etc. that you wish to swap for my Panasonic KX-P1595 Multi-Mode Office Duty printer, let's communicate. Or I'll consider ALL offers to buy my Panasonic outright.

YOU MIGHT NOT REALIZE THAT YOU COULD USE IT, PLEASE READ ON!

Many folks think dot matrix is passe, but not so. The reasoning follows:

WHY BUY A WIDE CARRIAGE COMMERICAL QUALITY OFFICE PRINTER ANYWAYS???

(I use a simple printer switch box between my laser and dot martix to save $)

* CHEAPEST TYPE OF PRINTER TO OPERATE for draft printing compared to wasting your expensive laser or inkjet cartridge on drafts. Use them for the final copy only. Ribbons are $2.89 each in boxes of six!!! Call MEI/Micro Center 1-800-634-3478 and you'll see.

* BE ENVIRONMENTALLY CONSCIOUS. Use any paper you want for drafts. Recycle regular or the 15 inch wide carriage computer printouts from the office, just print on the reverse blank side. You can also feed the printer recycled cut-sheet paper as well. Great savings on paper costs if you print alot and hate reading stuff off your screen.

* Dot Matrix is great if you or your kids are using your modem with, for example, the library to download cites, articles, etc. for school or hobbies. With a laser you can't print a line at a time, you must print the whole page, but the dot matrix economically does your cites a line at a time.

* Businesses still use them for cost savings reasons and to print multi-part forms and for inexpensive dot-matrix mail labels. The approximately equivalent current wide carriage model, the Panasonic KX-P3626, sells for $420 in the 1997 Office Max Catalog and has a list price of $520.

* Dot-matrix printers can print a page from a web site on-line a lot quicker than a laser many times. The reason is that you must wait for the laser to process the entire

page, whereas the dot matrix prints it out line by line. I have 2 MB of ram on my NEC 95f Office Duty Laser and have found this to be true. Of course no dot matrix will yield the print quality of a laser, but one makes compromises, if it's only for one's own reference.

* Durability, the high quality office wide carriage units generally don't break, they just keep on ticking!

* The wide carriage is great for printing many-column spread sheets (businesses use them for this too)

OKAY Here's the Panasonic's Specs:

- Works with Windows 3.1 or Windows 95 - You select driver from Windows
- 15 inch wide carriage
- 9 Pin Dot Matrix
- Weight = about 35 lbs.
- Friction or tractor feed of any width paper up to 15 inches.
- Form Length: 3 inches to 12 inches via a form length dial or via your software
- Pitches Built In: 10, 12, 15, 17 per inch and Proportional Spacing
- Fonts: Draft, Bold PS, Courier
- Controls: On Line
Form Feed
Line Feed
- Pararell Printer Port:
- Has Optional Serial Port:
- Rear Paper Bail:
- Single Sheet Feeder:

Good cond. TO SAVE ON YOUR SHIPPPING COSTS, I'll pack it and bring it DIRECTLY to a U.P.S. terminal, thus shipping it via "the least expensive way". As you may be aware if you bring it to Mail Boxes, Etc., the total shipping costs using U.P.S. can be more than double the total shipping bill if you packed it and brought the package to the U.P.S. terminal yourself. Mail Boxes, Etc. marks up the U.P.S. fees and obviously must charge for packaging too.

If interested, please email me at:

l.mclaughlin@popmail.csuohio.edu

Thank you.

Hi Art -- not sure of the question, but there is a listing of
frequencies for HF nets on one of the DX Reference Pages that includes
Old Time Radios, Collins Gear, Radios That Glow in the Dark etc. Check
URL:

http://pw2.netcom.com/~ac6v/pagep.html
Hope this helps
Good Luck

1302. FS: Collins PM-2 AC power supply for KWM-2/2A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-15 00:00:00 UTC
From: mc@shore.net
Message-ID: <5e4r9a$pkc@northshore.shore.net>
Source record: 122799
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have an extra Collins PM-2 AC power supply for the KWM-2/2A transciever. This is the one that attaches to the back of the KWM-2/2A and is used in the portable Suitcase Station that fits inside the CC-2 Samsonite carrying case.

The PM-2 has a loudspeaker built in and is in clean condition. It is not military surplus. Price is $100.00 plus UPS.

If interested please reply by e-mail.

mc@shore.net

1303. FS: Collins mechanical filter.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-15 00:00:00 UTC
From: mc@shore.net
Message-ID: <5e4see$lm@northshore.shore.net>
Source record: 122800
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a Collins mechanical filter that is surplus to my needs...

F-455Q-2 Collins part number 526-9309-00

2.0 KHz @ -6dB 5.6 KHz @ -60dB

Filter is housed in the 'Y' case which is a small metal cylinder. The
'Y' case filters were used in the early KWM-2s and 75S-1 and 3 receivers.

The 1976 Collins-Rockwell mechanical filter engineering bulletin shows
this filter as 1.6 KHz @ -6dB.

Either way it would be an excellent narrow SSB filter, good RTTY filter or
wide CW filter for any receiver with a 455 KHz IF.

Price is $75.00 with postage paid in the United States.

If interested please reply by e-mail.

Source record: 122801

My cousin has aquired a Johnson Viking Navigator. He didn't state if it was a Receiver, Transmitter, or both. Nor does he have any paperwork on it, so is reluctant to hook it up until he can obtain such. If anyone can assist in this matter, please EMail me. He likes to tinker with electronics, and if it has receive capability, I'm going to assume he'll be using it for possible shortwave listening as he has another SW radio also.
Thanks,
Eric

1305. WTB: SK-800(B), SK-600(A) sockets

Hello and thanks for reading this message!

A friend of mine, without Internet access, wants to buy a socket for the 4CX1000A or 4CX1500B tube. The Eimac reference is SK-800. He is also looking for a SK-806 chimney.

Another interesting sockets for him are the SK-600(A) and its corresponding chimney, SK-606. These are suitable for 4CX250B and similar tubes.

Sockets and chimneys don't need to be new and the grid capacitor could be also broken.

Please, e-mail offers stating condition and price to eb5agv@ctv.es

THANKS!

Best regards.

JOSE

Hi Art - There are a group of Glowbuggers nightly on 3579 kc using homebrewed Hartley xmtrs and regen rcvrs (but any other equipment is certainly welcome!). That freq'y was chosen due to xtals for it being easily available (any color TV set has one). They also have a 40m and 160m freq'y too I can't recall them right now. Maybe Boatanchor Bob is reading the mail here and will provide those other freq'ys and times.

Reminder: There is an email list devoted to building and operating tube gear; to subscribe send an email to listproc@theporch.com and only write:
subscribe glowbugs your-name-here
and you'll be hooked up. To send a message to the gang use the address glowbugs@theporch.com.

1325. power transformer for Hammarlund HQ-180AC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-16 00:00:00 UTC
From: Phil Nelson <philn@accessone.com>
Message-ID: <01bc1bca$c8308ce0$5445facc@philn3>
Source record: 122815

The main power transformer in my Hammarlund HQ-180AC
just gave up the ghost. The Antique Electronic Supply catalog
doesn't seem to have one of the right size or specs. This is a
large horizontal type transformer supplying 300v DC and 6.3v AC,
as near as I can figure out. The attachment screws are centered
at 3 1/8 and 2 1/2 inches.

Any recommendations?

Thanks!

Phil Nelson

As a shipboard user of Mackay equipment, I'm familiar with most of
their models - but I've not seen the MSR-8000. It must be a fairly
recent model since their model nomenclature was in the range
of MSR-4030, 5030, etc as little as 6 years ago. The MSR, in effect,
stood for "marine shipboard receiver".

I believe that the main office of Mackay Communications, Inc
is in Raleigh, N.C.

Perhaps this is a newer transceiver designed to meet the new
GMDSS standards?? Most of their equipment is made for and
sold to the commercial shipping marker - not the military.

The new unit pricing on their receivers/lower power transceivers
runs in the range of $5000 to $8000 - they don't give much away.
Their high power 1KW units were priced as high as $22,000/ea.

I finally have time to take a closer look at the R-390A I bought myself right after Christmas this weekend. I pulled C603 and C606 and put them on a current-limited supply to re-form the electrolytic, then re-install them. As recommended by another poster in this group, I then start checking for shorts in the B+ line, following paragraph 41 in the depot maintenance manual.

After one false alarm (I had the polarity of the ohmmeter leads forward-biasing the (solid-stated by the Navy) rectifiers in the power supply module, something that wouldn't matter when they were tubes), I hit the measurement at J512-2 on the IF subchassis.

Should be infinite... Dammit! 50K.

Hmmm, 50K is quite high, but there's other measurements listed at 90K and 92K, so they obviously are expecting one to check for high resistances, and high != infinite. So something's wrong.

Start pulling the tubes suggested, measuring after each one: nope, nope, nope, nope, nope, nope, nope, and nope. Drat. That means it's IF subchassis removal time.

Remove subchassis. Inspect wiring for obvious faults. Someone's been in there doing repairs and they were a little clumsy with the soldering iron (some amateurish solder joints and burn marks on wire insulation), but nothing looks obviously amiss. It's going to be a troubleshooting session with the ohmmeter, so fold out the schematic and study it.

Notice R514, R515, R520, and R550. Notice that the first two and the last two are both in series with each other, B+, and ground. Notice that rated series resistance in both cases is near 109K. Notice that they are 10% tolerance resistors. Notice that 50 is within 10% of 54.5. Grrrr.

Moral: always take the tests in the Depot Maintenance Manual with a grain of salt. Always check the schematic of the circuit being tested to see if the normal result indicated makes sense.

I just recently acquired an SX-32. It is going to need a little bit of work to get it into prime shape. Of those of you that have restored these receivers did you run into any particular problems?

I need to get some information on the front panel and case paint. I will have to repaint both. So if you know the formula for the paint or if anyone knows where to acquire it please let me know.

There are no missing items, but the skit on the band changes knob is broken, if your have a knob please. Or, if you know how or have had experience at repairing bakelite please advise. The part of the skirt that has broekn off is missing, so I cannot just reglue it.

Please respond to RobertC908@AOL.COM

I have not....but would like to own one....it was also built in the UK
and here was dubbed the "Clansman (HF)"...and was a Brit Military Radio
used up till quite recently.

ITT's operation here was done by Racal.....who also make fine stuff!

The last one I saw was in good condx...and cost 450UK Pounds...about
$700..(Mailer wont let me send the UK Pound symbol!)..and that was in
1994...

Anyone got one spare...hope/hope...let me know! PLEASE!!! ï¿½ & $ await
you!.......Take that mailer device....I want to say "ï¿½"!

1336. 813 Linear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-16 00:00:00 UTC
From: artus@worldnet.att.net
Message-ID: <33073ea8.712834@netnews.worldnet.att.net>
Source record: 122826

I was recently given an old Homebrew amp using a pair of 813's. I have noted a couple of posts talking about grounded-grid arrangement for the 813's. I wonder if someone has some notes on this type of application including 813 manufacturers info, schematics, load resistance info, etc. The RF deck looks to be a PI arrangement and I was thinking of modifiying it to a pi-l. No power supply was given; so I will be looking to build one up (some thought to a switching supply-- any experience.) Overall if it appears to be a major $ sink project, I may abandon it and find a SB-220 or 200 to play with.
Thanks
Jack (W0FNQ)

Need some test equipment for BA, HB, repair, ???

HP3586B Selective level meter.

Frequency range of 50 Hz to 32.5 MHz (75 Ohms unbalanced), 4 kHz to 1
MHz (150 Ohms balanced) & 200 Hz to 100 kHz (600 Ohms balanced).
Amplitude +20 to -130 dBm, Resolution 0.1 Hz, Accuracy ï¿½(1x10-5/year),
Harmonic Distortion -70 dB below full scale,
fully programmable over HP-IB.
Makes a great SW receiver too! With a BPF on the front one can hear
all sorts of neat MT stuff around 10kHz.

HP3336B Selective level generator.

Frequency range of 10 Hz to 21 MHz. Outputs for 75 Ohms, 124 Ohms, 135
Ohms & 600 Ohms, fully programmable over HP-IB
+10 to -120 dBm and will track with 3586B.
Will also sweep.

Bought two sets and am keeping one and selling one.
Also looking for manuals for these.

Best offer over $1500.00
Selling pair only.

In Atlanta.

Source record: 122837

Just what you need for a 1950s sci-fi set. I have four Racal RA-6396
frequency indicators, still new in boxes but without manuals, or more
importantly, those circular numeric display tubes that counted by lighting
weak filament around the circumference of the tube as viewed from top.
there were 10 little filaments.
(probably developed by the guy who invented the electric meter)

judging from the model number, probably was display for racal receiver
(for example RA-6366 was spectrum display unit for RA-6217 receiver)/
rack mount units about 3.5 inches high.

would like to sell them so I can get wife a fur coat. how about $100 + ups
(she'll have to settle for rabbit --or rat)

I am looking for any 1940s vintage CRTs with Ken-Rad markings. They will most likely be types906/ 3AP1 or 5BP1 (and their P4 versions). If anyone knows of any others, I would like to hear about them. They don't have to work but should be in good physical condition with legible markings for photos.

Naval jelly is a very common hardware store item. It comes in a plastic bottle holding maybe a cup at most. It's probably available in larger quantities (you want a 55 gallon drum, maybe?? HI HI) too, but this is the most common small quantity that I've ever seen.

I'm looking for a 7868 pentode which is the modulator for a Lafayette 6m am rig.
I have found a local shop where they have some, but they want something
like $38 for one.

Can anyone spare one for a price that is not so steep, or suggest where
else I might find one?
The supplier I mentioned above also checked his vendors' catalogs, and
couldn't find an
equivalent in the import tubes.

Thanks and 73

Condition about 7. They are original. They work (I've used them regularly for the last few months). They do need cleaning-up. There is some corrosion on the chassis of the HW-16 that needs attention to make the rig really nice. They are not beaten-up, but they aren't pristine either. There are copies of the manuals. They've not been modified.

Price: $105 + shipping.

-Mark K0EX

PS - just bought a new HF rig, so need to get these a new home.

TWO (2) 2-METER 10-MEMORY SYNTHESIZED HANDHELDS FOR SALE

KENWOOD TR-2600 w/lots of accessories for *Very* extended handheld use.
These are quite rugged and capable radios, in great condition.
With the following accessories, one can operate for day after day before
needing to re-charge or buy batteries.

Package includes the following:

2 Kenwood TR-2600 2-m Handhelds
10 memories, scan, odd splits
Touch-tone keypad, direct frequency entry

2 Custom deluxe leather carrying cases w/metal belt clips

6 PB-26 nicad battery packs, varying ages

2 EB-3 6-C cell alkaline battery packs (equivalent to 5000 MAh each)

1 6-AA cell alkaline battery pack (looks like PB-26)

1 SMC-30 Speaker Mike

1 Quick-Charge Base Stand ST-2

2 Standard Kenwood wall chargers for PB-26

2 Rubber duck antennas

1 Original factory manual

The first $325 will take the entire package, and I'll pay for shipping.

Please note that the two handhelds are in perfect operating condition
except that one handheld transmits in simplex only.

In addition, the matching Kenwood Vox Headset HMC-1 is also available.

Feel free to contact me at bashin@calweb.com, or telephone at
916-441-4096.

Thanks,

Bryan Bashin

Hello all!

I just attended an excellent Hamfest and picked up a pair
of JAN-C6A tubes that I believe are hydrogen thyratrons.
Unfortunately, I am having a bear of a time finding the
specs on these tubes.

Since you guys are the experts, I thought I would ask here.

Does anybody have an old book that might have the data
on this tube? I believe it might be WW2 era.

Thanks for any help you can give me!

KENWOOD TS-520S 200-WATT HF TRANSCIEVER FOR SALE

This TS-520s is in excellent condition, with young finals and is operating now. The TS-520s was one of Kenwood's most rugged workhorses ever, and it operates on the 80 to 10 meter bands.

The 520s model also has the capability of running directly off 12 volts DC, as well as from its built-in AC supply.

Package includes:

--Kenwood TS-520s Transciever

--Original complete manual

--12-volt power cord.

--Desk Microphone

Asking $350 for the entire package.

May trade for repeater controller and/or good 440 duplexer.

Feel free to reply by e-mail to me at bashin@calweb.com, or telephone me at (916) 441-4096 after 8 am Pacific time.

Thank you!

Bryan Bashin

A company called "BTI" (brad thompson industries) made the LK-2000 (and LK-2000HD) in the mid 1960s. The tube is a 3-1000Z. Coverage is 80 thru 10 meters but no WARC bands. Expect 1000-1500 watts output. Drive with 75-150 watts. Keep the insides clean; the bandswitch is a bit hard to duplicate/replace if it fails due to carbonized insulation. You can separate the power supply section from the RF deck section (but be mindful of high voltage and proper grounding between the sections because the high voltage line is an old style MILLEN single-conductor plug).

I've never heard of the HK6 tube, but it might be another designator for 3-1000Z. If the 3-1000Z is dead, you can use a 4-1000A at reduced output with very minor mechanical attention.

>
>Hello to all,
>What tubes does the 500 use for finals?

The Swan 500C used a pair of 6LQ6 Sweep tubes for the PA section. They are still available from the regular tube suppliers but are getting a little expensive some say, however they should last for many years if equalized and tuned up quickly.

Have fun!

73 Gary VE4YH

PS Check out the SWAN net Sundays 4pm central on 14.251. We had 16 check ins last week.

Looking for mid fifties to early sixties portable record player like the kind I remember using when I was younger. RCA made these as well as other manufacturers. As I remember was a case about 18 inces wide by 24 inches deep by 10 inches high. Had cover on hinges that may have been removable. Case had textured vinyl like covering usually grey or tan color. Volume and tone controls on front of case near speaker. Automatic record changer with spindle for stacking 45 rpm records. I believe most were hi-fi with ac-dc tube amplifiers.

Anyone have one for sale I would like to discuss this item with you.

Thanks in advance.

Larry

If you're looking to remove rust try "Compound No. 729." Use it once and you'll throw rocks at Naval Jelly. Acive ingrediant is the same, but "729" is concentrated and dilutable with water. I've never bought the stuff, (borrowed 2 cups from a friend and diluted it 1:5) but suspect it costs about $30 per gallon(?).

The 0A2 isn't a ballast tube - it's a voltage regulator tube.
Cold cathode, gaseous filled.

The only possible solid state replacement would be made with
a high voltage zener diode. I've not seen any commercially made
versions.

Both the 0A2 and the 6U8 tubes are common and fairly easy
to get.

It's Phosphoric Acid.
Get it at the automobile paint wholesaler
or from chemical supply company.

It's in many popular soft drinks too.

Iron Oxide (rust) > Iron Phosphate (glassy looking stuff)

The above transmutation :-) is based on vague recollections of
Freshman Chemistry. Please verify prior to use!

(It's been 26 years)

I have a friend who has a Drake L4B amplifier that keeps blowing what he calls the "large" transformer, which I am guessing is the plate xfmr. He has had the power supply gone through and replaced the relay. The new xfmrs last about a month, and no tube damage has been done when they go. Anyone have any ideas as to where to look for the problem? Any help will be greatly appreciated. Thanks, John N0EE

Hi

You should all also know that this area code is an over sea's
international toll call. The number is someware down in the virgin
islands and any number thare could be the equivalent to a 976-XXXX
number hear, exept complaints to the local phone company will not get
the bill waved and thay are not required to tell you about the charges
during the call.

Thare have been other posts warning about scams that get people to
call the 809 area code, 644 is part of the old 809 area. Thay have to
split area codes sometime too. If you check out the web page:

http://www.bellcore.com/NANP/newarea.html

it lists all area codes and thare locations, location to area code,
and info about new area codes. Check befor you dial.

Hi Jack.

I've built a couple of 813 monoband amplifiers. Work great!
I used 866B's (mercury vapor) rectifiers for the B+. Nothing
as cool as watching those 866's ionize on voice peaks. I ran
about 2500V on the plate. The bias is controlled by a back
biased Zener. A 50 watter at...if I recall, 7.5 volts just
about zeroes the grid current. The filament is the cathode,
so you have to isolate them from your grounded grid. I used
1/4 " copper tubing to wind my plate coil, and for 14 MHZ
I used a 50 pf wide spaced air variable in the plate input,
and a 500 pf doorknob in parallel with a 500 pf air variable
for the load cap. Pi-L wasn't necessary. I'd like to find
those old rascals. I had a rack with an 813 monobander for
80, 40, 20, and 15 meters. The 15 meter unit never quite 'got
with the program' like the others did. I think Orr's Radio
Handbook has an 813 amp design in it.

I wouldn't waste the bucks on a 'switching ps'. You need an
old 'Frankenstein knife switch' to complete the image!

73 - Jim W9LZ

p.s. run some air around those 813's.

I am restoring a HQ170 and need a few knobs to make it original:

Bandswitch knob

2 each round knobs like avc and noise blanker

2 each pointer knobs like antenna trimmer

I think these knobs were used on many other Hammarlund receivers as well

Also the bezel around the windows is flaking badly. Anyone have one from a junker or know a good paint reference? I think this bezel was used on many models too.

Many thanks.

Your problem description is sparse. Trying to solve it from afar is like
giving a haircut by mail. It would help to know if the failure is an
open or shorted winding and which winding. Is there anything else
connected to the AC line that could produce voltage spikes? Many times a
problem is related to a change that was made. Think back and ask, did I
do anything between the time the rig worked okay and when it started
having a problem.

1425. CES Smart Patch Simplex Autopatch for Sale

Newsgroup: rec.radio.amateur.boatanchors

CES Smart Patch 510SA SIMPLEX AUTOPATCH FOR SALE

This autopatch will enable anyone to convert a radio transciever into a personal telephone autopatch. The Smart Patch connects to your radio's audio, microphone and squelch circuits and listens for you to turn it on remotely via broadcast DTMF (Touch-Tone) tones.

The Smart Patch runs off 12 VDC and is only about 9" x 9" x 1" high. It features powerful programmable options for setting the following:

-- sample window
-- sample rate
-- toll call restrict
-- enabling a personalized ID
-- pulse/tone dialing
-- activity timer
-- timeout length
-- personal access code settings

The simplex autopatch will also operate in reverse autopatch mode, sending an alarm tone over the air to alert you that someone is calling your telephone line.

Front panel LED displays show connect status, RX, TX and squelch conditions. Also, four front-panel switches allow direct connect, disconntect, power on/off, and toll-restrict enable/disable.

Also included is the original instruction manual.

This unit has served me flawlessly and is in good working condition. Like other CES products, it is beautifully and solidly built. It originally sold in the AES Catalog for $450.00.

Asking $175.

Will also consider trading for a *good* 440 MHz duplexer.

Please contact me either by e-mail at bashin@calweb.com, or telephone after 8 am Pacific Time to: (916) 441-4096.

Thank you!

: and tuned up quickly.

They certainly are getting expensive! I need just *one* for my Cygnet 270B that I bought from a friend at the local club. This rig looks like the day it left the factory, but needed a driver and a final.

Antique Radio Supply in Phoenix quoted me $39. I've seen others quote as low as $25, and as high as $100.

Guess it's just like collecting vintage autos - parts eventually become difficult to find, as well as expensive.

Looking for tubes:

0A2 and 6U8 (used checked ok)

Also interested in solid state replacements for th
0A2 tube. Does SURPLUS SALES of NEBRASKA sell these?
Ideas on a price?

thanks,
Joe

I have the following books for sale:

Radio Books

1. Radio Engineering by Frederick Emmons Terman
Third edition, printed in 1947 969 pages.
Excellent condition. notes on inside front page.
Price $15 Shipped

2. Engineering Electronics by Donald G. Fink
First Edition 1938 358 pages
Excellent condition.
Price $10 Shipped

3. Electrical Engineering Laboratory Experiments by Ricker
Fourth Edition 1940 458 pages
Excellent condition
Price $12 Shipped

4. Industrial Electronics by Gulliksen and Vedder
First Edition 1935 245 pages
Excellent condition
Price $10 Shipped

5. Electronic Engineering Handbook by Batcher and Moulic
First edition 1944 456 pages
Excellent condition
Price $12 Shipped

6. Advanced Electrical Measurements by Walter Michels
Second Edition 1943 347 pages
Excellent condition
Price $10 Shipped

7. Practical Radio Communication by Nilson and Hornung
Second Edition 1943 927 pages
Excellent condition
Price $20 Shipped

Will trade any of the above for ARRL Handbooks and or ARRL
Publications Pre-1970.

Also collect Old Amateur Radio Log books and anything of historical
interest to Amateur Radio.

Thanks

Hi Walter - I also have the SX-117/HT-44/PS150 station. I don't know a source for the paint but I can tell you that the cabinet surface has a texture to it - not exactly a crackle finish but not smooth like the Collins S-Line cabinets. Good luck. If you hear of a source for paint would you mind letting me know? My gear is also in great shape but there are a few flakes of paint off the cabinets.

Dear Joe,

Saw your request for a KWM-380. I have one. It has everything!
Kiron chip, keypad, noise blanker, speech processor, blower cooling kit,
SM-280 mic. All switching diodes have been changed to PIN HP type and the
6 kHz AM filter modiification. This includes ALL 18 factory service mods
and service letters. The radio is in #10 condition. Recently aligned by
Harry Snyder/W7HC, considered to be the national expert on 380 (he worked
for Collins on 380(s). Asking $4,500.00 firm.

Please send your material on now to the postal address above.

URL: http://www.rte.ie/
eMail: evans@internet-ireland.ie
TEL: INTL + 353 1 2083991 A 24 hour mailbox

TO WHOM IT CONCERNS

My name is Tim Lehane and I work with RTE national radio for Ireland. My particular programme MONDAY 7.02 has recently won a prestigious national award for quality broadcasting, and as a result we have revamped and our new programme is called ANOTHER TIME ANOTHER SPACE. Our programmes are rebroadcast on satellite and via cable to Europe, America and Australia. We are also rebroadcast over local radio stations in these continents, who take all or selected parts of our programming. We are also doing some broadcasts on the internet http://www.rte.ie/

Our programme has a particular audio driven aspect to it., we feature all kinds of strange and different things. To date we have looked at an extremely broad range of experimental music, speech, sounds, audio, from all over the world. Maybe you have unusual items of interest to us, or are a collector of the ususual, old radio recordings, early audio recordings, recordings of the countryside, or train stations, whatever is different, mainstream or not, we are interested.

Past contributors have received excellent reaction, and work out of having their material featured on our programme. We are interested in using anything, that remotely fits into that category, so do post it to the address below, in any form cassette, DAT, mini disc, CD, though no audio files through the internet please.

IMPT: Since initial posting, we have been getting e-Mails asking us what address to send it to, what format is acceptable, and "I do x type of work, would you be interested in me sending that to you" YES we will feature almost all things sent to us, so just send it on. The full ADRESS is given above and below. Finally except for internet audio files, ALL AUDIO FORMATS are acceptable.

So send it on, and we will contact you shortly, looking forward to hearing your material, best wishes.

Please send your material on now to this postal address above.

Yours Sincerely

TIM LEHANE

Fullerphone MK II, British WW2, These are telegraph terminals
They are in fair to good condition there are 2 ea. One set of
headphones. Price $50.00 for all.

Microphone Headphone combination the mike is marked
"Microphone Hand No. 7 " there is no name or Id on the
headphones. There are other marking that would make one
think that these came from WW2 they have the telltale orange
type of stamps on them on the mike RS-2 & sc5601p. the marks
on the headphones are under the hard ware and I cant read them.
The cord that hooks it all together is of a brownish color with red,
white and blue stripes woven in. The plug on the end is a 5
conductor three sided male plug. It really looks new but dusty.
Offers?

R.L. DRAKE TR-6 original Manual in good condition. Price
$25.00 I'll pay shipping.

Dow-Key #260B-2604 Relay these were made by Dow-Key
while it was part of Kilovac. They are for switching an
amplifiers in and out of line. They have 12 vdc coils and gold
plated contacts. I 'm using one on my DTR 2000 Dentron.
There like having 2 regular ones in one package. Price $50.00

Shipping extra

Most of them were hacked or gutted for the parts, notably the roller inductor. Some were converted to VFOs. Many were just scrapped.

In the 1950s and 1960s ther were selling for a buck, new in the box!

If you are into SCUBA diving I would expect you'd find lots of them at the bottom of the English Channel as well as BC-375s and BC-348s! They'd probably be slightly wet!

I am working on trying to complete a full "set" with all the bits and pieces. Once in a while I find another cable, control or switch box. The racks are probably the hardest pieces to find because most of them were scrapped for their metal value long ago.....

1463. Re: FS: Heathkit HW16 and HG10B

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-20 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.970220012425.16611A-100000@Ocean.CAM.ORG>
Source record: 122703

The HW16 is a CW transceiver. It was meant for Novice use, so it's three bands (80/40/15), tuneable receiver but crystal controlled xmtr, and it must have been 75 watts input to match the power limit of the time.

The HG10B is the VFO that goes with it. It was also used with a CW (and I guess it had AM too) crystal controlled transmitter in the DX-series, which all of a sudden I can't remember the number of. I'm thinking DX-160, but there was a Radio Shack receiver that had that number. Whatever the number, there was a low-end amateur band receiver that went with it; again, I suddenly can't remember the number.

All of this equipment ws tube-based.

I have one, and it's pretty nice. Your friend must have purchased
a foreign model, as mine says nothing about an HK6. These amps were
manufactured in the early to mid 1960's. I have to echo the other fellow
who replied, and tell you that it originally was supplied with a 3-1000Z.
The instruction manual that came with mine states that you can use a 4-
1000A in it, simply by removing four of the fins from the anode cooler.
It mentions nothing about output being higher or lower to the best of my
recollection. I advise you that if possible, use the 4-1000A because of
cost. A 3-1000Z runs about $625 from RF parts, while I have seen 4-1000A
tubes for $35 used in good condition. The company made two power supply
versions, one light duty, and one heavy duty. I offered my amp for sale
awhile back, and everyone only wanted the heavy duty power supply
version. Mine is the standard-duty supply. I purchased the BTI amp for
$500, then had to put another $400 and a 400 mile road trip out-of-state
to Knightdale, NC (Omega Amplifiers) to get it working.
My LK-2000 plus one spare tube is still for sale for $900 plus
shipping (MUCH prefer pickup!) if anyone is interested. It was in the
shop so long I bought another amp (Henry 2KD-5) in the meantime, and I'm
too lazy to switch back! I put the Henry amp into a rack mount, and the
BTI is a floor console model. The BTI is in excellent working condition,
and looks nice too. It'll sit here and rust before I'll take any less. E-
mail if interested to kr4wm@sccoast.net
Those who know this model know it's a good amp, and won't have any
questions. However, for the novice users here, I'll answer any questions
asked about this fine apparatus. 73, Web Williams, KR4WM

I concluded output power was lower based on the following operation: My power supply is based on a dahl transformer and a couple of extra output caps in the filter and runs about 3800V no-load. Two good 3-1000Z's each got out about 2200 watts (into a dummy load); tried four different (all good) 4-1000A's and got 1200-1300 watts out at best. I believe the delta is due to the gain on the 4-1000 being low because of zero screen voltage (the 4-1000A is intended for +600-800 on the screen and about -100 on the grid rather than as a zero bias triode).

Physically you should plan on insulating the top of the tube from the cage with some fishpaper or other insulator; there is NOT enough clearance otherwise, if you go the 4-1000A route.

>to Knightdale, NC (Omega Amplifiers) to get it working.

The bandswitch on my LK-2000 was so crudded up (the former owner was a heavy smoker) that I just disposed of the entire bandswitch and replaced it with a set of five tiny vacuum relays driven by a diode matrix. Highly non-standard, but it works fine and was a far cheaper solution for me.

> Those who know this model know it's a good amp, and won't have any

FOR SALE: Powerful 2.5 KW Classic Transmitter

I'm selling my Wilcox 96D, a 1950's-vintage professional exciter/transmitter/amplifier. It uses a pair of Eimac 450TL final tubes to produce well in excess of 2,500 watts OUTPUT anywhere between 2.0 and 26 MHz with its built-in CW/AM exciter. It may transmit over a wider frequency range if you use an external exciter.

The Wilcox Electric Company of Kansas City built these beauties to the highest specifications, using machining and heavy-cuty components unseen today. The transmitter has its own built-in antenna tuner, panel meters, and blower. This beast is about a foot wide, 27 inches deep, and six feet tall. The 96D was a workhorse of military and civilian broadcasting for decades. Some were used in banks of six for airport or shortwave broadcasting. This particular transmitter was used by the California Highway Patrol to broadcast police bulletins throughout the West.

For those who aren't familiar with it's construction, the entire transmitter can be exposed and serviced by sliding it out from the cabinet, much as a filing cabinet operates.

In addition to the transmitter, I'm including four NEW Eimac 450TL tubes. These are beauties, a foot tall clear glass triodes. Two of them are still in the original packing boxes. New Eimac 450TL tubes can sell for $700 each.

I also have the original hardbound operating manual, with maintenance instructions and all schematics.

You get to supply a modulator and power supply.

Asking $550 or possibly trade for some combination of 440 MHz controller/duplexer/repeater.

It's probably best if the unit is picked up directly from its current location in Sacramento, California.

For further information, please feel free to telephone me at (916) 441-4096 after 8 am Pacific time, And you can always e-mail me at bashin@calweb.com as well.

1475. Racal RA6790 Receiver ROM update

>so I will be looking to build one up (some thought to a switching
>supply-- any experience.) Overall if it appears to be a major $ sink
>project, I may abandon it and find a SB-220 or 200 to play with.

Check out Bill Orr's Radio Amateur's Handbook, which has a schematic
of a twin 813 grounded grid amp for 160 & 80 meters with a Pi-L output
network and input network coil-cap charts. Bill's book also has lots
of Pi and Pi-L charts and tables as well as general amp design info.
Unfortunately, the ARRL never published a simple, grounded grid 813
project in their handbook, prefering to instead publish exotic amp
projects with expensive or hard to find parts.
Since you don't have the power supply, you are missing the most
expensive and hard to find part for an 813 amp - the power transformer.
Unless you can find a 2500-3500 volt/0.5 amp transformer somewhere,
it would be far cheaper to buy a used SB-200 and fix it or use it
for parts. The SB-200 uses the much more expensive, but no more
powerful 572B tubes. Find one with flat tubes and convert it to
813's. I myself have a poor old Hallicrafters HT-31? amplifier that
someone converted to 813's because the tubes that Hallicrafters used
are as scarce as hen's teeth.

As for a switching power supply that provides 2500 Volts regulated at
400-500 ma., I guess I would start looking for a giant flyback
transformer and some silicon with a really high P.I.V.

1479. HELP: VERT ANTENNA AND LIGHTNING!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-20 00:00:00 UTC
From: wy491@freenet.Victoria.BC.CA
Message-ID: <E5wsLE.CKI@freenet.victoria.bc.ca>
Source record: 122719

Hello,

I am an SWL and not a ham (not yet!) and I am posting my question here in hopes of contacting someone out there more knowledgable than myself when it comes to vertical antennas and lightning protection.

MY QUESTION:

I am contemplating installing a homebrew vertical antenna that I read about in one of the ham radio pubs. It is made from approx 1" diameter copper pipe and is approx 16' tall. This portion of the antenna is connected to the center conductor of RG-58 coax while the shield of the coax will go to about 15 or 16 copper radial wires buried in the ground.

I live in a coastal location and get some pretty good lightning storms around here. It seems to me that 16' of UNGROUNDED copper pipe sticking up in the air is just an invitation for disaster! Obviously the pipe is not grounded because it is directly connected to the center of the coax. When I say disaster, I mean MORE than a burned-out radio. I'm talking structural and possibly fire damage to my house!

How do the rest of you handle this situation?

Thanks for taking the time to work with me on this.

Roger Peterson

Hi,

Well, I have 7 of the recivers (4 are duplicates), a rack and a remote control.
All work, 5 are original, the rest are pretty close.
I restored them in January.

I am missing a 0.5-1.5mHz and a 1.5-3.0mHz receiver.
And have duplicates of 190-500kC, 3-7mHz, and 7-9mHz.
Any one want to swap?

I have only 1 transmitter, and would like to have the rest, and the rack and modulator.

From: Clark Thompson <cmthomp1@facstaff.wisc.edu>
Message-ID: <330DF87F.890@facstaff.wisc.edu>
Source record: 122728

Hi,

I'm trying to fix a Tempo One for a Novice friend. It's working pretty well on bands that don't use the heterodyne ocillator. It works, but with very low sensitivity, on 15 and 10 meters (that do use the het. ocillator). On 40m it receives what I believe are 49m shortwave broadcasts. The het. ocillator crystal for 40m is marked 11.0 MHz, yet the board is marked 21.5 MHz. I've checked for the presence of a signal at both frequencies-- nothing. I can find the heterodyne signals for 15 and 10.

The W7FG manual that we have, shows the 40m crystal freq. as 11.0 MHz. However, the freq. of 21.5 MHz marked on the board makes sense as it is 14 MHz lower than the 35.5 MHz crystal freq. for 15m. Any body know which frequency is correct?

Also, anybody got International Crystals 800 number handy?

Thanks & 73,

Clark, KD9QI

Michael & co:

There are several places in North America where you can still buy tese.
One guy even has a CATALOG from up in Canada and sells 19 sets for $100
each! I have them listed on my web site at:

http://www.mnsinc.com/bry/

in the ham radio resources section.

mc@shore.net (Michael Crestohl) whistled a happy tune like:

Other than nostalgic value, the Collins 75A-4 doesn't hold a candle performance-wise to much made in the past 15 years. It crossmods, overloads, doesn't have a noiseblanker, etc, but then, that isn't in the spirit of this group. It's a beautiful piece of gear and was the companion receiver to the KWS-1 transmitter. Sky's the limit for one in excellent condition.

Look for a serial number >4000. There were some front panel changes made early in production (particularly how the front panel lettering lines up). Also try to find one with at least the 2.1 and 0.5 KHz (KC?) filters and 4:1 tuning knob. The knob will eliminate having to mess with dial drag (check out how this receiver achieves passband tuning and you'll see the need for dial drag!) There was a lot of 'mods' for this receiver, especially front-end changes to eliminate overload. Also, early models fed the IF tube plate thru the primary of the mechanical filters (series feed). There was a mod to parallel feed the IF plate, eliminating DC current thru the filters.

The PTO was subject to mechanical ills with the hill-and-dale correction mechanism due to the grease hardening. To test for this, tune a CW signal very slowly at multiple spots on the dial and listen for frequency burble with knob rotation. The PTOs are easy to work on if you're half-way mechanically inclined.

Maybe someout out there has the anthology for all the mods to this re-ceiver. There were a lot of them, published in QST and CQ.

For Sale

The following equipment is located in Sacramento, CA zip 95827.

1. ART-1 transmitter w/o 813 or 811's, complete otherwise, $125 plus UPS on approximately 75 lbs; $200 with boxed 813 and 811as.

2. R808 Receiver, Near perfect condition, $250 plus UPS on appoximately 80 lbs.

3. Eico 720 Transmitter with matching VFO, with docs $140 plus UPS on approximately 45 lbs.

4. Knight T-60 transmitter with Knight VFO with docs, $140 plus UPS on approximately 30 lbs.

5. Heat DX40, Upgraded internal Power supply (clean conversion) with Heath VF1 VFO, with docs $140 plus UPS on approximately 40 lbs.

6. Hallicrafters HT-37, nice shape, Good finals, $150 plus UPS on approximately 85 lbs.

7. National NCX3, AC/PS - speaker, Excellent condition with docs, $175 on approximately 40 lbs.

8. Heath HW-100 with HP-23, good finals, new rubber belts, condition well above average, with docs, $175 plus UPS on approximately 40 lbs.

9. Central Electronics 20A SSB Exciter, perfect front panel, with spare NIB 6AG7s, and CE package VFO, with docs, $130 plus UPS on approximately 45 lbs.

10. Central Electronics 20A SSB Exciter, perfect front panel, with spare NIB 6AG7s, and Lakeshore Bandhopper VFO, with docs, $160 plus UPS on approximately 45 lbs.

I am offering for sale the following radio technology books.

Please add $2 per book for 4th class book-rate postage, or add
$3.50 per book for First-Class postage.

* FUNDAMENTALS OF RADIO
by F.E. Terman
1938, 1st ed, McGraw-Hill
458 pgs
Excellent Condition
$22

* ELECTRONICS & RADIO ENGINEERING
by F.E. Terman & R.E. Helliwell
1955, 4th ed, McGraw-Hill
1078 pgs
Very good condition
$18

* RADIO ENGINEER'S HANDBOOK
by F.E. Terman
1943, 1st ed, McGraw-Hill
1019 pgs
Excellent condition
$22

* THE RADIOTRON DESIGNER'S HANDBOOK
by F. Langford-Smith
1941, 3rd ed, Wireless Press for Amalgamated Wireless
Vale Co. Pty, Ltd (Sydney)
352 pgs
Excellent Condition
$20

* THE RADIOTRON DESIGNER'S HANDBOOK
by F. Langford-Smith
1952, 4th ed, RCA Victor Div, Radio Corporation
of America, Harrison, N.J.
1482 pgs
Excellent condition
$50

* ELECTRON TUBES IN INDUSTRY
by Keith Henney and J.D. Fahnestock
1952, 3rd ed, McGraw-Hill

353 pgs
Very good condition
$16

* PRINCIPLES OF RADIO
by Keith Henney
1929, Chapman & Hall (London)☐
477 pgs
Very good condition
$18

* PRINCIPLES OF RADIO
by Keith Henney
1942, 4th ed, J. Wiley $ Sons
549 pgs
Excellent condition
$18

* RADIO ENGINEERING HANDBOOK
by Keith Henney
1950, 4th ed, McGraw-Hill
1197 pgs
Very good condition
$22

* PRINCIPLES OF ELECTRON TUBES
by Herbert J. Reich
1941, 1st ed, McGraw-Hill
398 pgs
Very good condtion
$25

* THERMIONIC VACUUM TUBES AND THEIR APPLICATION
by Sir E.V. Appleton
1932, Methuen & Co (London)
117 pgs
Good condition, cover loose but NOT detached
$22

* ELECTRONIC TUBES, TRANSMITTING TYPES (MANUAL # 7162-X)
by General Electric Co, Tube Dept, Schenectady, N.Y.
1954 (Loose-Leaf format)
Good condition. Some mold staining on 5 pages. Binder is
in excellent conditon.
$18

* RCA RECEIVING TUBE MANUAL (RC-18)
by Radio Corp of America, Tube Div, Harrison, N.J.
1956
352 pgs
Good condition. Evidence of hand grease on leading edge of
pages from "thumbing" through. Looks like somebody might have

actually used this one from day to day.
$12

* INSIDE THE VACUUM TUBE
by John F. Rider
1945, J.F. Rider, Inc
407 pgs
Very good condition
$20

Please e-mail if interested in any or all of these.

I have the following transformers and safety switch left over from some
recent projects:

A. Low Voltage High Current Transformer
New Jersey Transformer Co. Type HR Spec 9766
Nameplate Rating: Primary 230-250 Volts with 115 Volt Tap
Secondary 19V, 60 Amps
Primary Taps at 220, 230, 240, & 250 Volts with 115 Volt center tap.
Actual Secondary Taps measure about 15, 17, 19, 21, 24, 26, 28, & 31
Volts
Weight 70 Lbs Older transformer, but good functional condition
Asking $35

B. Low Voltage Rectifier Transformer
Acme Electric PS-47125
Nameplate: Input 100-130 V, 60 Hz
Output 24 V DC 15 Amps
Measured output 40 Volt AC Center Tapped with 118 volt input
Third winding which may have been used for saturable voltage control
Mounted on Chasis with two diode half wave bridge rectifier
Weight 27 Lbs Good used condition.
Asking $20

C. Heavy Duty Safety Switch
General Electric Catalog No TH3363
Rated 100 Amps, 600 Volts AC or 250 Volts DC
3 Pole, NEMA 1 Enclosed, Fused
Weight 19 Lbs Good used Condition
Asking $25

These items are located in Erie, Pa, 16509

1510. KnightKit "Ocean Hopper" Front Panel Replacements

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-22 00:00:00 UTC
From: 3W8PE1B <willi6@erols.com>
Message-ID: <330F2CEA.68F1@erols.com>
Source record: 122600
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.antiques.radio+phone,rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.amateur.equipment

For those of you out there who are in the midst of a nostalgia trip, restoring an old KnightKit "Ocean Hopper", I've found an excellent source of replacement front panels.

These panels are made of heavy gauge metal with all holes pre-drilled (correctly sized and placed). They were professionally painted and all markings silk-screened by a company that specializes in custom enamel work. The color match and finish is very close to that of a sample "Ocean Hopper".

These panels are available from Dave Ishmael, WA6VVL, noted "Ocean Hopper"
restoral guru, and author of "Vintage Anthology - Book I" and other articles
in various ham and antique radio publications. Dave had these produced to
support his own restoration projects, and was kind enough to have a few extra cranked out for the other "Ocean Hopper" affecianadoes. He only had
a limited number made and only a few of those are left.

Even if you do not have a current "Ocean Hopper" project in the works, it might be worth grabbing one+ while they are available. Both of the "Ocean Hoppers" I have found showed their age on the panels and it would have been difficult to restore back to "as new" on an individual basis.

The other possibility would be to use the front panel as the starting point
for any homebrew regen project - has holes for Main Tune, Bandspread, Antenna
Tuning and Regeneration.

Price is $20 for one, $35 for two, and $45 for three. Post Paid.

* * * UNSOLICITED TESTIMONIAL - Spelling ;-) * * *

I only know Dave by reputation in the "Ocean Hopper" community and from reading his articles. Having a fair idea of what it would cost to have one or two of these done with any quality, I ordered three from Dave. I was extremely impressed by the quality and authenticity of the panels and doubt that Allied Radio did any better back in the 50's. These will save me time and $$$$ on my two restorals! Dave K7HMP

1512. WTB: WESKIT Mdl BN-1 Transceiver (Western Radio)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-22 00:00:00 UTC
From: 3W8PE1B <willi6@erols.com>
Message-ID: <330F4C24.46BE@erols.com>
Source record: 122602
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.antiques.radio+phono,rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.amateur.equipment

Now that my KnightKit "Ocean Hopper" and Ameco AC-1 projects
are well underway, it's time for yet another DXpedition into
Nostalgialand.....

The BN-1 is one of a series of small, battery operated, tube radios
(transceivers and receivers) produced by Western Radio of Kearny, NE.
The BN-1 was aimed at the Novice (hence, the "N") and covered
80/40 Meters, was XTAL controlled, and was battery powered
(hence, the "B"). It was available as a BN-1K (kitform) and also
the BN-1A (improved circuitry). The normal small cabinet was
fiberboard material, although a metal case was available for $3.50!!!

The tube was a dual triode (3A5) that served as the XMTR and RCVR.

you started QRP with a single 45 Volt battery
and could work up to QRO with a couple of 90 Volt batteries.

They normally adversized with small (one colum inch) ads in the
back of Electronics Illustrated and Popular Electronics.
The Western Radio (WESKIT) line also included:

Allband Transceiver (BAB-1)
Six Meter Xcvr (BA6-1)
Two Meter Xcvr (BA2-1)
Citizens Band (C27B)
All Band Receiver (BR-1)

If all this nostalgia peaks your interest, Sheldon Wheaton,
KC 0 CW, has a BN-1 illustrated on his web site at:

http://www.sky.net/~swheaton/bn1.html

[[Thanks, Sheldon!]] :-)

I had one of these as a kit (isn't that always the story); but,
traded it to a local radio shop for a batch of SWL books,
(Actually a good deal at the time - before nostalgia set in!)

If you have one of this cute little rigs you'd like to part
with, drop me an E-Mail at: willi6@erols.com

Hi all
I've got some BA's going to this fest in Absecon, NJ on March 1st. Will probably take HT-37 / SX-111 / R-48 / HA-1 station, NC-300, HT-40, T-150, EFJ Challenger, EFJ Phome patch, HP-23A , DX-100, and assorted parts. Possibly have my other Heath station there also RX-1 / TX-1 / SB-10 / HM-11 / HO-10

Price police take notice ! I need room, not money, so won't be offering anything at bargain prices !

There is a very good book on Halli's by Chuck Dachis. It has info on
everything manufactured.

S-108

Eight tube four band covering 540kHz to 34mHz.

Manufactured 1959-1961 retail cost 129.95

Current "book" is $55-80.

There are a couple of places on the net to pick up manuals (copies). W7FG
sells vintage manuals.

1527. R-390A Woes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-23 00:00:00 UTC
From: davidb@scn.org
Message-ID: <E61Cpt.20s@scn.org>
Source record: 122617

After convincing myself that my R-390A is not likely to emit smoke by conducting the recommended B+ short tests and re-forming the two big electrolytics on the AF subchassis, I connect a 600-ohm speaker to the output, plug it in, and turn it on. After some initial troubleshooting, I'm stumped.

Symptoms are: set does nothing except make white noise come out the speaker, even when tuned to the frequency of a local MW broadcast station (yes, an antenna is connected). If I feed an AF tone into the diode load terminal on the back, I hear the tone in the speaker. I've pulled the IF subchassis (again). If I feed a modulated 455 kHz signal into the grids of V504, V503, or V502, I hear the modulating tone in the speaker. As expected, the tone gets stronger as I progress; by the time I get to V502, the tone is loud and clear with the test probe an inch away from the grid lead.

But V501 is totally different: when I feed a signal into its grid, nothing happens until the probe is touching the lead, then the white noise disappears and is replaced by silence. No tone at all. The voltages at V501 all look normal, so it's unlikely to be a resistor or coil that's at fault. If I start feeding signal into the set at points between V501 and V502, the same results happen until I get past the mechanical filters, then I hear the tone loud and clear again. This almost makes it look like a bad filter, except that it happens no matter which bandwidth I use, and I find it hard to believe that they'd *all* be bad. Also, I've tested all the transducer coils on the filters and they all show the expected DC resistance of 40 ohms.

The manual says to test the components in the circuit of V501. All the coils and resistors check out OK, and I've tested the mica and ceramic capacitors by bridging new ones across them. I haven't tried replacing C504 or C505 (both of which look like paper capacitors) yet, but voltage measurements on them don't indicate excessive leakage.

The bandwidth switches look OK on visual inspection, though some areas are a little hard to see, so I suppose I could be missing something. I've sprayed them all with Deoxit twice, and tested most contacts by pushing on them gently. I've also tried replacing V501. Anyone have any other ideas?

Howdy all!

I am looking for information on what appears to be a Japanese SW/MW rx that I bought at a local thrift store. It is 20 inches wide and the case is a blue/green plastic, table model radio.

I notice the patent info and schematic on the bottom are both in Japanese and what I _think_ is the National logo also in Japanese. All it says on the front is " National 2 Speaker" "Wide Sonic Super" on the bottom it says DX-365 on the schematic. It covers 540-1650 and 3.8 to 12. The case is cracked several places, but it is all tube and _works GREAT_!

If anyone has any info on this unit, I'd be tickled! I'd like to find out the year, model (for certain!) and anything else :-)

1540. Help ID AM/SW/Phone from youth

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-23 00:00:00 UTC
From: provero@connix.com
Message-ID: <5eq27d$2gs@beast.connix.com>
Source record: 122630
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Looking for help identifying an old radio from my youth.
The description is as I remember it (my wife has nominated
me for Alzheimer's poster child several years running...)

Description:

Combination radio/phono console (Philco????)

Radio has AM plus 2 or 3 shortwave bands, up to 12
or 18 MHz. The dial markings make up 3 sides of
a rectangle, dial pointer rotates through 180 degrees
(from 9 to 3 o'clock). There is one of those wonderful
"magic eye" tuning indicators plus MANY pushbuttons
for AM tuning. The pushbuttons are NOT connected to
the main tuning, but are connected to individual
trimmers to set the frequency. The pushbuttons
were labelled with station call letters -- decals,
a few of which I may have inadvertantly flaked off.

I vaguely remember my dad bringing this home when I was four
or five in the mid 50's. The radio was "old" even then.
I vividly remember sitting on the floor in front of this monster,
at tuning eye level, cruising the old clear channel AM stations
and crowded SW bands. This radio was singularly responsible for
my current addictions/afflictions/hobbies of shortwave listening
and boatanchors.

Any hints? Thanks in advance,

1543. Radio rating scale? Mind over matter?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-23 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19970223212801.QAA14219@ladder02.news.aol.com>
Source record: 122633

I have a question! Are there written guidelines for determining the condition of boatanchor gear on this newsgroup? Most folks tend to use ratings like "it's a 7 or 8" when describing a set's condition. Judging from the condition of some sets I recently purchased through on-line services, I suspect there must be a direct correlation between the boatanchor 1-10 scale, and the Richter scale used for earthquakes.

For example I just bought a SX-28 receiver (my dream receiver, something I have been looking for several years!) from a gentleman in California (where else?). He described the radio as being between a 6 or 7.

When I received the radio, it looked like it survived a few level 7 earthquakes. The frontpanel is rusted, the S-meter scale is cracked in half, the dial scale is extremely darkened over a major portion, the dial cords and pulleys are broken, the S-meter housing has disintergrated,
the main tuning knob is broken off (taking the shaft with it!) and the chassis
has rust, the gear box assembly has corrosion... The speaker jacks are smashed, etc...

Of course, it doesn't work -- but that was never represented or discussed. For the price paid, $225 bucks including shipping, I think I got hosed.

So, can anyone answer my query about boatanchor ratings?

1549. Racal RA153E - help required - please!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-23 00:00:00 UTC
From: saponet@igubu.saix.net
Message-ID: <5eusp4$6cb@news1.saix.net>
Source record: 122639

I have posted some requests for help before but have still had no luck locating ANY info on this receiver. It is a dual channel direction finding set, as used by the navy or army. Circuitry seems similar to the RA17 (1st IF:37.5Mhz, 2nd IF 100kHz etc..) but I have absolutely nothing to go on - no cct diag/block diag etc..All sections inside the radio are isolated from one another by being enclosed in aluminium boxes and joined by coax cabling using BNC connectors (a la RA17). There are various BNC sockets on the rear of the rig to test the vfo's, IF's etc, which is where I got the value of the frequencies (above) from.

Receiver needs an external PSU which I have built up using spare parts and some guesswork as to what the HT voltage should be - at present set to about 275VDC. Using this voltage, the radio works and I can hear a few stations but sensitivity is very low - is this due to poor alignment/leaky caps/faulty components/low voltage? - I don't know!!

If anyone has any information or can direct me to a reliable contact, please let me know. I have tried the SA Navy and even Racal themselves but have had no joy. The vintage radio manual suppliers don't feature this rig in their lists.

Thanking you
Vince Stevens

Racal RA-17C12 Up Conversion Receiver. Very good condion, with manual and some spare tubes, (as well as homebrew outboard synchronous detector if you want it). Bandwidths 13/6.5/3/1.2/0.3/0.1. An excellent SWBC listening receiver, very stable with great audio. I have had this receiver since around 1980 when I purchased it from the Canadian Government. Previously, it had been used by the Department of Transport at their Wetaskiwin monitoring station. Reason for selling - buying a new receiver.

Asking Price $US400.

The Swan 500-C uses a pair of 6LQ6 or 6JE6C. They can be a pain to equalize, so a matched pair works best. 73 de N5MCJ (Jerry)

1552. Re: Radio rating scale? Mind over matter?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-24 00:00:00 UTC
From: Phil Nelson <philn@accessone.com>
Message-ID: <01bc221a$541b4a60$5445facc@philn3>
Source record: 122546

I doubt there are any written guidelines, and trying to establish
a rating scheme that everybody (including newbies)
understands and agrees with is quixotic. The world will
never agree on what terms like "Mint," "10," etc., mean.
I've seen disagreements about what is meant by a term
such as "new in box."

If you buy something sight-unseen, you're taking a risk.
I have been dismayed with some sight-unseen purchases,
and delighted with some others. The best sight-unseen
deals I've made are the ones where I had the opportunity to
get very detailed information about the goods beforehand.
If you buy something without asking, or under circumstances
where you can't ask for some reason, then you're at the
mercy of the seller.

Trading over the bitstream is no different than trading at a flea
market, swap meet, or wherever. You'll meet all kinds of
people and goods, some nicer than others. Caveat emptor.

Are you reading this? Great! That means it wasn't written it for nothing. Not to worry, you won't be wasting your time.

Amateur Radio is a hobby and like all hobbies, it needs to be fun and rewarding. We at FBOM Magazine may not be able to straighten out your 40
meter beam after a hurricane or stop commercial satellites from squatting
on your VHF repeater input, but what we can do is present a lighter side
to all the QRM.

FBOM Magazine is the new generation of radio hobby publications, focusing
mostly on amateur radio operators (Hams). FBOM Magazine is for everyone,
from the guilt-ridden Extra class ham to a Technician or CBer that's tired
of being blamed for the erosion of family values in America. FBOM Magazine, the official publication of the Bad Signal Club--A free-thinking
state of mind where you are certified to transmit scratchy signals, crack a
joke without saying "hihi," tune up on some Little LEOS and have a good
time laughing at others as well as yourself.

As if that wasn't enough, FBOM also pokes it's nose into the world of the
scanner junkie and the strongest competition to wireless communications,
the Internet.

*
* GET YOUR FREE SAMPLE ISSUE!!!
*
* Email N9VJG@aol.com now for your free sample of the latest issue!
*
* Visit our Web Site which is still under construction and
* in bad need of updating. Just nudge your favorite browser to:
* http://www.interaccess.com/uncle-del/FBOM/.
* If you have America Online, visit the FBOM Magazine folder
* in the Ham Radio Forum message boards, under "Manufacturers,
* Dealers & Vendors."
*

Why YOU should subscribe to FBOM Magazine:

1. You will earn your official Bad Signal Club membership and will be
able to operate any bands with a scratchy signal and tell the
complainers
to stick it where the sun doesn't shine.
2. Blatantly hilarious and unusual commentaries on life as a radio
hobbyist.
3. No boring propagation charts. We replaced those with "Radio
Horoscopes".
4. No articles for home-brewing outrageous tri-banders and RF amps.
Just
step-by-step guides on how to build contraptions like a
"rubber-duckie
plane" for your HT and how to clean nasty things out of your
microphone.
5. Wacky contests where you can win antennas, free chunks of used
RG-58
and other prizes.
6. Free classifieds for paid subscribers.
7. We don't make you feel inferior if you work channel 19.
8. Hey.. we're writing it, so why aren't you reading it?
9. FBOM is 100% biodegradable and fat-free!
10. No test is required for this upgrade.

Why YOU should subscribe to FBOM Magazine NOW:

Rates are CHEAP! 2-year (4 issues) subscription rate of $9. 1-year
subscription rate (2 issues) for $5.

For only $9 you can have 4 issues of FBOM Magazine delivered to you.
Hey
that's a pretty good deal--especially for a publisher that is terribly
desperate to gain more subscribers!

How you can give us your hard-earned money:

*
* Mail a check or money order for a 1 or 2 year subscription to
* "Eric Bond" (That's me, the publisher and janitor) and send it
* to FBOM Magazine, P.O. Box 7711, Westchester, IL 60154-7711.
*

It was probably made made Matshushita Electric of Japan (Panasonic,
Technics, Quasar, etc).

They sold many products under the name National or National Panasonic
outside of the United States.

Due to the existance of the National Radio Co of Malden, Mass (makers
of the ham radio equipment and components), Matshushita was prohibited
from using the National name in the U.S.

Your radio is probably 1960's vintage.

From: hoff@america.com
Message-ID: <5es3eh$776$1@defiant.america.com>
Source record: 122552

Maybe some of you 30L-1 experts can help with some questions.

I'm trying to restore a 30L-1 for my station, but the manual gives no procedure for setting R16 the ALC pot or C18 the capacitor that sets RF feed back. Does someone have a procedure for doing this that they can share with me?

At the junction of R12 and R28 on the relay coil there is a diode to ground. It's not in my schematic. Can someone tell me if it belongs there.

The relay in my amp is a Potter & Brumfield KA11DG. Based on the picture in the manual I just got, it does not look like the original. Has anyone had any experience with this relay? Or should I try to find one like the original?

Resistor R28 in the Ant Relay line is 34 ohms. My schematic says 56 ohms. Did Collins use different values for this part and if so how should one determine what the correct value should be?

Someone told me R12 the resistor across the relay should be 3000 ohms. Mine is 2000 ohms and thats whats on the schematic. Did Collins use different values? Or is the schematic correct?

All help will be greatly appreciated.

Dave,

Sounds like time for Mr. Oscilloscope. Start at the white
noise and work yourself back til so find the missing signal.
You might save yourself som time by checking the detector
output as a 'halfway' point.

1572. nixie tubes: TUNG-SOL DIGIVAC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-24 00:00:00 UTC
From: Greg Walcott <gwalcott@pacbell.net>
Message-ID: <331258F0.64A@pacbell.net>
Source record: 122566
Cross-posted to: rec.radio.ameteur,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I got a couple of display tubes at a swap meet and I want to make a project with them but I haven't found any information yet. I am not sure these actually qualify as nixies. As I understand it nixies have an element for each of the ten decimal digits and the elements are
stacked vertically one in front of the other. Also I think nixie may imply they are neon.

What I have is a segmented display like an LED/LCD. There are seven elements forming the digit
'8' which seem to have a white phosphorescent coating; each one of these goes to a pin. Two other pins are connected to pair of thin wires (filamentary cathodes?, cold cathodes?) strung
vertically in front of the display segments and wired in paralell (one pin goes to the top of
both wires and one pin goes to the bottom). They are packaged in a miniature 9-pin tube. There is a version with a decimal point that has a tenth pin placed directly between pins 1 and
9 in a straight line, not following the circle made by the other pins. I hope I can find a socket for this one.

So anyway I am not sure if these are called nixie or not. I would like to find out more about
them especially what voltage to run across the filaments and to the plates. Also if any are available surplus anywhere I would love to have a few more. The ones I have are made by TUNG-SOL and labeled "DIGIVAC". Most of the markings have rubbed off so I can't read a part #.

Hi Mates,

Tnx for the response to my tube posts. I wish I'd had a few more EL37s
to sell, I could have retired. The following tubes have been sold:

All EL37s
All GZ32s and GZ33s
All 6BM8s
All 6X4s
All 6SN7s
All 6DQ6B
All 6L6WGB
All 6SL7s
All 6360s
All 5Y3s

Still available: 21 RCA 6DQ5s at $8.00 each
21 Philco 6DQ5s at $7.00 each
1 Mullard EL38 at $15.00
1 RCA 7360 at $25.00
7 Amperex 6AS7GA at $10.00 each
2 Ratheon 6KD6 at $25.00 each
1 RCA 6KD6 at $25
10 Amperex 6JM6 at $2.50 each
3 Ratheon 6LB6 at $15 each
3 Philco 6JM6 at $2.00 each
4 Sylvaina 6BQ5 JAN 1965-66 at $8.00 each
2 Ratheon 6HS5 at $5.00 each
1 Philco 6KN6 at $4.00
1 Philco 6JN6 at $2.00
2 Sylvainia USA at $20.00 each
5 JAN/Amperex 6939 at $15 each

All these tubes are NOS in original boxes

Thanks

Bob, KE6F

++
The S-108 was first marketed in 1959 and was still marketed in 1963,
possibly later. They originally sold for $139.95.

They were single conversion (455kHz IF) so images were a real problem
above about 15 mHz. Pretty much run of the mill circuitry design.

Parts availability? Good luck if it's not an off the shelf item. There
are several places where you can get copies of the manual..... I just
don't know the names of the places.

Gary WB8SPV

This is one of those eternal questions that gets hashed over again and again (and I need to add it to the FAQ, perhaps the FAQNGA (Frequently Asked Questions with No Good Answer).

But there is a nice set of grading standards put together by the Collins Collectors Association. Problem is, of course, the guy selling you that 8 or 9 on a scale of 10 rust bucket probably hasn't read them or doesn't care what they say. but anywau, it can't hurt to have more people aware that there is indeed a standard way of grading old used radio gear. Help spread the word.

Here it is:
http://www.teleteam.com/%7ejmiller/cca_html/grading.html

>I have a R-388 that severly distorts audio output when RF gain is turned
>up rather high, e.g., 7-10. has anyone had this problem, if so what was
>wrong and how fixed? TNX, Jim

1.I have an R-388 and that is exactly what happens if the
AVC switch is set to OFF. Check it. Check also that a wire
to this switch isn't broken.

2.Next with the AVC switch OFF, observe the S-meter as the
RF gain control is rotated. At 10 the S-meter should read
0dB with no input signal. Rotate the RF gain control
counterclockwise. The S-meter should begin to deflect and
continue to move up until full meter deflection occurs near
the midpoint of the range (5). If this does not happen, you
probably have a bad resistor in the voltage divider chain
which develops the bias voltages.

3.If steps 1 and 2 pass, it sounds like a failure in the
tubes or circuitry associated with the AVC detector or
amplifier. Check V110 and V111 on a tube tester. These are
dual triodes so be sure to test both halves. If the tubes

are OK, check voltages and component values per Figure 25 of
TM11-854/TO-35R-388-5.

If all the above are OK I would look for a bad tube in the
IF amplifier string.

counterclockwise. The S-meter should begin to deflect and
continue to move up until full meter deflection occurs near
the midpoint of the range (5). If this does not happen, you
probably have a bad resistor in the voltage divider chain
which develops the bias voltages.

3.If steps 1 and 2 pass, it sounds like a failure in the
tubes or circuitry associated with the AVC detector or
amplifier. Check V110 and V111 on a tube tester. These are
dual triodes so be sure to test both halves. If the tubes

are OK, check voltages and component values per Figure 25 of
TM11-854/TO-35R-388-5.

If all the above are OK I would look for a bad tube in the
IF amplifier string.

1580. Help wanted! Repainting Heath SB-Line

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-24 00:00:00 UTC
From: hbreuer <hbreuer@metronet.de>
Message-ID: <3311A1C7.6E95@metronet.de>
Source record: 122574

Hello,

I need an info about repainting Heath SB-Line cabinets. I bought several units in the last weeks to build up a vintage station and some are badly scratched. It seems that the paint on the Heath aluminium cabinets is not so good as the paint on the Collins S-Line equipment (This must be one reason why Heath was much cheaper).

I know about the problem to treat the aluminium before painting.
Otherwise you can easily scratch it off even with a finger.
Has anybody a "homebrew" solution how to paint aluminium?
Which color should I use?

I noticed that the color on the Heath SB-Line is not the same on all units. I have the SB-300 and SB-400 which have the "light olive" cabinets and "dark green" front panels. I also have newer equipment which has the olive green with a "light blue tone" on the cabinet and also the dark green panel has a blue touch.

I would appreciate if any Heath collector here in this newsgroup would share his experience.

1581. Need small 30-50 ohm pot

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-24 00:00:00 UTC
From: w1ksz@juno.com
Message-ID: <5eqmot$hdu@news-central.tiac.net>
Source record: 122640

Trying to restore a Gonset G-66B Receiver to some semblance of its fine past. Amongst the problems I find is that the S-Meter Zero pot is shot (no pun intended). What I am looking for is a small (1/2 - 3/4 inch diameter) pot, 30 ohm value. I could use a 50 ohm unit and pad it down. Can anyone help ?? Tnx es 73 de Dick, W1KSZ.

Okay, folks, enough is enough. PLEASE, let's end all of this petty arguing, griping, insulting, and personal attacks on each other. As I recall, these newsgroups are for discussing EQUIPMENT, and not for discussing our opinions of each other and so forth.

I know that we all have the right, and ability, to just ignore the arguments, etc, and read the worthwhile posts, but it's annoying to have to wade through the muck to find the relevent posts.

PLEASE... if you have a problem with someone, and you feel some kind of need to insult them or argue with them, do it via private e-mail. Don't clog up the newsgroups. Let the rest of us enjoy them!

Thanks! (and if you feel you must flame me, do it privately!)

1590. FS: TCS Transmitter and Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-25 00:00:00 UTC
From: jrininger@aol.com
Message-ID: <19970225233400.SAA08164@ladder02.news.aol.com>
Source record: 122499

I have for sale a pair of TCS radios, one transmitter
and one receiver.

The receiver is a TCS-15; the plaque is missing from
the transmitter but I believe that is is a TCS-12. Both
are complete and appear unmodified, but I have not
tested them for electrical operation. Front panels are
faded but not gouged or otherwise defaced.

Best offer over $150 plus shipping/packing from
ZIP 93430; my guess is that they will ship at about
40 pounds each. I will take bids until 2/21/97.

Please email offers/questions.

73,
Jeff

>crypto device ? Harold Meltzer

I found some 1/4' paper tape that works fine with my unit. I would
check out places that sell reel-to-reel recording tape and see if they
have any paper leader tape. That would work also.

The original paper tape must be as scarce as the M-209 itself.

There is a place that advertises the canvas M-209 bags and the Tech Manual
as well. Don't know if its an original or a reproduction.

Fellow radio debris addicts-

I'm sure the shrinks have a name and a billing number,
but we know better don't we!

I'll be visiting St Petersburg Fla next week (Sun - Sat)
as crew for the Thistle Regatta (Spectators Welcome!).

I'd like to visit some surplus and radio stores while
there and will appreciate any leads. (Even to guys who
sell casually out of their garages).

Interested in any radio or radio parts related from early
1970's back to the dawn of radio time :-)

Can bring some swap stuff.

Thanks to all those who responded! I haven't fixed it yet, but it looks like a failing RF gain pot is at fault. It's supposed to be 5K, but with the wiper set at 0 mine measures around 12K. Looks like a flaky connection in there could be creating all sorts of noise.

Also plan on replacing C553 just on general principles.

I don't have the 390A schematics here, but here are some possibilities:

(1) Tune your signal generator around 455KC. If you are not hitting
455KC closely, you wont hear anything much. You've probably tried
this though.

(2) Check the wiring for correctness! Many surplus 390A modules
seem to be from the "unable to repair" shop. One IF module I
scratched my head about for hours had a 0.01?uf bypass capacitor very
nicely soldered in from chassis ground to plate of an IF tube.
It was supposed to go to the adjacent lug to correctly bypass the
other end of the plate load. Someone had miswired it, probably at the
repair shop. Maybe this same guy worked on yours?

BTW be really gentle with the IF module. Many old mechanical filters
have disintegrated internal foam mounts, so the guts of the filter are
hanging by four strands of #34 wire. It seems the factory used
"Pliobond" adhesive on the foam, which over the years has dissolved
the foam mounting rings.

Hw-101 80-10 m ssb transceiver for sale. Fair physical condition but works.
To be honest I think this rig works fine it receives well and puts out about 100 watts, but i have had some problems in the past with the mode switch and it needs a 15 m xtal, so it goes as is. Includes Hp-23 high voltage power supply.
Front panel is good but there is a 1X2" hole cut in the top of the case.
$100 plus shipping on 40 lbs from 44286 73 George KE8YX

>read a part #.

These are vacuum fluorescent displays. The filament is the directly heated cathode. The plates, coated with phosphor, glowed when they are at a positive voltage. This type doesn't have a control grid that other versions have. That type of display is still used, although usually customized and multiplexed, for example, your VCR clock or Stereo's VU meters.

Looking at some old Fairchild and TI ap. notes, they used a 25 to 30 volt plate supply with a 10 kohm resistor. You grounded the plate to turn it off. Another example uses 60 volts where the display driver runs 8 displays, time multiplexed. These are general notes, so I'm not sure of the filament supply, but one schematic uses 1.6 volts.

I want to acquire a RAK-7 and my XYL has informed me that I must rid myself of at least one radio before acquiring another. Therefore I am offering an SX-111 for sale. I bought it about 5 months ago from the fellow that restored it. He cleaned it, repainted the case and re-aligned it. It works wonderfully. There are two faults: some of the aluminum trim and knob skirts/centers are pitted and the is minor damage to the lettering on the glass scale. A copy of the manual is included. I would like $135 plus shipping.

Tom,

Replace them with plumber's O-rings. You can get them at hardware stores
for about $2.00 to $3.00 each. You need 2" diameter O-rings, 1/8" thick.
They are a standard size, and the modern Neoprene is MUCH better than the
old rubber that Heath used.

From: mc@shore.net
Message-ID: <5f17tt$12c@northshore.shore.net>
Source record: 122516

Hello Everyone:

A couple of days ago Bob Nickel W9RAN volunteered to edit a list of good source and reference books applicable to boatanchor theory, operation, maintenance, serviding and repair. This is an excellent idea and prompted me to go through my bookshelves and contribute a few listings. Bu nature of the subject these books are quite old, circa 1940s to 1960s but many should be available if one looks. I found many of these a long time ago at flea markets and used book stores but have seem some of these titles at hamfests and vintage/antique radio shows, although some have become pretty pricey. A couple of the more popular ones have been reprinted and where this is the case I have noted it. As noted in an earlier post, there is even a CD-ROM version of The Radiotron Designer's Handbook, a 1952 reference that is prized and valued by vacuum tube radio and audio enthusiasts alike

This list is of some of my favorite titles and focuses on boatanchor technology. A few are military TM11 tech manuals that were used for training radio operators and service personnel. These do not focus on any one piece of equipment but concentrate in a particular area. I'm sure many of you have other titles in your libraries that you feel will fit on with this list that will be uploaded to the Boatanchor archives and I urge you to write up a short description, post it to the List and cc: Bob Nickel who will compile and maintain this list. Bob's e-mail address is: ranickel@mwci.net

73 and enjoy!

Michael Crestohl, W1RC
w1rc@amsat.org

1. RCA Receiving Tube Manuals. I have several editions in my library because older tubes were deleted and newer ones added between editions. I won't list all the tube manuals in my library but they are spaced out over three-four year intervals. The latest one I have is RC-25 which is dated 1966 and has 607 pages. Availability: Hamfests & shows $5.00 to $15.00

2. RCA Transmitting Tube Manual - 1962, 320 pages includes the lineup of transmitting tubes including the venerable 807, 6146, 811A, etc. Availability: scarcer than the Receiving Tube manuals but I've seen them around - $5 - 15.00

I believe both these manuals have been reprinted and are sold by AES in Tempe AZ.

While on the subject of tubes....

3. Tube Lore, Ludwell Sibley 1996 ISBN: 0-9654683-0-5 $19.95 available from author (Flemington NJ 08822). 186 pages. Excellent reference source on the subject written for collectors and vintage radio buffs. Features cross-reference on tube types and general essays on tubes.

4. Elements of Radio, (William) Marcus & (Abraham) Marcus. 3rd Ed. 1953 771 pages. Prentice-Hall Library of Congress Catalog No. 53-8544 A classic text that focuses on radio receiving theory. Very well written and presented. Good first text on BA technology. Availability: Should be easy to find at any vintage/antique radio show - $5 - $20.00

5. Radio Servicing - Theory and Practise, (Abraham) Marcus, 1954, 794 pages, Prentice-Hall. Library of Congress catalog number 53-9729. A good second text that follows on Elements of Radio. Quite thorough in its coverage. Availability: same as Elements of Radio.

6. Elements of Radio Servicing 2nd Ed. (William) Marcus and Levy, 1964, 566 pages. McGraw-Hill Library of Congress catalog number 54-9698. Its very interesting that the "other" Marcus collaborated with another author to write a similar book. As with Radio Servicing - Theory and Practise it is focused on radio receivers with emphasis on broadcast radio repair and troubleshooting. Availability: same as Elements of Radio.

Here are four US Army TMs that I think are really good for learning about Boatanchor technology: I found these to be of particular help when learning about this stuff back in the 1960s.

TM11-4000 - Troubleshooting and Repair of Radio Equipment. April 1958, 177 pages. R-390 enthusiasts will especially want to get this book if they can as it uses that receiver as the "sample", although not actually identified as such. As it was written for soldiers it is clearly presented and covers receivers and transmitters. One of my favorite texts.

TM11-662 - Basic Theory and Application of Electron Tubes. February 1952. 215 pages.

TM11-664 - Theory and Use of Electronic Test Equipment. February 1952. 158 pages. Covers meters, tube testers, signal generators, etc. One of the neat things I like about this book is it details the venerable mil surplus test gear like the URM-25D, TV-7(*) and other equipment of the era. Very important book for any BA fan.

TM11-665 - CW and AM Transmitters and Receivers, Spetember 1952, 274 pages. Another essential book to have. Title is self-explanatory. Another personal favorite.

On availability: These may be found for a few dollars at flea markets and vintage shows if you're very lucky. They are otherwise hard to find. I don't know if they are available through NTIS. I've seen them go for $15.00 to $20.00 a copy. They're well worth it.

There are other military TMs that teach DC, AC theory, antenna/propagation, power supplies, etc in this series but I have omitted them because they are really generic and not Boatanchor-specific. However, if the editor feels they should be included I will be glad to provide a description of them. The Navy also has an excellent set of manuals that accomplish the same purpose and are quite excellent as are all Navy technical manuals.

Finally, there's Fundamentals of Single Sideband published in 1959 by Collins Radio Company. This book is quite technical and detailed on the subject written by the engineers who designed and developed SSB. There is not a picture of any of their amateur line in the book although the theory certainly applies to any filter-generated SSB transmitter. Its about 200 pages with lots of charts and diagrams. Availability is very scarce and I've seen them priced from $50.00 and up. I believe there was a reprint in the 1970s and these may be found at a much lower price. The original is a large paperbound book with bright yellow covers.

The titles above only represent a portion of my radio library and I have selected them as my favorite books of interest to Boatanchor enthusiasts. I have several other titles from the 1940s and earlier but did not list these as I do not feel they meet the criteria for this purpose, ie: the technology is pre-BA and falls more into the realm of antique equioment. Again, I will be happy to submit reviews of them if the editor feels it would serve the purposes of this list.

73 and good hunting!

I have been out of the boatanchor loop for a while. Could a couple of you guys give me an idea what the going price is for Collins R-390A (nameplate serial number looks in the right range) . Condition 9, in a desktop BUD cabinet. If I remember, the unit was in service with NASA and may have markings on the front to indicate this. The unit would come with the companion SSB detector. An original Army or Navy Depot manual would also accompany it as well. The units worked when I had them fired up a couple of years ago. Shipping from Houston.

John,

I've tried this with pretty good results, make sure the grey is cured
for a few days, and wrap your cloth, (baby diaper) over a board or
something to hold it flat while you wipe, you may want to slightly
dampen the cloth with thinner. This also works well with antique
radio knobs.

The best method is sorry to say, a good brush with all but 1 bristle
removed and a magnifying glass and very steady hand.

Good luck

I got a reasonable match at a auto paint supply. Sounds like
you have spray equipment, auto acrylic enamel is easy to
use and very durable.

Fill the engraving with a paint stick, wipe off the excess with
mineral oil and kleenex. Get paint sticks from an engraver,
or get white ones from the auto supply, used for touching up
tire lettering.

1647. 813 GG Linears

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-26 00:00:00 UTC
From: jupiter@europa.com
Message-ID: <jupiter-ya023580002602971411110001@news.europa.com>
Source record: 122537

Saw questions asked about using 813's in grounded grid linears. I built one of these about 20 years ago.

Problem is that in GG design, plate capacitance of 2 or more tubes makes it very difficult to resonate pi output network.

Still, you can always pull one of the tubes out in 2-3 years when 10meters opens up :) :)

With 3 tubes in parallel, 160m-15m should be fine, especially if you use vacuum variable for tuning.

Rob.

1648. hallicratfers gimmic

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-26 00:00:00 UTC
From: Keith Piercey <kpiercey@atcon.com>
Message-ID: <5f2k54$8nr$1@thor.atcon.com>
Source record: 122538

I'm repairing a Hallicrafters SX-62. The schematic shows a capacitor labeled "gimmic". Anyone know what that is? All the others are labeled and valued.

The "gimmic" is connected between the antenna and the plate of a 6C4 xtal oscillator tube.

Can I assume it's just a coupling cap of maybe .01 or so ufds?

Message-ID: <3314EE99.3A6F@pop.erols.com>
Source record: 122539

Got a pair of mod xformers at a flea market, one interstage and one output. They were marked(magic marker) for a pair of 807's. Should be good for 120 watts or so. Got them home and found the interstage xformer had an open primary. I got taken. Oh well. The output has the marking TC-642 does anybody have any specs for this ???? I don't trust the magic marker labels.

Thanks, 73's

Don KC1AT

1652. Re: Ham Radio GROUND

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-26 00:00:00 UTC
From: Bill Karle <karle@bldgsvcs.lan1.umanitoba.ca>
Message-ID: <33152059.909@bldgsvcs.lan1.umanitoba.ca>
Source record: 122542

Tim Kryman of OPT/UTC wrote that a releative needs info on how to ground a ham radio.

One way to get a useful ground is to connect the unit to a cold water pipe which is routed directly to the earth. This was suggested by the writer. Even if the ground wire has to be routed down to the first floor to get access to a water pipe, it is better to do this than nothing.

Another way is to run a ground wire from the equipment to a gound rod of at least four feet in length driven into the earth.

If the house has modern electrical wiring, then it has three terminal electrical sockets. The middle U-shaped terminal is at ground as is the outlet box. Affixing a ground wire from the radio to the screw holding the cover plate in place will get a ground.

Each of the above three methods achieves a direct current (DC) ground which protects the user from electrical shocks. Each of the above will achieve a radio frequency (RF) ground as long as the entire length of wire from the radio to wherever real ground is located is not a quarter wavelength or multiple thereof. If the ground is a quarter wave or multiple, then the ground wire acts as an antenna and the radio becomes above RF ground. When that occurs, the radio may behave erratically and the user may experience uncomfortable RF burns. The way around this is simple and can be used even if you don't have a DC ground.

What you do is take several wires each of different lengths, none a quarter wave at any ham radio frequency, attach each to the ground terminal and then spread them on the floor, run them along the baseboard. Voila! A good RF ground but no DC ground.

Bill, VE4KZ

Date: 1997-02-27 00:00:00 UTC
From: Joe Fitter BV/N0IAT <joentam@transend.com.tw>
Message-ID: <33161D52.69D4@transend.com.tw>
Source record: 122453

I've used liquid paper (white correction fluid) with excellent results.
Once dry, it can simply be scratched off of the grey case with
your finger nail or plastic (softer than painted surface) object.
It's easier to use (in my opinion) than paint.

The stuff stays very white in color and does not rub or flake off
once well dried. You can use the built-in applicator brush, and
not-so-steady hands wont spell disaster.

rgds,
Joe

1663. Help: Collins 75A1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-27 00:00:00 UTC
From: Bill Smith <bilsmith@pacbell.net>
Message-ID: <331541E9.4527@pacbell.net>
Source record: 122454

Hi, I am fixing a 75A1 for a friend. I have checked all the resistors and replaced all the tubular caps, but the receiver seems to be about 10db less sensitive than it should be. All tubes are ok, as are voltage and resistance measurements.

I have heard there can be trouble with feed-through capacitors in the front end. (1) How are they tested (how do they fail?) (2) What is/are suitable replacement(s)?. I notice one has been replaced already with a ceramic cap. Would silver micas be better, or can replacement feed-throughs be obtained? Could these cause the weak sensitivity in this set?

Or any other ideas? Some stage gain info on the IF stages is listed on the Sam's schematic, but details are pretty scant.

Thanks in advance.

Well, I am sure you know that FSK stands for frequency shift keying, which was used for radioteletype. I would guess that AM stands for regular voice receiving, but that seems odd since FSK was usually received with the BFO activated. The scope is common for tuning two FSK tones (mark and space). When properly tuned, a cross-hair pattern (90 degrees opposed) would be visable on the scope, each line representing one of the tones.

You might tune around, there may still be RTTY signals broadcast.

Hope that helps.

Right-on Larry. A gimmick is usually about 3-4 twists of insulated
solid hookup wire yielding about 3-4 pico farads. This is "loose
coupling". If not enough, make more twists! ;-)

First, it may help to verify that indeed there is a loss.
A good way is to compare it against another 75A1.
If another 75A1 isnt available, then a calibrated signal generator
can be of help. A common rule is 50uv for S9 although this varies
quite a bit between designs.

You did not mention alignment. If you did not realign the IF and RF
sections this could easily rob you 10db.

It may be hard to find 10db of loss, especially if its not all lumped
in one place.

One good way is to inject a signal into each stage, starting at the
last and compare the resulting S-meter reading. In general, each
stage should give at least 12db of gain, (converter stages a bit
less). 12db is about 2 S-units. If you dont trust the S-meter, turn
off the AVC and measure the AF output voltage. 12db is about 4 times
the voltage. You'll have to keep reducing the signal generator output
to keep the radio from overloading, especially on the earlier stages.

>Could these cause the weak sensitivity in this set?

Feed-throughs can fail like any other capacitor. Usually by shorting
out, although opening up is not out of the question. Anopen
feed-through will usually result in instability and/or oscillation,
although reduced gain could happen too. in a 75A1, I suspect you
could use a good ceramic disk with short leads as an adequate
substitute. If it was a UHF radio then a feedthrough might be
required.

Good luck.

Many years ago I repainted the front panel of my SP-600. A friend
that worked at an engraving shop gave me a jar of white paint
formulated for filling engravings. Today this liquid paint may have
been replaced with paint stcks. Check with your local industrial
engraver, I'm sure they could tell you.

Hey, I don't see any ham application for a pole pig. I have heard of some radio stations where the plate transformer in their 10 kW transmitter burned up and they were able to borrow a pole pig from the local power company to get them going again. You're talking about a whole lot of power here, not to mention the weight and space it takes up. Besides, when you hook one up backwards, you're getting maybe 4 killer-volts out of it. That's not something to just mess around with!

Too bad about the SX-28. I would feel hosed too, you basically were just dealing with a dishonest person sounds like.

For that very reason the Collins Collectors Association has developed a rather strict grading standards for Collins gear, which can be viewed at the CCA website. They at least create a level playing field if people would just be honest.

I think that last IF statement is the crucial one. Problem with any of the 1-10 or Good-Better-Best systems (including the CCA standards) is you are still at the mercy of the sellers honest streak (or lack thereof). Even the CCA system can't be used rote -- ok, so I tell you that the 32S3 I'm selling is Good on the scale -- well, what EXACTLY does it look like. What does "Good" mean to you? Its like the X.25 protocol spec -- four developers can develop to the spec, and none of the X.25 engines will be able to talk to each other.

If I say its Good or a 7 or whatever, there's nothing that prohibits a seller from adding (or a buyer from asking) that there are a few paint chips around the bandswtich knob, one extra hole has been added on the rear apron, there is dust (heaven forbid) on the chassis, etc.

"Yessir, the 32S3 is a 10, absolutely perfect. And you wouldn't believe how fanstastic it looks with the high gloss purple front panel and contrasting metallic black trim ring. That paint job is so good you hardly even notice the four extra 1" diameter holes. Works perfectly, and most of the tubes are there" :-)

Pole pigs were in use extensively by hams as far back as the late '40's.
A 4-1000A requires 6000 volts to make it easier to drive and these were
just the ticket for these and other tubes that hit the market after SSB
became popular. The price was usually right (like, free) if you had a friend
at the local power company, as well as the poles they went on in a lot of
cases. After removing one from its oil-filled case, it is no bigger than a
transformer you would obtain from commercial sources. Very few of these
failed in amateur service for obvious reasons! I built up a power supply with
one of these brutes in the mid 50's. It used 3B28 rectifier tubes and a big
choke scrounged from military surplus. Variacs were dirt-cheap back then also,
so I ended up with a 0 to 6000 volt @ 2 amp variable power supply that served me
many years running many amplifier projects.

I've been looking at a flurry of activity in recent times regarding the need for 516-F2's for "incomplete" KWM-2's and 32-S's. I think that most of the desires come from folks wanting to put those aforementioned rigs on the air as opposed to waiting around for a 516 to surface. C'mon folks. A power supply for any of the S-lines (or other BA xcvrs) shouldn't be that hard to assemble. This is what this hobby is all about. Scout around at hamfests for the appropriate components. Get to know your Radio Shack, Allied, Newark, swapnets, etc. better. Contact some of the OT's for parts and technical help. It's not like your trying to troubleshoot a ricebox anyway. So pick up that soldering iron, borrow/find some greenlees, get out the hand drills and enjoy! Cal, N6KYR. Homebrewing since age 13 and loving it!

I am selling my Globe Scout Model 65A transmitter. rated at approx 65 Watts CW and 50 Watts Phone,. covers 160 theu 10 meters. Easily restorable shape; probably needs a good cleaning. Front panel has a couple of spots of surface rust (small, dime size). No dings or dents. Complete with the original owners manual. $85, plus shipping. Should make a good low cost BA xmtr. Thanks, Jon K1VVC (Greenville, SC).

There are 2 SWAN nets per week, Sunday 14.250 4pm central, Thursdays 2pm Eastern on 40 m (sorry can't remember the freq.) There might be another but I can't recall the details.

I check in most Sundays, and so do 15-25 others. See you there!

It's nice to see some content here, rather than just ads.

There was a time when I wanted a copy of The Radiotron Designer's Handbook, I think mainly because peopled held it in high esteem. That was almost 25 years ago, when tubes were still fairly common. I finally found a copy about two years ago, at a used book sale. It's the 1952 edition, and was only $2. It was only by accident that I looked in that section, but the following year I picked up a couple of other similar vintage and quality books at similar prices. I realize that I am pleased just to have it. It is a great book.

Ham Radio magazine reprinted the Collins SSB book, by the way.

I thought the original had a foldout schematic of one of the KWM's or the S-Line. It's been a long time since I saw a copy, so maybe I am wrong. I do have a strong remembrance that there were details of something or some of Collins amateur gear. Maybe there was a later edition that did include schematics? I know I am thinking of the original, and not the Ham Radio reprint.

I traded for a remote tuner made by the CAI (Communications Associates Inc.) of Huntington Station, New York. I've tried the telephone, and didn't get anywhere, so I can only assume they're out of business. The one I have doesn't have the control box, so I'm going to have to build one. Does anyone know what voltages are used, and which pins to apply/receive the voltage from/to? (I guess I'm asking for a schematic or owners manual to make my request simpler!) It's a model CU-4-6. I want to use it in an antenna project this coming week- thanks for any information! 73, Web- KR4WM

>Another alternative is to use the HP-23 or HB-23B heath supplies for the 32S transmitters. They're solid state and not as rugged and you'll have to rewire the power plug to match the Collins pin-out, but do a good job and don't suffer from the overvoltage problem that some of the 516-F2s do (low voltage on one 516-F2 I have approaches 350 volts which is really hard on your transmitter). Caution: They DO NOT have enough horsepower for KWM-2s however, I believe the limitation is the filament current capacity--someone correct me if I'm wrong. I picked up an early HP-23 version at a hamfest for $25 bucks to use with my 32S-1. I had to go inside and change the tap from 250 volts to 300 volts, but the HP-23Bs have a toggle switch built in to do that for you.
>
>Jim, N4KH

Building them is not that difficult, but a bit scary if you've never dealt with 750 volts, or it should be a bit scary.

One note, if you build your own, I have had much better results using a dedicated transformer for the plate, and a second transformer for the lower voltages.

I'm posting this for an "older old timer" who doesn't have internet access.

He has a Heathkit HD-10 Electronic Keyer that has developed some problems and somewhere in one of his moves, he lost the manual.

What he is looking for is a ...COPY... of the complete manual... parts inventory, assembly and checkout procedures, schematics, etc...

If you have the manual for a Heathkit HD-10 Electronic Keyer, we would really appreciate a copy of the complete document... and of course we are more than willing to reimburse all copying and mailing expenses.

Thanks

If you don't find a Drake replacement transformer (have you tried
calling Drake? - They have moved recently, so you will have to get
their new phone number) try the Peter W. Dahl Company - they have a
web site, but I don't have it bookmarked - you can find it thru Yahoo!
or any other good web search engine.

Good Luck!

Well,

Here will be the start of another debate. I'm with Phil on
this. On the other hand Dan has a point too. If you are an
appliance operator and don't have a clue as to what you are
playing with, it could be lethal. Now, this is also related
to the Code-NoCode stuff. Huh? The Amateur Operator should
be knowledgable enough about his/her equipment to understand
the workings, both theoretically and practically. I'd trade
off a Code requirement in a New York minute, if a true test
of understanding the equipment and operating practices were
in place.

1712. FS: Distortion Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-02-28 00:00:00 UTC
From: jkh@meaddata.com
Message-ID: <5f6um8$5nb@mailgate.lexis-nexis.com>
Source record: 122402

Folks,
I have a B&W Model 400 Distortion Meter for sale. To quote from the Manual:

"The B&W Model 400 Distortion Meter consists of a variable frequency
Wien bridge included in a negative feed back amplifier, a calibrated
attenuator and a high gain vacuum tube voltmeter. The method of measur-
ment consists of supressing the fundamental and then measuring the R.M.S.
amplitude of all the unwanted frequencies(including noise) as a per-
centage of the R.M.S. value of the fundemental."

o The frequency range
As a distortion meter - fundamentals from 30 to 15,000 CPS,
measuring harmonics to 45,000 CPS
As voltmeter and D.B. meter - 30 to 45,000 CPS

o Sensitivity
Input voltages between .3 and 30 volts

o Ranges
Distortion measurments
20 to 100%, 5 to 30%, 2 to 10%, .5 to 3%, and .2 to 1%

This meter may be used to check distortion of radio transmitting equipment by
use of a linear detector. It may be used as an audio frequency(30 to 45K) VTVM
for voltages between .0002 and .3 with +/- 5% accuracy(50,000 ohm input imped-
ance). It may be used as a single frequency filter or a single frequency amp-
lifier. It may be connected to an oscilloscope. It will measure noise in radio
transmitters, A.F amplifiers, telephone equipment, studio and line equipment,
etc.

I'm selling this 'as is'. It is in good cosmetic condition, only having a minor
ding on the back edge of the case. The front panel is excellent. It has not been
abused, and it is clean. I assume it is in working order or may be put in working
order with a minimum of effort. I have *two* original manuals for it as well. It
does not have a power cord. It was quite frayed and I cut it off.

I will sell it to the best offer or will trade it for whatever. I am looking for
Novice crystals, 20's/30's radio magizines, manuals, books. Would be interested
in a project receiver, the older the better. Make me an offer.

2,000-WATT HENRY 2K-4 LINEAR AMPLIFIER F/S

Yes, this is the big one, a console model amplifier that will run all day on a pair of Eimac 3-500Z tubes and not even flinch.

Henry Radio made these to awesome standards, with heavy-duty everything. The unit weighs 135 pounds and stands 30 inches tall and is about 16 by 18. The front panel features two quite large meters and easily-accessible controls.

The 3-500Z final tubes have less than 50 hours use.

The unit is rated 2000 wats P.E.P. and will operate on 80-10 meters and, with very slight modification, on any frequency between 1.5 and 30 MHz. It will work on SSB, AM, FM, FSK, or RTTY.

Currently it's wired for 110 VAC, 30 Amps, but can also be run at 220 VAC at 15 amps.

If you're looking for a quality workhorse amplifier in flawless condition, this is for you.

Includes manual and schematic.

Amplifier is located in Sacramento, California, and in view of its mass and pristine condition, pickup is suggested.

Comparable amplifiers using two 3-500Z tubes like Kenwood's TL-922A usually sell for over $1,000.

Asking $795, or may consider tradng for quality 440 MHz repeater controller/duplexer/?..

Please contact me by e-mail at bashin@calweb.com or telephone me after 8 am Pacific time at (916) 441-4096.

> -bob

Caution is advised when using the Heath HP-23 supplies, primarily because of limited filament power. The KWM-2/A requires nearly 10 amps from a 6 volt supply and 5 amps from a 12 volt supply.
- The HP-23 has insufficient filament capability under any circumstance.
- The HP-23A and HP-23B have sufficient capacity only if filaments are connected for 12 volts, but not for 6 volts.
- Only the HP-23A offers variable bias which allows it to be used without modification to power the KWM-2/A. Unfortunately, the bias supply in the HP-23A will not adjust to the recommended bias voltage needed by the KWM-2/A. This results in noticeably low output. Also, the HP-23A bias is not very stable and the KWM-2/A power output and the s-meter zero will vary noticeably as a result.

The bottom line is that only an HP-23A can be used directly to power a KWM-2/A but even the HP-23A is not a particularly good supply to use.

If you have heard of them, Antique Electronic Supply out in Tempe, AZ sells paint sticks. Most 20's vintage broadcast receivers used a white lead/beeswax mixture as a filler for their engravings. We (old time antique radio collectors) use paint sticks with very good results to restore front panels. Good luck with your 390A! :-)

>quite fortunately, YOURS.

That's a terrible analogy, Mustang. It's more like every article that
comes across one's newsreader *does* end up in one's grocery cart,
and we have to pick it and toss it out. It's simple to say "Just
hit the N key" but consider the costs involved in transmission and
storage of the garbage. It's better to just use restraint.

Why did this topic appear in r.r.a.boatanchors? - haven't seen any
insults in here at all.

The antenna you are describing sounds like a 20 meter vertical. It will
not receive very well on other frequencies. As far as lightning
protection goes, drive a few ground rods at the base of the antenna, and
connect the radials and shield of coax to it. Use one of the lighning
arrestor products that are made for protecting your radio. I use a
Alpha Delta surge arresting coax switch which has a position for
grounding all antenna inputs, it also has a self sacrificing fuse type
assy. inside.

While looking through some books that were left to me as part of an estate, I came across the following items.

A folder from Atwater Kent Manufacturing dated 1922. This folder contains instruction sheets for the following pieces of equipment: Detector Amplifier, 2 Stage A.F. Amplifier, Detector Amplifier and 2 Stage amplifier, Detector Unit, and Coupled-Circuit Tuner. The folder is also labeled as "Form No. 34 NOV..1922"

Four small booklets fron Gernsback's Radio Publications, New York City.
Gernsback's Educational Library No. 1 - How to build 4 Doerle Short Wave Sets.
Gernsback's Educational Library No. 2 - How to make the Most Popular All Wave 1 and 2 Tube Receivers.
Gernsback's Educational Library No. 4 - All About Aerials
Gernsback's Educational Library No. 7 - How To Read Radio Diagrams.
It is interesting to note that the price of these books in 1928 were 10 cents each.

The other Books were a 1949 and a 1953 ARRL Radio Amateur's Handbooks and a Radio Engineering Handbook by Henney, second edition dated 1935.

The Atwater Kent and the Gernsback booklets make for some interesting reading. I may be persuaded to part with them if you are interested please e-mail me.

From: caschwark@aol.com
Message-ID: <19970301050701.AAA24999@ladder02.news.aol.com>
Source record: 122427

Hello. An acquaintance of mine is working on a research project on the history of the old AM station in Villa Acuna, Mexico - XERF, 1570 kHz. Villa Acuna is right across the river from Del Rio, Texas. He's interested in obtaining a schematic(s) of the old RCA "Ampli-Phase", 250 KW transmitter. From what he's learned, RCA always had setup and operating headaches with this transmitter and didn't leave any prints behind when they threw in the towel. This unit is now in danger of *REALY* becoming a boatanchor, six feet under. Anyone out there have any leads on schematics, persons who may know someone, ex-RCA emplyees, etc?? Since my friend isn't "on-line", please refer any and all info to me at my e-mail address.

Thanks in advance,

Chuck Schwark

k4fb@aol.com (K4FB) whistled a happy tune like:

|>I have a very nice Gonset Communicator III 6 meter tranceiver and need a
|>manual or a copy. I have tried W7FG manuals and he doesn't have one.
|>Does anyone out there have one that they would like to sell or copy.
|>Please let me know if you do.

Terry - here is where to find a list of dozens of other suppliers
of manuals.

Some of them are sure to have the manual you need.

Look at the Ham Radio Resources section at:

http://www.mnsinc.com/bry/

and click on MANUALS for the list.

All the best - from bry

Or, in other words, garbage. The next time you are in a supermarket checkout, check out the tabloid headlines, Dean. There is no shortage of garbage. If you don't want some, YOU can choose not to put any in your grocery cart. The Internet has garbage. The choice of reading it is, quite fortunately, YOURS.

Hi - and thanks for reading. I am posting this for an old-timer/neighbor who wants to start selling off some of his gear. He is the original owner of this equipment (purchased in 1974). Original manual and repair records included. Both the 350XL and matching 350 PS power supply/speaker are in very nice condition both electrically and cosmetically. He is asking $400 plus shipping from San Francisco. If interested you can call him (Gus, W6LAS) at (415) 564-4578 or leave me a message and I will contact him for you. 73, Pat (W7YCN)

1756. Rec.ham-radio.swap - Let's use it for "Boatanchor" swapping!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-01 00:00:00 UTC
From: mc@shore.net
Message-ID: <5f9mbn$t8p@northshore.shore.net>
Source record: 122438
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Hello Boatanchor, Firebottle and "real radio" Fans:

I subscribe to several newsgroups including two that are devoted to buying, selling and swapping radio related equipment. The best known is rec.radio.swap. However, there is another rec newsgroup called rec.ham-radio.swap and it is seldom used mainly because it was the predecessor of the rec.radio.swap newsgrup and no one bothered to eliminate it. It is still alive and kicking but hardly anyone seems to use it anymore.

I propose that we use rec.ham-radio.swap as a "boatanchors" buy-sell-swap newsgroup and urge others to do likewise. Having looked over the more popular rec.radio.swap I find that it also contains old broadcast sets, commercial land-mobile equipment, "appliance" type Yaecomwood stuff and what have you in addition to "real" radios.

First of all, please check your provider to see if you can subscribe to rec.ham-radio.swap. If you cannot subscribe ask your provider's netnews or usenet administrator if they can get it. Let's see how widely it circulates before we take it over with our wants, sells and swaps.

Since the rec.ham-radio.swap newsgroup's original rationale and charter must have specified ham radio equipment I see no need to do anything with the usenet powers-that-be inasmuch as our beloved "real radios" are certainly within the guidelines set forth when the newsgroup was created.

Just an idea..........

If we decide that this is a good idea to try we could always cross-post our messages to both rec.radio.swap and rec.ham-radio.swap and post pointers to other newsgroups to see if we can use the system to have our own newsgroup just for buying and selling the stuff we collect and use.

Message-ID: <3318DF1F.780F@transend.com.tw>
Source record: 122357

Hi,
Title says it all. What should I expect to pay for the following
items:

Winged Emblem 32S3 transmitter (not B).
Winged Emblem 75S3 receiver (not B or C)
Power supply 516f2
Microphone SM2 with Collins mic plug

Trying to get an idea of the cost of an
S line. Price should assume good electrical, fair to good
mechanical condition.
thanks,
Joe

Message-ID: <33190af3.3009121@news-3.exis.net>
Source record: 122362

I have a been looking for a very nice Drake "C" Line for about 2 years. Last week at a hamfest, I spotted and purchased one. Problem is, I also picked up some Collins and have space for only one. The Collins won.

So, I am selling this "C" Line:

T-4XC #29,825
R-4C #18,799
MS-4
AC-4

Receiver has the 1.5, .5 and .25 filters and the 4-NB noise blanker installed. I also have a fairly complete set of spare tubes including some of the more exotic ones.

I have enjoyed using the rig over the past week and it looks and works great.

Best offer over $675

Drop me an E-Mail, please
crippel@exis.net

1773. FS: Yaesu FRG-7, Mellon parts, more!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-02 00:00:00 UTC
From: pixlpushr@aol.com
Message-ID: <19970302053300.AAA20907@ladder02.news.aol.com>
Source record: 122364

Yaesu FRG-7 receiver with USB-CW, LSB, AM, AM/ANC modes.
11.6Mhz-1600Khz. No manuals or accessories. $250.

Navy SG-44C/URM-25 RF Signal Generator with crystal tuning, 10KC to18
megacycle tuning, made by Federal Mfg. and Engineering Company.
Latched front cover is missing, very good condition. Approx. WWII vintage.
Make offer.

Boxed set of 4 interchangeable tuning coils for Mellon antique receiver,
in fitted case. Looks like hand-wound tuning coils over glass tubes, with
knob and integral front panel dial. These have apparently never been used.
Very old, in new condition. Make offer.

Manual for a military field radio device, 'Frequency meter set SCR-211-0
and SCR-211-R' by the Rauland Corporation. Make offer.

General radio company 1421-J variac, 550MF, in handmade plexiglas
case. Dial marked in increments from 25-240. Alligator-clip leads
attached. Make offer.

Assembled Heathkit GC-1000 Most Accurate Clock. Syncs to a
broadcast time signal. Loose case but otherwise good condition. Make
offer.

Vintage R. Mack & Co. microphone, metallic blue tapered mic with
metal base. Unusual design! Mic stands vertically in a gimbal
mount. 1/4" connector. Make offer.

Prefer pickup in SF Bay Area. Email Pixlpushr@aol.com.

1774. S20R for Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-02 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19970301182300.NAA09598@ladder02.news.aol.com>
Source record: 122365

I have too many radios. I bought this S20R a few weeks back,
and ended up with an unexpected SX28 in the interim. I don't
have room for a SX42, SX28 and S20R in my small hamshack, the
the poor S20R needs a good home!!

Condition 6 (better in my opinion, but don't want hard feelings!)

problems noted: Slight paint chips at metal edges (top cover edges,
etc.)
White lettering on front panel is showing signs
of normal
wear. Otherwise, front panel is good. Knobs
good.
Rust SPOTS on chassis -- looks like where some
water drops hit at one time. Very light
surface, maybe
10 percent coverage at worst. No cabinet rust.

pluses: Radio is recapped, fused, and has new line cord.
Radio is aligned and plays good. Recapped means
ALL
papers and electrolytics are new stock
replacements, mylar
caps used.

Asking price: $110.00

Good grief -- what's the world coming to!

It's gotten to the point that if something runs more than 12 volts, people wring their hands over it. Obviously, any high voltage transformer deserves respect, but there isn't anything unusual about pole pegs in that respect. I built up a HV supply using one when I was 16 and I'm here to talk about it -- I left mine in the oil-filled case and ran a variac into the primary (formerly the secondary), which I think is the way most people handled it. Even in the case, a 4 kva model fits into the bottom of a normal rack. Of course, it's even cooler if you mount the 872 (or other tube) rectifiers behind a nice plexiglass panel for maximum purple haze. I understand pole pegs have become harder to come by because of the PCB disposal problem, which is too bad, because they run forever.

1782. Hallicrafters SX-115 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-02 00:00:00 UTC
From: rhys@ix.netcom.com
Message-ID: <5fcojl$g99@dfw-ixnews7.ix.netcom.com>
Source record: 122373

Hi Gang:

Should have played the lottery this week -- I've been VERY lucky and have found an SX-115. I'm applying CPR and solder as needed but have two important questions to any SX-115 owners with a minute to spare.

What two (?) pins of the rear accessory octal socket are shorted for normal operation and on the right rear section of the chasis sits a small sub chasis with two crystals and two tubes. What are numbers of

those tubes?

Hopefully will be some good news to report here shortly however it IS obvious that other hands have been here before me and sometimes that's

not good. We will see.

Thanks in advance for all your help.

For Sale

Hewlett Packard 185 1 Ghz sample scope with dual channel plug in, probe set, works well, and extendible through 10 Ghz. Useable well over 1 ghz. Sensitivity down in the low MV range. Packaged in the UF-170 series form factor a bit robust. Works fine and is in good condition. A must for the serious RF dude experimenter or for chasing those 800-1000 MHz VCOs and lock loops. This is a BIG scope. $200 (offer) plus UPS on approximately 75 pounds from zip 95827.

Thanks for the read.

Just got a ts440s and have been told the ssb audio is low. FM and AM
appear to supply sufficent drive, whils the SSB clarity sounds like an
early modle HT with the same mikes as in the FM/AM tests?
I can't seem to locate the internal ADJUStMENTS any help would be really
appreicated.

From: George Gonzalez <grg@boombox.micro.umn.edu>
Message-ID: <88010.grg@boombox.micro.umn.edu>
Source record: 122299

"Pole Pigs" are indeed very nice, heavy duty transformers.

Personally, I wouldnt use one, as most of these were cooled in PCB
liquid, which is extremely nasty stuff. Not worth the risks IMHO.

1798. Elenco 77 Info wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-03 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <5ff98f$6j2@camel1.mindspring.com>
Source record: 122300

I recently got an Elenco 77 with manual copies etc. This rig was made by W9OHM at Electronic Engineering in Wabash, IN in the mid 50's. Not to be confused with the current Elenco who make test gear.

Does anyone out there have one or remember using one? I want to make sure I have all the parts (2 optional chassis plug into the rear of the main chassis). I want to inquire about the original paint color, and the VFO (says 1 Khz but how), and any tips you have.

Reply by E-mail and I'll summarize to all that reply.

Dave K4JRB

1799. WTB: Collins 75S-3

Hello, and thanks for reading my post. Does anyone have any suggestions on where, or how I could get the cabinet of a Heathkit DX-100 refinished? The paint is not terriable, but just super stained, and no amount of cleaning seems to take it off. Is there someone, or some company that you can suggest to do this? Thanks in advance for yoru help!

I just recived a few pieces of Collins Gear from a local Sale:

KWM-2 Transciver, No Ext Power supply..That is that I have found yet..
Radio Looks Mint, all logo readable, Collins plate intact, Original Meter.
I opened the top lid, all tubes in place and clean inside...$125.00

426T-1 Inverter? Looks to be a Rack Plug-in for something....$65.00

TE-21OD2 Power Supply, Rack Mount. For 6 and 15 Volts with Power Cord.
Heavy! $45.00

These Items sold AS-IS, with no Warrenty of any Kind..Yes the Prices do
include UPS/COD shipping anywhere in Cont.US

Source record: 122315

Not to be a worry-wart, but before you use a "pole-pig", pls read and understand the following info about PCB's , taken from an Environmental health and safety manual. Then use your best judgement:

Polychlorinated biphenyls do not break apart chemically when released to the environment. Rather, PCBs accumulate in the tissues of living organisms, resulting in increased concentrations of PCBs when they reach man. Documented tests on laboratory animals show that PCBs cause REPRODUCTIVE FAILURES, GASTRIC DISORDERS, SKIN LESIONS, AND TUMORS.

Studies of workers exposed to PCBs have shown symptoms of CHLORACNE AND OTHER EPIDERMAL DISORDERS, DIGESTIVE DISTURBANCES, JAUNDICE, IMPOTENCE, THROAT AND RESPIRATORY IRRITATIONS, AND SEVERE HEADACHES.

Because PCBs are considered carcinogenic (ref. ES&H Manual Section 5.17, Carcinogens), exposure must be kept as low as reasonably achievable, using the controls discussed throughout the remainder of this ES&H Manual section.

1828. R-390A coaxial cable

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-04 00:00:00 UTC
From: davidb@scn.org
Message-ID: <E6J3Ar.Ez9@scn.org>
Source record: 122320

What kind of coax is used to connect the various subchasses in an R-390A? It looks like it could be teflon-jacketed RG-174/U. I'm hoping it is, as a) the cable in mine is in pretty ratty shape b) I saw several spools of teflon jacketed RG-174 yesterday at a surplus electronics dealer.

On a related note, my IF subchassis is just fine. I'm embarrassed to admit it, but I had made the stoopid error of not fiddling with the frequency control on my signal generator after I got past the filters. Turns out it was off by enough that the filters were filtering its signal right out of existance. A little tweaking on the generator and the signal came through the filters loud and clear. Oh well, at least I bothered to replace C553 with a modern 400 volt mylar, so it wasn't a total waste of effort to pull the IF chassis.

This means the next suspect is the RF subchassis. Since most of the thin coax cables originate seem to originate under there, it seems like now is a good time to replace them since I'm going to have to pull the RF subchassis anyhow. Another question: how much of a pain is it to disassemble and re-use those connectors that look like little BNC connectors? (I know of a good source for connectors, and suspect I can probably order new ones, but I also suspect they won't be cheap, so re-using would be nice.)

Last question: any good likely suspects as to what in the RF chassis might be at fault (to review, the symptom is that there is white noise and no stations received, no matter where I tune)? I now don't think that the RF gain control pot is at fault; although it has drifted high, the noise persists even if I jumper across it and remove it from the front panel. This would seem to rule out a noisy internal connection and a noisy short to ground.

I have a Hallicrafters S-38C gen. coverage receiver taking up space. I'd like to find it a good home. Receives fine on all bands, but it does have an AC buzz and shows some current to ground from the antenna terminal (probably the same problem), so it's a fixer-upper. Make an offer (that at least covers shipping ;).

> Dennis N6TUQ

A "pole pig" is "simply" an AC transformer, used by the electric utility companies to transform or "step-down" the relatively high AC voltage used for delivery of power from the sub-station to the consumer (usually to 230 volts). The output voltage of the sub-station may range from 4800 volts to 12,000 volts, or so, depending on the length of the delivery path. They are termed "pole-pigs" because they are usually mounted on a utility pole (some are contained in underground storage vaults), and are quite large, heavy, and unwieldly. The transformers themselves look like an ordinary core-wound transformer, but they are encased in an oil bath (for cooling and thermal stability), which is contained in a cylinder which usually looks like a small barrel, with insulated terminals coming out the top or side.
The older transformers (the ones most likely to be on the surplus market) used cooling oil which usually contained PCB's. If you read George Gonzales' note you will see that this oil is highly toxic, and clearly to be avoided. My experience with PCB based oils in commercial broadcasting, where specially trained PCB clean-up crews are required to dispose of this stuff, made it very clear to me that I don't want to around this stuff. Most utility companies are trying to replace whatever PCB-based components they have as quickly as they can.
Aside from the PCB question, the transformers themselves are usually rated to deliver at least 10 KVA and some of the bigger units will deliver over 100 KVA. A 10 KVA transformer which will convert 9600 volts to 220 volts will put out in excess of 1 amp at 9600 volts when the secondary is reverse-driven with 220 VAC! At 3000 volts it will easily deliver 4 amps. This is considered a "small" transformer by the power company. Simply put, you don't stand a chance of surviving an accidental contact with that 9600 volt winding. There will be no second chance. At least with a standard HV plate transformer, the windings are current-limited; there is a chance for recovery. Not so with the pole-pig; it will deliver almost welding currents for short intervals.
I don't advocate the use of these transformers for "experimental" purposes, in spite of the fact that they have been used sucessfully by many amateurs. They are very un-forgiving and dangerous not even considering the PCB question. BE CAREFUL!

1845. Interference from True Fitness Treadmill! Help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-05 00:00:00 UTC
From: fallowsj@cadvision.com
Message-ID: <5fiuiq$1lse@elmo.cadvision.com>
Source record: 122329
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I continue to have severe radio interference to short wave from my neighbour's treadmill (True Fitness Model 450). The interference is in the form of hash pulsing about twice a second (depends on treadmill speed) all the way from BCB through about 20 Mhz. It is a bit like the noise from a TV oscillator (peaking every 15-20 Khz) but pulsating rather than steady. It is between S7 to +10 dB, extremely strong.

The manufacturer sent my neighbor a line filter (which they say cured two previous occurances of this interference) but it did not help. I sent them a fax saying this, but that was two weeks ago, and I have heard nothing back.

I am trying to get the attention of True Fitness, and could use some other cases. If you have experienced this intereference, I would appreciate hearing form you.

Also, if you have solved this problem, I would appreciate your advice even more.

I have a a treadmill made by a different manufacturer and it is absolutely RF-silent, at all speeds, so I know this is not an issue with all treadmills. At this point, however, I do not know if this hash is emitted by all True Fitness Model 450's, or if there is something wrong with my neighbor's unit.

I am attemping to put on one web site all locations of SERVERE WEATHER SPOTTER CLASSES. If you know of spotter classes in your area please send the schedule to me via e-mail or US mail and i will scan it into the web site. At the moment I will be using the weather page at www.axnet.com/united/wxlinks.htm . You may link your site with it, also let me know if you do and i will return a link back to yours. With each class please give;

date:
time:
location (hall or college and city,state):
hosted by:

or just send me the URL of a schedule that you've seen on the internet and i will do the rest.

send e-mail to:

united@axon.axnet.com

send US Post to:

n9npp/matt
1034 piccadilly court
bolingbrook, il usa

Very nice Collins 75A3 receiver. Has 3 and 12 kHz filters,
crystal calibrator.
Coil cover is there. Radio is very clean and looks sharp!
NO rust, dings, chips!!!!

Asking $450.00, or serious offers?

Our What We Say Is What You Get policy means that we don't relabel tubes with phony brand names,
or put fancy gold lettering and boxes on them, or tell you that little elves in the Black Forest
made them in order to charge you 5 or 10 times what they're worth. We guarantee the goods you get
are actually the brand and type advertised. Power tubes are tested and matched at typical operating
voltages and dissipation using our British military valve checker.

Nice little early Hallicrafters receiver! This cute radio has been fully
recapped and aligned and plays beautifully!
Condition is good; lettering on front panel shows some wear
from use, cabinet is good.
I have too many big sets (SX28 and SX42) and this one
unfortunately must go.
Asking $100.00
Will ship double-boxed with styrofoam protection.

Can't help you, but just hafta comment--Boy, Kenwood really supports their equipment huh? Guess they want you to buy a new TS570, which ofcourse will be an orphan in 10 years too. A good reason to stay with boatanchor stuff that you can fix yourself.

Jim

You might try: Vintage Manuals
3300 Wayside Drive
Bartlesville, OK 74006
918 333-7893

for a manual.

The connector you're looking for is for twinax and may be hard to
locate. I had several 390's to which I attached the antenna, via coax,
to a BNC, I think. It's been several years back. I tried the twinax
connection, and didn't notice that much (if any) difference in RX
level. You might try:

Pasternack Enterprises
PO BOx 16759
Irvine, CA 92713-6759
714 261-1920

Page 49 of their Cat #1996 shows some twinax receps, plugs, and
cables.

Also check:

Mouser 800-346-6873. Their Cat# 588 shows a few twinax plugs and
receps.

If you can locate another antenna recep on that beast, try it before you go nuts trying to find the twinax plug! I think you'll be satisfied.

I'm looking for the above mentioned electrolytic cap to restore a
Hallicrafters S-53A receiver. Its an aluminum can (twist tab mounting),
1 3/8" dia, 3" tall.

I know quad section caps at 350 V are rare, so I'll settle for the
one with first three sections.

Also, The measured voltage is only about 250 volts, so perhaps a 300
volt cap would work. What do you think? Thanks.

This is a good idea. The R-390A is probably the most complex tube receiver ever made, and a manual really is necessary when dealing with one. I ordered mine from a fellow called Abe Nutkis in Jersey City. If I find his address, I'll send it to you. The manual you want is the "Field and Depot Maintenance Manual". It is the one geared to troubleshooting and repair.

After you get the manual, be sure to follow the the procedure in it for testing the B+ line for shorts before powering it up. Then turn it upside-down, remove the two big filter capacitors on the AF subchassis (just remove the clamp screw and pull them out of the octal sockets they are plugged into), and re-form them to rated voltage on a current-limited supply. Lastly, give it a good, thorough visual inspection.

If all looks good, it's probably safe to power it up. Connect a 600-ohm speaker to the audio output, turn the power to "on", and plug it in (better yet, plug it into a variac and gradually ramp the voltage on). Reason you want to have it on when plugging it in is that the power switch is easily damaged by over-current situations, and it is impossible to find a new replacement.

The whip antenna uses a type C connector. The balanced antenna input uses a standard twinax connector. Both are still made.

So I hear, too. Someday when I finally get mine fixed (ongoing project), I hope to corroborate this opinion.

Source record: 122260

This unit is gorgeous and has 21 tubes. Twenty of them are 6922's and one OB2WA. It was made for the Navy Department Bureau of Ships. The back has one input and eight outputs. The front panel has a neat DC microamperes test meter with a twelve position rotary switch. Its set up for rack mounting and takes 120 volts to operate. Front panel is a beautiful light gray similar to the R390's. A great unit to hook up several of those boatanchors to. Ready to ship and works great for $150.

I will be away from my Email till Mon. morning or you can post direct to the group which I can access over the weekend.

Message-ID: <01bc2a88$c6fb2d40$475bb5cf@wfairclo.netcom.ca>
Source record: 122261
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

My greatest fears have been realized. I need a replacement electrolytic for my Halli SX-117 receiver.

This capacitor is a can 3"H X 1-3/8D. It is twist mount and the lugs are spaced 1" apart. The hole in the chassis for the capacitor terminals is a 7/8" square hole. Measurements may not be precise due to the rather limited working space.

The (C117) is a 80/80/60 mfd at 250 VDC electrolytic, Hallicrafters part No.
045-000884 and has a manufacturers logo CI followed by the numbers 2406231 which I assume is the manufacturers part number.

If anyone has one or knows where I can get one or have this one refurbished, I would appreciate it.

Thanks for reading.

^^^^^^^^^^^^^^^^^^^^^^

I think NO!
If 250V is the DC voltage on the caps the peak voltage is:
250 X square root(2) = 350V
hope this help.

1881. For Sale: Crystal filters for homebrew projects

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-07 00:00:00 UTC
From: owens@stout.atd.ucar.edu
Message-ID: <5fpc4f$cds@ncar.ucar.edu>
Source record: 122273
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

FOR SALE:
Crystal filters removed from U.S. military aircraft surveillance receiver model: R 902 A/L. These are six-pole crystal filters with a center frequency of 2.2MHz. They are made by Network Sciences of Phoenix, AZ, pn. 2.2-6. They are a nominal 6kHz wide. Actual specs. given below. These are used filters removed from a number of receivers I have parted out. They have some slight surface corrosion, but will clean up well. All have been checked out to make sure they are still good.

Center Frequency: 2.2MHz
nominal BW: 6kHz
no. of poles: 6
3dB BW: 5.3kHz
6dB BW: 7.2kHz
60dB BW: 13.1kHz
shape factor: 1.82
size: 3" long X 1" high X 1" wide
impedance: 3,250 ohms in parallel with 33pF

price: $35each, postpaid in U.S.

also have available a few modules that will convert from the first I.F. frequency of 2.2MHz down to 455kHz. These are part of the same receiver. Built in well shielded aluminum enclosure, these modules have an FET amplifier stage, a crystal osc. and a double-balanced mixer. Will sell for $15 with one of the above filters.

1882. Help: Info on the NC183D

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-07 00:00:00 UTC
From: Mark Mumaw <nu6x@sedona.net>
Message-ID: <01bc2b13$26a8c920$7c50b6c6@nu6x.sedona.net>
Source record: 122274

I have a NC183D that I'm restoring. It is working great on AM but I'm having trouble with it on SSB. In order to receive SSB I turn on the CWO (BFO) but I have to run the RF gain all the way down to 5 or 6 were signals are just barely moving the S-meter. Of course with the RF gain in this position the AVC works very poorly.

Upon inspection with my spectrum analyzer, I have found the CW Osc. signal is 20db below the IF signal at the point were they are mixed (plate of V-8 2nd Det.). I can receive SSB signals only by reducing the RF gain to the point that the IF signal is approxiamately the same level as the CWO (BFO).

I have checked all aspects of the CW Osc circuit and it appears to be functioning properly.

Since the NC183D was built before SSB, I wonder if all NC183D's function this way or do I have a problem with my receiver???

I would greatly appreciate any help or comments.

Thanks Mark NU6X

Im just curious, where might one apply a 6KHz filter? I would think that
BW would be good for AM only. If I were trying to select only one
sideband would this type not be too wide?

Your NC-183D is working exactly like it and its pre-product-detector
brethren are supposed to work. The BFO injection is low, just like you
discovered, but not by mistake -- it was engineered that way.

For both SSB and CW, turn on the BFO, turn the AVC OFF, run the audio
gain high, and control the overall gain of the receiver with the RF gain
control.

Tune in a station, dim the room lights, sit back, and let yourself bask
in the fine audio and great looks of the receiver :-)

George - do you know where I can get more information on this?

i.e. HOW mUCH exposure before it is likely to be a problem etc.??

I dipped my arms in ths stuff to retrieve a pole peg transformer
from its case one time, about 21 years ago, and I have had two of the
symptoms listed ever since then.

For this reason I would urge others to use extreme caution in handling those
beasts, and to use rubber gloves.

It would GREATLY help me to know whether or not that could have been the
cause of my medical problems today. The medical bills have already caused me
considerable distress, and I always wondered what might have caused my
problems. You never know, maybe that one-time exposure affected me!

Some known carcinogens require a lot of exposure before problems develop.
Others don't. Can you suggest any other sources of information?

Please e-mail reply to: bry@mnsinc.com

Thanks

"George Gonzalez" <grg@boombox.micro.umn.edu> whistled a happy tune like:

Source record: 122283

I can't be bothered checking the actual vintage, but when I saw
the model number, I assumed it was from before SSB became common.

That being the case, there is nothing wrong with your receiver. The
way you describe using it, turning down the RF gain with the BFO on,
is exactly the way people were told to use receivers to receive SSB.
They date from a time when the receivers were designed for am/cw use,
and the am detector was used for CW by injecting the BFO signal. There
wasn't a separate detector (and the filter wasn't meant for SSB, either).
YOu have to turn down the RF control so the incoming signal is in proper
ratio to the BFO signal.

My first receiver suffered badly from this. A Hallicrafter's S-120A,
which I bought in 1971 for something like $80 which was a lot for me
at the time. It was about the world's worst shortwave receiver. It
was transistorized, at a time when good transistorized receivers were
really just hitting the market. I"m sure it was worse than a low-end
tube receiver.

Anyway, apart from it's tendency to overload and low selectivity and
lousy dial and tuning mechanism and microphonics and low sensitivity
and undoubtedly bad image rejection, it just did not work on SSB. I
could receive cw signals okay, though the ham bands were such miniscule
sections of the dial that about one turn of the knob got you right through
each ham band. BUt there were these funny signals that sounded like
they were voice but certainly were not receivable. SOmewhere along
the way, I gathered that it was SSB. Even more amazing, somewhere along
the way I grasped that the problem was that the BFO signal was too weak.
At the time, I thought it was because the BFO was not designed to put
out enough signal. I have a vague recollection of trying to build
an external BFO to fix the problem, but with no success. I was
eventually able to receive a handful of SSB signals on the receiver by
putting a pot across the antenna connector, acting like a crude
attenuator (the receiver had no RF control). Of course, by the time
the signals were reduced sufficiently for the BFO to be strong enough,
there were only a handful or signals that got through. I wish I could
remember why I tried the attenuator; I can't remember if I read it
in a book, or figured it out myself. I know that I kept thinking that
the SSB signals were overloading the receiver.

Then, in the spring of 1972, I was lent a Hammarlund SP-600. The
ham bands were still a small portion of the dial, but at least the
dial was oh so much better. Everything worked so much better, it
was just a totally different view of shortwave and amateur radio.
But since the Super Pro did not have a product detector, I still

had to reduce the strength of the incoming signals for the receiver
to be able to properly receive SSB signals. Of course, since the
Super Pro wsa a real receiver, there were lots of signals I could
receive even with the RF gain turned down.

The search goes on......

Late last year when I was searching for an Ocean Hopper,
many of you forwarded leads to me. I've since located
an Ocean Hopper and my nostalgia project is underway.
Thanks to all!

One of you had a lead that surfaced when you visited another
ham in Zero-land (Kansas or Missouri?) for a radio-swap of
your own. (I believe you had driven a few hundred miles to pick
up a vintage receiver or transmitter.) You thought the other ham
might have an Ocean Hopper and you passed the lead along to me.
Although it turned out to be a Space Spanner, I had a nice chat
with the gentleman on the phone about the radio and restorations.
(The other thing I recall was the gentleman in KS/MO had just
upgraded his call.)

Now, I'd like to pass that lead along to a friend who is looking
for a Space Spanner, but I can not find any of my notes re the
original lead.

If this scenario sounds familiar, or if you know of a Space Spanner
out there in the Midwest someplace, please drop me a note and I'll
pass it along into the right hands.

Thanks again for all the help!

That was one of the first things I checked. Fortunately, my 3TF7 is in good healthy shape.

> If you have difficulty locating the ballast tube, replace it with a
> fixed resistor to drop the required voltage. If you are operating the
> receiver from fairly stable commercial power you don't need to worry
> about the heaters in the PTO moving around...

Either that, or just insert a shorting jumper across the appropriate pins of the 3TF7 socket, and replace the 6-volt tubes in series with it with 12-volt versions.

Back on the subject of coax, I went by the surplus store again today, and bought some. They are asking $0.99 a foot for it, or $60 for a 250-foot spool. It is genuine, made-in-USA, Belden teflon-jacketed RG-174 cable.

I bought 10 feet (probably a lifetime supply). I didn't ask if they ship; the name of the store is:
Vetco Electronics
13029 Northup Way
Bellevue, WA 98005
206-869-7025

If they don't ship, I'll be willing to re-sell small quantities to readers of this group for $1.25/foot plus shipping costs. No flaming about profiteering; the markup I'm charging is probably not enough to completely defray the fuel and time costs I'll incur. I realize this stuff can be hard to come by and I'm doing this as a service.

They get their name from being made of pig iron and sit on power poles.
I used them for laser power supplies in the early 1970's. Hooking them
up "backwards" made for a teriffic 0-6000 volt high current supply. We
were tied into a 220V 400A service! Hooking them up "normal" made for
one high current low voltage magnet supply.

Pat,
I just finished a project to check and remove PCB and PCB contaminated transformers (pole type) from our system. PCB (over 500ppm PCB) are usually rare for pole pigs however many old pole pigs DO contain fluid that is "contaminated" (50 to 500 PPM). Transformers with less than 50 ppm are by law considered non-PCB. Many large station transformers (substation) were filled with Pyronol or Askaral which has PCB levels of several hunderd thousand ppm.

Walter, often you can remove the can from the chassis, open up the can
from the bottom, remove the contents and then install a new modern
smaller working unit inside the can, connecting it to the lugs on the
original bottom insulating plate.

Looks the same, works like new.

A standard type "pole pig" used in power line construction would very
likely be mineral oil filled.

Most PCB filled transformers were the indoor liquid filled type or in
padmounted transformers located near buildings.

A friend of mine who refurbished old radios mentioned that when he
can't replace a existing multi-cap like yours he takes the top off,
removes the innards and then puts in a couple of newer electrolytics,
which are smaller and then puts the top back on. It looks like the
original in every respect but has newer caps inside it doing the same
thing... hope this helps.

The Rx is working... There is no product detector for SSB.
Run the AF gain up to 70 or 80% and use the RF' for a "volume" control.

There were out-board boxes in those days, with product detectors and
audio stages to make that vintage Rx play SSB. The magazines were full
of conversions. Today, two ic's do it all. If you really had to, it
would be easy to tap the last IF and go to a two chip box, but the
thing probably drifts more than you want. Keep it stock, then get
a Drake 2B, NC300, SX117 or such, for your next restore.

When I have to replace an electrolytic and want the chassis to appear the same, I unsolder the connections and mount some small modern axial (tubular) electrolytics underneath where they are not visible. The only critical part is make sure you know which leads went where because the polarity MUST be correct (+ and -) or they actually have been known to explode! This is really easy as both the old and new caps are marked. E-mail me if you need a source of electrolytics. Mike

Source record: 122148
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I am looking for either an AC-4 or AC-3 Power supply for a Drake TR-4.

Also, I am trying to put together a class for several techs to upgrade to general. Since we no longer have Heathkits for neophytes to cut their teeth on, I am looking for some Drake TR-4 transceivers for these guys to refurbish. On a scale of 1-10, I guess I would be looking for TR-4's in the 4 to 7+ range. Inexpensive is the word here. If you've got one that's kind of doggy (but not a total junker) or just taking up space and you haven't been too motivated recently to try to sell it, then this might be the time. Even if it's a junker, if we can scrounge spare parts from it, I might be interested. I just don't want burned up or rusted to oblivian hulks. Power supplies to go along with these would be nice, too--we can recap and fix up as long as the transformer isn't burned up.

Please let me know what you have. The closer to Portland, Oregon the better for shipping reasons, but if the price is right....

1928. Help: TMC?? Rack mtg. receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-09 00:00:00 UTC
From: Old Radio Days <radiodaz@ici.net>
Message-ID: <33238099.12A0@ici.net>
Source record: 122149

To all,
I have what I believe is a TMC (Technical Material Corporation) GPR-901RX (MIL #R-840-URR). HOWEVER I cannot be sure?? The front panel name plate has been removed! Only label found was a small sticky foil label on the rear of the chassis that says TMC. Rather than make up a lengthy post, if you are a TMC geru and don't mind e-mailing me I sure would like to get an accurate ID of this 17 tube receiver. It has ham band spread, aux. crystal oscillator and best guess is double conversion. I cannot get a signal past the antenna pre-amp there is a potted loading toroid in the circuit and some of it's taps are open?? I will need a copy of the manual with the schematic to fix it. I am willing to pay $50 for these copies. The receiver appears to be very high quality and well worth the effort.
Thanks!!

Charlie

1929. 390 vs 390A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-09 00:00:00 UTC
From: d888888@juno.com
Message-ID: <387cd$143227.179@news.pclink.com>
Source record: 122216

I'm curious about the performance differences between the 390 and 390A. Do they basically perform equally well? Which is worth more? Are the Collins made ones worth more than the Motorola ones? Any other info will be appriciated. de Bob

A Rare Opportunity ---

SX-88 in superb condition, cosmetically and electrically.
This radio's performance both electrically and mechanically is worthy
of its reputation as the finest Hallicrafters ever produced.

I've turned down an offer of $1,600 as I truly believe this unique
piece to be worth a great deal more. Offers accepted email or phone.

Get a reasonable return of $20,000 to $50,000 by sending only $5. All you skeptics out there, TRY IT. You'll never know it doesn't work unless you do. Its only $5! This worst that could happen is losing that. The best that could happen is getting $50,000!!!

I hate these posts as much as you do. Please just give me a few minutes of your time. It will be worth it, I assure you. For only $5 how can you go wrong? THIS REALLY DOES WORK!!!!
It only cost me the postage and $5. READ ON!
Hello! I've got some awesome news that I think you need to take two minutes to read if you have ever thought "How could I make some serious cash in a hurry???," or been in serious debt, ready to do almost anything to get the money needed to pay off those bill collectors. So grab a snack, a warm cup of coffee, or a glass of your favorite beverage, get comfortable, and listen to this interesting, exciting find!
Let me start by saying that I FINALLY FOUND IT! That's right! I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level marketing, mail-order schemes, envelope stuffing scams, 900 number scams--the list goes on forever. I have tried every darn get rich quick scheme out there over the past 12 years. I somehow got on mailing lists for people looking to make money (more like "desperate stupid people who will try anything for money!"). Well, when I was a teenager, these claims to "get me rich quick" sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days. I thought I could sniff out a scam easily. WAS I WRONG!! I LOVE THE INTERNET!!!
I was scanning thru a newsgroup and saw an article titled GET CASH FAST!! I thought, "Here on the Internet? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS). THAT'S ALL I EVER PAY--EVER!!!
Okay, so maybe the $50,000 in cash was a tough amount to

reach--but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ("snail mail" for you email fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note with the dollar that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, putting my name in position five of the list. This is how the money starts rolling in! I then took this revised article--now with my name on the list--and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW.

I then waited to watch the money come in, prepared to maybe receive about $1,000 to $1,500 in cash or so. But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world--most from the U.S., some from Canada, and even some from Australia! I tell you, THAT WAS EXCITING!!

So, how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!! I now have a brand new black Acura Integra to speak for due to this!! Now after almost eight months, I am ready to do it again!!! Maybe it is possible to get $50,000 in cash--I don't know--but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL!

You must follow through and repost this article everywhere you can think of! The number of postings you make will determine how much cash will arrive in your mailbox!! It's just too easy to pass up!!! Let's review the reasons why you should do this. The only cost factors are the five stamps, the five envelopes and the five one dollar bills that you send out to the listed names by snail mail (U.S. Postal Service mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and enjoy walking (you can run if you like!) down your driveway to your mailbox and scoop up your rewards!!

We all have five dollars to put into such an easy, effortless investment with SPECTACULAR, REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY, EAT AT HOME TONIGHT INSTEAD OF GETTING TAKEOUT FROM McDONALD'S, AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the most detailed, yet straightforward, instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list." Make sure you also include your name and address. This creates a service out of this money-making

system and thus makes it completely legal. You are not just randomly sending a dollar to someone--you are paying one dollar for a legitimate service. I assure you again that this is completely legal!
2. Now fold this sheet of paper around a dollar bill (no checks or money orders). Put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!
3. Now, listen carefully. Here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people. Remove the first name from position 1 and move everyone on the list up one slot. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, position 4 will become 3, position 5 will become 4. Now, put your name, address, zipcode AND COUNTRY in position 5.
4. Now, upload this updated file to as many newsgroups and local bulletin boards' message areas and file sections as possible. Give a catchy description of the file so it gets noticed!! Example: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. The more uploads the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE AND AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type. Leave it as an MS-DOS text file. The best test is to be able to view this file using Microsoft's Notepad or WordPad. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!
5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file. Tell them who your internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for "posting." Place a one-line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like: "Get one million dollars flooding into your mailbox in two days!" You'll never get ANY0 responses!
6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON THE WAY!! Expect

to see a little money start to trickle in around 2 weeks, but AT
ABOUT WEEKS 3 AND 4, THE MONEY STORM WILL HIT
YOUR MAILBOX!! All you have to do is take it out of the mailbox
and try not to scream too loud (outside anyway) when you realize
YOU HIT THE BIG TIME AT LAST!!
7. So, go PAY OFF YOUR BILLS AND DEBTS and then
get that something special you always wanted or buy that special
person in your life (or the one you want in your life) a gift they'll
never forget. ENJOY LIFE!
8. Now when you get low on this money supply, simply
re-activate this file again, reposting it in the old places where
you originally posted and possibly some new places you now know
of. Don't ever lose this file. Always keep a copy within reach for
when you ever need cash. THIS IS AN INCREDIBLE TOOL
THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN
WHEN CASH IS NEEDED!

****
THE NAMES LIST THE NAMES LIST THE NAME LIST
****

HONESTY IS WHAT MAKES THIS PROGRAM SUCCESSFUL.

1. JON VELOFF
8169 KELLYDALE NW
MASSILLON, OH 44646 USA

2. JASON PIORKOWSKI

****

NOTE: Keep a list of everyone that sends you a dollar
(remember, they asked you to add them to your list) and always
keep an eye on the local postings of this file, just to make sure
that everyone is playing the game fairly. You know where your
name should be. AGAIN, HONESTY IS THE BEST THING
WE HAVE GOING FOR US ON THIS PLAN. By the way, if you try
to deceive people by posting the messages with your name in the
list and not sending the money to the people already included, you

will not get much. I know someone who did this and only got about $150 (and that's after two months). Then he sent the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

For replacement capacitors for the old set's, try the following.

Grandpa's Radio Shop
26 Queenston Cresent
Kitchener, Ontario
N2B 2V5

attn. Mr. George Found
(519)576-2570

They have been in business for quite some time, and specialize
in the older radio. They even re-cone the old speakers still.
Something every Radio Shop did a long time ago. They also have
a schematic service.

East Coast Transistor Parts should have both. They are the authorized distributor for Kenwood parts/manuals. You can't buy this stuff direct from Kenwood. They can be reached at 800-328-0388. That's the last number I have listed for them.

1943. T368 owners. INFORMATION REQ.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-09 00:00:00 UTC
From: trouts1@aol.com
Message-ID: <19970309175800.MAA27702@ladder01.news.aol.com>
Source record: 122230

T368 owners,
I have found that some T368 owners have common problems that would seem to be in all rigs. As it turns out other owners do not have the same
problems. A few examples are problems with the vaccum relay for T/R switching on E and F models. Another is a sharp point near the final tank coil which causes arcing which is cured with filing.
I have receintly found out that there were several (if not more) manufactures
of the T3. The problems may be due to design or specification latitude where
manufactures introduces differences or the design may have changed slightly
from order to order. I decided to track some T368's with their order numbers
to see if anything common shows up as common. So I am requesting T3 owners to send me their TYPE, SR #, ORDER # and MANUF. to see what the contract span was and how SR #'s were issued. If you have time please
include what you may have problems with or any other information you may know.
So far I have only been able to locate informaiton about the T3 A,B and C
models. Fair included one E schematic in the A,B and C package they sell.
I would like to purchase manuals for the other models if anyone has them.
I have been told that the Gov't has not released the manuals past the C model.
It may be that there was not manual for the E and F. Thay may have been covered by addendiums or bullitans? If anyone has any information please let me know.
Please send any infomation you have to me at:
trouts1@aol.com and CC
davidk@artax.webo.dg.com
If there is enough enformation to be interesting I will see if ER is interested in
posting it. I will keep a list of people who respond and will send you the
compilation as it develops.
Tkanks

I need a few dial cord pulleys -- they are used to guide
dial cords around corners in radios. Small diameter with
about 1/8" shaft are fine. Prefer metal, put will use plastic
if you have any!!!

Desperately needed for SX-28 restoration..

>other info will be appriciated. de Bob
>
>

I believe the r-390 has LC filtering in the IF, where as
the r-390a has mechanical filters. The LC filtering
will have a wider response, better audio frequency
response, but also less sectivity to filter out unwanted
interference. I would say the r-390a will have higher
value, but not by much.

Source record: 122237

Vintage CW Net:

effective 09III97

7037KHz @ 7:00 PM Central Time on Sundays

This is not a traffic net, your speed is not important. A bona-fide love of boatanchor CW equipment is required, and if you have a vintage rig to put on the air, so much the better!

Crystal control check-ins taken by e-mail or snail-mail. If you are rock bound and wish to join in the fun, send me your frequency & the net will tune to your crystal frequency when it is your turn. Crystal control checkins are WELCOME!

Net Control - "TR" WB6TMY

Mel,

I dont have one, but you might pass a note along to Jim Moore WU3V (jim@usl.edu) and see if he's heard of anything. Jim runs the Packet Cluster down in Abbeville, La. and there's usually messages like that floating along there. Tell him I sent ya, and maybe he'll pass along access to the Net side of his gateway and letcha read the messages on his cluster.

Good luck

1970. FS: Drake TR-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-10 00:00:00 UTC
From: jangus@netcom.com
Message-ID: <jangusE6ty6y.MG6@netcom.com>
Source record: 122162

For Sale: Drake TR-3.

Reasonably intact. I rescued this from a CBer that replaced the IF Mixer crystal with a 27 MHz rock. Go figure. But that says something about the type of abuse this radio has seen. After several hours, (and new crystals from Drake) it appears to be working again. Receives on CW and SSB, and puts out power. AM still has a problem (stuck in transmit). This could be something that was done, i;e;, "added talkback' incorrectly, or perhaps just a service problem with the VOX circuitry.

Includes Remote VFO. Although for some reason the cabinet had been hack-sawed in half. (Shudders at the idea of what were they thinking?)

Also, AC power supply. And Xerox(tm) copy of the manuals from Drake.

Originally purchased for $125 to get an upgraded no-code tech on HF, I haven't the time or patience to finish this. (And I found him another rig he can use.)

I'd like to get $150 for it. (To cover the cost of the crystals.) I know working on boatanchors is for free, so I'm not even thinking of trying to recover the time already spent.

Reasonable offers accepted, and I will pay shipping within the mainland US.

73 es GM from Jeff

1972. FS: OS-8G/U Oscilloscope (New)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-10 00:00:00 UTC
From: "James C. Garland" <4CX250B@MIAVX1.MUOHIO.EDU>
Message-ID: <33241172.72B5@MIAVX1.MUOHIO.EDU>
Source record: 122164

Hi Gang,

Here's an intersting "beginner" level military oscilloscope that I'm offering for sale. (I've filled up the house lately with so much stuff, my XYL has finally reached the limit of her tolerance.) It's an OS-8G/U, made for the U.S. Navy. It's a portable unit, measuring 6.25"Wx8.5"Hx13.75"D (approximately). The oscilloscope itself mounts on a bottom plate with a surrounding gasket, and an aluminum cover sits over the unit to provide a waterproof enclosure with a handle on top. It runs on 105-125VAC, 50-1000Hz, and has 3 inch CRT, mounted so that the face slopes up slightly on the front for easy viewing. The side panels of the oscilloscope come off for easy access to servicing. The unit is solid state (except for the CRT), and appears to be of 1960-1970 vintage. It's a low-frequency single channel scope, and I measured the triggering and sweep frequency response up to 1 MHz, and the deflection amplifiers to 5MHz. It has a nice, clear trace and showed a triangle wave with no distortion. The scope would make an excellent station monitor, an audio or low-frequency servicing instrument, or just a good scope to learn on, but I wouldn't recommend it for r.f. work. It is new and unused. A classy looking little oscilloscope.

Price is $100 plus shipping.

Thanks,

Jim W8ZR

working when purchased a year ago.
Matching watt meter, dummy load - model 650.
Works great on AM with very good signal reports.
Asking $500 for the three.
I can drive to meet half way within reason.
Want to work me on 3885 and hear it on the air?
Why am I selling? Making room for a pair of Collins on AM phone.

More books! Some of these I got a year ago, and they have been in my storage since. In case you are curious, I rarely sell a book unless it is a duplicate of one I already have.

Well, anyway, here is a list of books for sale. This list replaces all former lists. Please do not order from former list that I have posted. Add shipping to price. Shipping in US is $2 for one book, and $3 for 2 or more. Please keep a copy of this for my address at the bottom.

Only successful buyers will be notified.

This antenna coupler is a device which takes a single antenna input
and distributes it to eight output connectors which are then connected
to eight receivers. About 3 db gain is provided by this as I recall
from my unit. About 2 to 30 MHz frequency range.

In shorter terms: It's a slightly amplified 8-way antenna splitter.

Would appreciate any information regarding the Hallicrafters
"Super Defiant", Model SX25. Bought several boat anchors
recently and left this behind in the silent key's basement.
Very, very clean, appears to have all origninal hardware,
with manual dated Aug. 13, 1945, and a letter from Hallicrafters
to the original owner. Is it collectible? Wondering if I
should go back and retrieve it.

I'm not a defender of the BA reseller market. If the transactions could all be kept between original owner as seller and another user as buyer, we'd all be happier with the prices. But, and its a very tenuous but ...

I bought a not so awfully bad condition SP600JX-17. The cost was $250, which was a reasonable price given the condition AND the fact that it had a real live original Hammarlund cabinet. I had the front panel professionally refinished and the cabinet stripped and powder coated. Had to buy a few small items to complete the original radio, including an entire parts set to obtain one tube hold down clip and the little bitty plastic window for the crystal "write-on" area up by the crystal switch.

I completely disassembled the radio, cleaned it throughout, replaced all of the paper tubular caps, several resistors which had drifted high in value (requiring lifting the end of each one to test), lubricated the tuning mechansism, reassembled everything, continued debugging a problem or two, aligned it, and FINALLY, put it on the table to enjoy.

The total money and time invested EASILY exceeded a kBuck. So would I pay that for one up front? I'd think long and hard about it the next time. If you wanted to buy the one I have, you couldn't touch it for under $1000 -- of course, its not for sale anyway.

By the way, I did just that with an R390A -- for a kBuck, I got a beautiful completely and professionally refurbished, ready to play without a glitch, linearity adjusted, endpoints set within 300 Hz radio that is easily the best receiver among many in the shack. And I've never thought twice about whether it was money well spent .. it was.

Last year on one of the "shack" cover photos on CQ Magazine, you can see at the end of the operating bench a 30 Amp plus Variac and next to it a 6ft "California Kilowatt". I'm sure the Variac was keeping the AMP within legal limits:-) Not for busting pile ups. BTW it was not a 6 call. 73

2002. MINI-REVIEW: CPCW-5 xmtr

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-11 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <5g3frd$f8r@news1.mnsinc.com>
Source record: 122183

Someone please copy this mini-review to QRP-L

Here is a "First Impression" of the new CAKE PAN CW-5 transmitter
that arrived today.

It is a new TUBE product on the market for hams! What a great way for
all of those new NO CODE TECHS and other beginners to get their feet
wet with a REAL RADIO!

The radio can be bought assembled or as a kit. It comes with a really
good manual and plenty of helpful instructions. Mine was already
assembled and worked great right out of the box. I was on the air
within 10 minutes.

This CW transmitting device uses a specially designed
tranformer that is made just for this rig, plus a 6C4 - 6AQ5 tube
line-up, plug-in coils and a PI-NET output. There is plenty of room
on the chassis for your own mods or add-ons, and later this month
they will begin offering an AM version of the rig, or a modification
kit to add modulation to existing rigs.

I can see adding a semi-break-in circuit, maybe a relay for keying
from my memory keyer etc, later. For tonight I just used the straight
key.

This rig is destined to become a classic!
Once I figured out which tube went where and got the 6C4 and 6AQ5
tubes plugged in OK, I realized that the OTHER 7 pin tube socket
is for the crystals to plug in! A novel approach. I had seen
something like this done with FT-243 crystals in Octal tube sockets plenty
of times.

I plugged it in and
connected an antenna (G5RV and MFJ-949D tuner) and plugged in the
crystal for 3640 kHz that came with it. No one around so I tried a
CQ. It only has ONE tuning control (plate variable) - the PI-NET has
a fixed cap on the antenna side. No problem getting a full 5 watts
out right away (according the notoriously inaccurate wattmeter used
in tuners of this type) - but certainly in the ballpark of 5-6 watts
out all of the time. The rig tunes nicely and has a good note.

Some RTTY signal is hogging the frequency and I get no replies to my
CQs, so I plug in the 3700 kHz rock and move up the band.

SO at 0042 UTC I put out my first CQ on 3700 and got a reply from
W8TMS in TROY, MI - DX!! AND he gave me RST 599! Not bad for a
maiden viyage on the CPCW-5.

Later on I heard K3JO nearby calling CQ and gave 81 year-old Jules a call. He came right back and chatted with me for 35 enjoyable minutes. My report was RST 579 From Narberth, PA up near Philly using his homebrew 2-tube rig with a 6DQ6 final pumping 25 watts to an end-fed wire.

Later at 0135 UTC I tried a CQ again, and got a call from KR4LE. THe band was
getting noisier now, but Emery got me RST 599 in Richmond, VA

My last QSO of the evening came at 0211 UTC, again on 3700 kHz with KB1MJ up in Dedham, MA running a Heath HW-9 QRP rig. Conditions were awful but Paul and I toughed it out!

I hope to work many of you soon with my delightful new glowbug here! I will be QRV evenings on 3640 and 3700 kHz with the CPCW5 rig from VINTAGE RADIO KIT COMPANY.

If you are interested - contact Carl, WB1EYE who supplies these kits at:

427 N. Main Street
Sharon, MA 02067

or you can read more about it on my web pages at:

http://www.mnsinc.com/bry/hamfiles.htm

I have no financial interest in this company - just a happy user of their product.

Anyone else using one - please contact me via e-mail at:

>
> Does anyone have the value of a Hallicrafters SX-71 and a Hallicrafters

This is one of those really hard to answer questions, because there are so many variables. What's the physical condition? Has the unit been restored/recapped/aligned? Extra holes, correct knobs, etc. etc.? It is ready to roll, or do you need to put another month and $100 into it?

I've seen SX-71's anywhere from $25 in quite poor condition to $300 (which is excessive in my mind) in showroom perfect shape. I'd put one in the $100-150 range if its in really good shape. But as they say, your mileage may vary ... :-)

2005. WANTED: old tube RF linear amps

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-11 00:00:00 UTC
From: svetengr@aol.com
Message-ID: <19970311183201.NAA06443@ladder01.news.aol.com>
Source record: 122186

We need one or more old linear amps for use in developing
modifications using our power tubes.

Preferred would be popular linears of recent or post-1950 manufacture.
They must use tube types 8874, 8875, 8877, 3CX800A or large American
sweep tubes like 6JS6, 6LQ6, 6LF6 etc.
Our budget is not huge, so donations would be greatly appreciated (we
could
swap for some tubes), or we can pay a nominal amount, say $50 plus
shipping.
Corpses are OK, so long as they are repairable--we have plate and filament
transformers. The schematic would be a big help if it is available.

The amps will be modified to accept our types, then articles for QST or CQ
will
be written about the process--the amps will then be sold or donated.
Please help us out--don't trash that old linear!

: Does anyone have the value of a Hallicrafters SX-71 and a Hallicrafters
: HT-40

Dont know about the tx, but I saw a rcvr in fair condition last year
at a flea market for $125 and I think it was too much, as it was in
somewhat less than mint condition. So I'd agree with the other
responses you are getting.
BTW I bought one in 1963 for my novice station for $50.

2008. Help - Heath HW101, low output

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-11 00:00:00 UTC
From: jwg6@cornell.edu
Message-ID: <jwg6-1103971436490001@cu-dialup-1811.cit.cornell.edu>
Source record: 122189

I have a recently reconditioned HW101 trcvr, and have been having fun with it on 40 cw, 15/10 ssb. The other day I hooked it up to an old B&W MATCHMASTER watt/swr meter, and lo and behold the max.output is only 35-45 watts. This is after all the usual loading procedures.

What gives? The rig is supposed to be 180 W input. Don't know how good the two 6146(B?) finals are. (Evidently not up to par.)

Question is, can I keep running the rig like this, fully loaded up to the power level I am seeing, even though it is not "full power?"

Must I replace the finals, or can I keep using it as is? Will operating with diminished-quality, old finals ruin the rig in the meantime?

Thanks for any help with this.

73 all,

Joel Govostes N1AEP

2009. Two Kenwood 2-Meter Handheld Radios f/s

TWO (2) 2-METER 10-MEMORY SYNTHESIZED HANDHELDS FOR SALE

KENWOOD TR-2600 w/lots of accessories for *Very* extended handheld use.

Package includes the following:

2 Kenwood TR-2600 2-m Handhelds
10 memories, scan, odd splits
Touch-tone keypad, direct frequency entry

2 Custom deluxe leather carrying cases w/metal belt clips

6 PB-26 nicad battery packs, varying ages

2 EB-3 6-C cell alkaline battery packs (equivalent to 5000 MAh each)

1 6-AA cell alkaline battery pack (looks like PB-26)

1 SMC-30 Speaker Mike

1 Quick-Charge Base Stand ST-2

2 Standard Kenwood wall chargers for PB-26

2 Rubber duck antennas

1 Original factory manual

The first $325 will take the entire package, and I'll pay for shipping.

Please note that the two handhelds are in perfect operating condition
except that one handheld transmits in simplex only.

In addition, the matching Kenwood Vox Headset HMC-1 is also available.

Feel free to contact me at bashin@calweb.com, or telephone at
916-441-4096.

Thanks,

CES Smart Patch 510SA SIMPLEX AUTOPATCH FOR SALE

This autopatch will enable anyone to convert a radio transciever into a personal telephone autopatch. The Smart Patch connects to your radio's audio, microphone and squelch circuits and listens for you to turn it on remotely via broadcast DTMF (Touch-Tone) tones.

The Smart Patch runs off 12 VDC and is only about 9" x 9" x 1" high. It features powerful programmable options for setting the following:

-- sample window
-- sample rate
-- toll call restrict
-- enabling a personalized ID
-- pulse/tone dialing
-- activity timer
-- timeout length
-- personal access code settings

The simplex autopatch will also operate in
reverse autopatch mode, sending an alarm tone over the air to alert you that someone is calling your telephone line.

Front panel LED displays show connect status, RX, TX and squelch conditions. Also, four front-panel switches allow direct connect, disconntect, power on/off, and toll-restrict enable/disable.

Also included is the original instruction manual.

This unit has served me flawlessly and is in good working condition. Like other CES products, it is beautifully and solidly built. It originally sold in the AES Catalog for $450.00.

Asking $165.

Please contact me either by e-mail at bashin@calweb.com, or telephone after 8 am Pacific Time to: (916) 441-4096.

Thank you!

FOR SALE:
KENWOOD TH-21AT 2-Meter Synthesized Handi-Talkie

This small handheld radio has a built-in Touch-Tone (DTMF) keypad and good crisp audio. Unit has selectable frequency, hi/lo power switch, and +/-/simplex switch. All in one tiny package that's in new condition.

The TH-21AT also comes with these accessories:

-- Extra-life 600Mah battery

-- Alkaline battery insert module

-- Very long duration alkaline (C-cell) battery case

-- Module for connecting TH-21AT to external DC source

-- Rubber duck antenna and belt hook

-- Wall charger

-- Original box and manuals

Asking $150 for the entire package.

Original Kenwood VOX Headset/mic available for an additional $30, if wanted.

Please contact me by e-mail at bashin@calweb.com or telephone me at (916) 441-4096 after 8 am Pacific time.

Thanks,

Source record: 122194

Hello!

Has anyone heard of this box?
US Army Signal Generator TS 155 A/UP
Contains an audio generator, which keys a 2C40 oscillator.
The 2C40 sits inside a cavity that couples to a thermistor power indicator
and a piston attenuator. The size of the cavity and the use of "N"-plugs
suggest a freq. of some 100 Mc.

The good thing: schematic is inside the cover.
The bad: There is at least one part in the cavity missing- no RF out!

Any comments welcome!

bye
Carsten

And all this time, I thought that California Kilowatts were another version of Texas Kilowatts. I'm sure some of the old timers on here remember when because of poor wording in FCC regs, one only had to limit the final in an amplifier to one thousand watts. Of course, if one fed it with 10,000 watts and that got passed through (Cathode follower), one had in effect 10,000 watts legally. That loophole was closed though. Read part 97, and note how things are phrased now. The FCC has learned a few things. de n8blk/3 -art clemons-

Art:

The phrase California Kilowatts came long before Texas kilowatts
but I think Texas KWs came to predominate. ;-)

Someone in the 40's coined this phrase (probably a ham rag) and it
was renowned because many very potent signals came from Calif at the
time. There were two guys according to my memory out here that
predominated in 2
0-80 M. Sorry, I can't recall the call letters for sure but one was
Lawrence Tibbits, a prolific writer for Radio and R9 magazines. There
also was W.W. Smith who ranked among there. Real pioneers in 1-kw,
plate modulate

d high power.

Oh, these were the days of grid-driven amps. No one was aware of grounded grid or cathode followers in those days. BTW, it's g-g where the drive power appears in the plate circuit.

Enough historical comment!

I have the following Heathkits for sale. Conditions as noted. No manuals available. All prices include shipping. Write or call for additional details. Thanks!

HD-19 Phone Patch $40 Nice / Works
HD-20 Crystal Calibrator $25 Nice / Works but battery clip missing
PM-1 Field Strength Meter (RARE) $80 Good but some pitting on front panel
PM-2 Field Strength Meter $25 Will clean up nicely
MR-1134 Marine VHF Scanner $50 Nice / Works
GR-1131 VHF Scanner $50 Nice / Works
HS-24 Speaker $50 Nice / Works
HA-14 KW Kompact Amplifier(RARE) $325 Nice / Works / With AC supply *
B-1 Balun Box $35 Nice
HW-12 80m Singlebander $75 Very Clean! No mic/PS / Status unknown
HW-18 CAP version (dash 1) $80 Nice / Works / With mic / no PS

* the front panel toggle switch has been replaced with one having a long plastic handle. This is any easy fix.

Cheers,

2025. Hallicrafter Logo info needed on old receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-12 00:00:00 UTC
From: w5kft@nts-online.net
Message-ID: <5g77qe$6nk$1@news.nts-online.net>
Source record: 122117

Does anyone have any info on an OLD Hallicrafter SKY BUDDY receiver that has a WINGED Hallicrafter logo on it. The winged logo is very similar to the Colllins winged logo except it has HALLICRAFTERS thru the center of the log. The logo is screen painted onto the front panel of the receiver. No model number on the receiver just the name SKY BUDDY. It is a single round tuning dial on the right side of the front panel. Any info would be appreciated.

Does anyone know of any published articles on the history of the Gonset Communicator series and associated linear amps? This seems to be a neglected area. I amparticularly interested in the chronology, tube line-ups, and interior photos. I do have a few spec sheets from the 1950s. If there are no articles, is there a collector who specializes in them?

On May 3 the Mil Radio Collectors Group will get together at the Camp San Luis Obispo NCO club for their second annual get-together. The site is about 5 miles north of San Luis Obispo CA on US1. The group is a loose knit and quite informal collection of Military Radio fans, users, collectors and restorers. (I fit in there someplace) The meet will have a $2 fee to cover the cost of the site and generate small funds to keep things going. A swap FOR MEET PARTICIPANTS is planned for 0700-0900 with the general meeting to follow. We are also planning a BBQ if we get enough input showing interest. Dave Ragsdale ,who is handleing the facilities part ,suggested about $6 for the BBQ. This is only the second time we've pulled this off so suggestions are welcome. The meeting will have presentations on use and restoration of mil radio gear. You can also bring equipment to display. Last year we had Command sets on line and folks brought gear to share and display. If it is inconvenient to bring somethig for the swap bring a want/trade/sell list to share with folks.
Email me for more info and map if you want to show up. This comes out of my pocket, as have previous mailings, so ask for mailed copies only if you plan to show up. I can also add your name to my email list for an electric head- up on our activities. See ya in San Luis with your Black, Green, or Gray gear, parts and stories.

2032. Re: Help - Heath HW101, low output

Do not take my advise as definitive, but I have heard of many
HW-100's running with old 6146 tubes and know of no special damage
from that usage. If the tubes get gassy, you can screw up the
operation of the radio and (maybe) injure it. On the
other hand, new 6146A's cost about $13 each if you hunt around.

>
> Paul-WA7PXD

Hi Paul-

Last time I checked, AES and Universal Radio both had the plugs in stock. I ordered a few several years ago from one or the other of them and they worked just fine. They weren't Switchcraft but they were just fine anyhow. I'm not sure Switchcraft even still has them in production. Seems like these are built overseas.

Another source is hamfests. I think the PJ-068 or whatever it is that was the original plug used on the Collins S Line transmitters will work fine with the Drakes as well. I bought a bunch of those at the Jackson hamfest last month for only about $3 each, and I spec they can be found at most hamfests.

The plugs can definitely be had though.

I recently bought an L4B amplifier that is missing the filament transformer. I bought a new one (ouch!) but I need info on how to hook it up. I know where to connect the xfmr input leads, but where do the 2 blue leads and the yellow lead connect? I believe one blue connects to the meter board and one to the tie point at D2. Is this correct? Also, there is a blue lead coming from pin 4 on the power/control input connector that is disconnected. Am I correct in thinking that it connects with the green wire from the transformer to the 4-position terminal strip? Also this amp has a history of blowing the filament xfmr after about a months use, this happens while turned on but not being used. Any ideas where the problem may lie? I'll appreciate any help or ideas. Thanks John N0EE

Well, someone bought one at Belton, TX last fall for well over $400, and it was a good deal at that price given its physical condition and the fact that it had been fully restored.

Neither the $50 junker nor the $450 restored price is "normal" for this receiver in typical condition. Nor are the numbers in Chuck Dachis' book. Even if they were two years ago when the book was published (which they weren't) the book is now two years old.

********** More "Odds-N-Ends"for sale **********
Following items for sale or trade. Most items are "vintage radio/
boat anchor" items from the vacuum tube era!! Some prices readjusted
from previous post. I need to move it all out! (To make room for
newer "old" stuff, of course!)

BRITISH "AVO 8" Mk III Multimeter. Very accurate! Works very
well, with resistance range extension unit and instruction/
service manual (copies). Cosmetically VERY nice except for
one hairline crack in meter glass window. (Does not affect
operation!) This is the British "Roll-Royce" version of the
Simpson 260! With additional "Resistance range extension unit"
(Originally cost $95 alone!) BEST OFFER over $125! or TRADE?

EICO 377 Sine/square wave generator. Covers 20 to 200,000 Hz in
4 ranges continously. (Not 'step' tuning) working OK. Case needs paint.
With photocopy of manual. $20 plus shipping/packing.

SIDEBAND ASSOCIATES SBA-312 Commercial Xtal controlled SSB trannsceiver.
With crystals for 2,4,6,8,12, and 16 Mhz channels (Some old simplex
marine frequencies) It runs 100 watts out and is semi-solid state.
(Transmitter uses a pair of 6883B tubes) 115 VAC power supply built in.
No book, no mike. Cosmetically good, a few scuffs, needs to be cleaned
up. Worked OK last time used. (was an 'antenna tuner' test RF source in
the shop I used to work in.) $75 plus shipping.

HALLICRAFTERS HA-1 "TO Keyer". Cosmetically good to excellent. Works
OK. No book.
Best bid over $50 plus shipping

HEWLETT PACKARD 614A and 616A RF Generators. The 614 covers 780-2200
Mhz and the 616A covers 1750-4400 Mhz. The 614A works fine last time
I tried it! The 616A has a bad power transformer (I think) and needs
some tubes (Tubes still in the RF cavities though!) I must get these
out from underfoot! $10 for BOTH to the first person to show up and
pick them up! New Orleans area. I must move these out.

LAMPKIN model 105B Frequency Meter. No documents. Works. Cosmetically
good. $20 plus shipping.

I am open to trades. WHAT HAVE YOU?
Looking for General Radio test equipment,
Hallicrafters: SR-75 transceiver,
SX-71 receiver, S-76 receiver, SX-100 receiver.
McMurdo-Silver 701 transmitter, 1930's receivers,
a pair of 860 tubes, pair of RK-20 tubes, pair of 803 tubes.

BC-221 frequency meter chassis less tubes/crystal otherwise complete and
in
good cosmetic condition.
73,

Sandy, W5TVW
ebjr@worldnet.att.net

> The Hallicrafters book by Chuck Dachis lists the SX-71 for $95 to $145
> and the HT-40 from $30 to $60.

I see a lot of references to the numbers in Dachis' book. Friends of his claim he resisted putting ANY numbers in the book for just this reason. Somehow they seem to take on a life of their own -- as though they are the "real" value. Unfortunately, the publisher apparently refused to publish the book without the price list.

So here we are. Remember that the book is now two years old, and every year it gets older. The info doesn't get stale, but the "price guide" does, even if you believed the numbers to begin with.

Yes, and someone *gave* me a Galaxy GT-550 transceiver in excellent condition. Does that mean that all GT-550's should be given away rather than sold for $xx?

I bought a nice HW-16 transceiver for $25. Does that mean all HW-16's shouldn't be sold for over $25?

Get the idea?

"Out dated"? How does an antenna matching device become outdated?

Greedy? Nah. The typical 275 watt matchbox runs maybe $75.00 Flip through QST and look at the prices of new antenna tuner products. Then tell us what something like the Johnson 275 should be worth on a relative basis. Even $100 is a bargain.

:-)

I know that RCA made an AR-77 and an AR-88. There were also many variations of the AR-88, including the CR-88, CR-91 and SC-88. I am not aware of any variations of the AR-77, but I'd be interested to hear from anyone who knows otherwise.

For a good photo of the AR-88, look at the following URL:

http://chide.bournemouth.ac.uk/museum/reme.annex/rcawsar88.bd4.html

An ad for the AR-77, showing the radio sitting on top of a *huge* speaker, is at the following URL:

http://www.mindspring.com/~johnmb/globe.htm

If you want my opinion, go for the AR-88 or one of its variants. It's a much more substantial receiver and an excellent performer.

See if you have a "Graybar" distributor or someone else who caters to
the telephone industry in your area. That plug (commonly called a
"bantam" plug) is widely used in telephone company central offices.

Or if you have buddy who works at a telephone company CO, impose on
him to find a "surplus" one for you <grin>.

I think the "official" name is PJ-68.

In the past, I've stuck my 275-watt Matchbox on the end of my Viking 500 running what the FCC now allows us AM'ers to run as "full power" (375 watts carrier output or so with 100% modulation=1500 watts p.e.p. output), to an 450-ohm open-wire-fed 135-foot flat top on 3.885MHz with nary a peep. After reading the reviews of todays' commercial choices in antenna tuners in this month's QST, you couldn't pry it loose from me for anything. I just wish I had it's big brother and that they covered 160 meters. Of course, mine has the SWR meter and remote sensing unit, and is a cosmetic 8 or so, so it has some cool BA value to it as well, but by all accounts, it is still the best balanced tuning unit ever produced, and the "low-power" version is very conservatively rated.

A true classic.

With a built-in relay, I might add.

From: Ken Finney <kenneth.c.finney@boeing.com>
Message-ID: <3329C554.18C8@boeing.com>
Source record: 122059

I have an Eico 753 (20/40/80M, AM/SSB/CW) that I picked up at an estate sale a couple of years ago. It sat in a box until a couple of months ago, when I plugged it in and verified that it glowed in the dark. I finally connected a wire antenna to it to see what I could pick up until I get a real antenna. Nothing. Nice background hiss like I would expect, but the hiss doesn't change when I connect the antenna. I realize that with a random wire I shouldn't get much signal, but am I wrong that I should get something? I'm looking for someone who knows these beasts to check it out and tell me what needs fixing and how much. I'd like to find a local person to the Seattle area - this isn't the type of thing that ships well (or cheaply).

Thanks in advance.

I also have one that I purchased for $50. In my opinion there is no 300 watt tuner on the market at any price that can match it. The 275 watt rating was (I believe) for AM operation and I have used mine running 500 W ssb with no problems. It is as classic as it gets. Your Viking 500 sounds great! I had a DX100 with the so called "super modulation" mod that I used for a long time amd an NC-303. Wish I still had them.

BTW Roger, I grew up in Norristown but left in 1978. I visit my father and brother there a lot though. We used to have a real nice group of hams in Norristown (8) hanging on 145.4 AM, 28.5 SSB, and sometimes 3875 AM with the new england guys. I do not think any of them are still in the area though.

>Joe KI3B
(275 WATT!! not 300) Well Joe, here we go! In the past year I bought
one with all the swr sensors, lowpass filter, TR switch, etc for $125
that looked like new, then picked up another that had all the above
and a Johnson TR switch with it for $50. Last bunch was a Viking II
parts set/ hangar Queen and 275 Match Box for $40 not real nice
looking but works. Go figure! I hope folks can buy these common
"out dated" pieces for about $40 each any more than that is pure
greedy speculation. Agree? Any questions?

The problem is these days is if a radio is not in perfect cosmetic condition, its not a good radio. These radios can still be used for their purpose of listening, and dont have to be showroom. They are usually great performers. You dont have to pay some ridiculous price for these units, and hopefully there arent many people that will be crazy enough to have the last dollar squeezed out of them.

Bill

2080. S-38 Questions...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-15 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <5gcua6$p6p@dfw-ixnews11.ix.netcom.com>
Source record: 122073

Hello all.

I have just acquired a Hallicrafters S-38 for my collection. I certainly know of this venerable line of receivers, but can some one tell me more...

It's the plain S-38 version - no B, C, or D. The hammertone black finish is in very good shape, with one small (3/4") patch of bare metal on the top rear. All the knobs are original, as are the red slide switches. All functions work as they should, and it plays and receives quite well.

The power cord even has the little inspection tag still attached, dated January 19, 1949. The dials are in excellent condition as well. And the back cover is also there. The tubes appear to be new, and the chassis is overall very clean. Both the logo and the little metal 'H' plate are like new.

What I'd like to know is what a current value would be? Is this the more collectable of the S-38 series? I don't really plan to sell it, but I'm just curious if this is one of the more unique S-38's or pretty common.

Thanks,

Dave gekko95@ix.netcom.com

George,

Well, hello from your geographic past, I guess. I used to do the 500 into the Junior Matchbox when I was in Conshohocken in 1975 or so (I'm sure you know where that is), but now I use a homebrew T-Match into a loaded shortened dipole for 160/75/40, and the tuner's roller inductor heats up on me with the 500 even when feeding a 1.5:1 VSWR antenna--I should just ditch the tuner, but I like to putter around down band with other lower-power rigs.

There were, as you say, a bunch of AM'ers around here back then. Some are still active (I was off the air for years and years, so we all come and go). My fondest memories are being in high school and running my Ranger and HQ-129X up on 160 meters into a 500-foot end-fed longwire. Why is it that the older you get, the shorter your antennas get? Sounds Freudian to me.

Did you know Milt, WA3MDS, or Moe, WA3MKS? Both locals--Moe had a 32V2 (3?) on 75 from over near the Elmwood Park zoo. Mark, K3VVG and Glenn, K3ZCQ were my local buddies, from my town at the time--King of Prussia. Remember the Schoolboy Net on 40-meter AM at 3 pm each day before the broadcasters came barrelling through?

I could go on and on. Nice to hear from you. You're right, an NC-303 and a DX-100 would be a perfect pair for your nostalgia rig. I wish I had never sold any rigs I have ever owned, but the same goes for cars and guitars.

Roger,

The DX100 came from Moe. and I do not know where Milt (mds) is at the moment. Also had a B&W 5100B and a Ranger II. Moe had a 32V2 (4d32 final I think) and a 2C receiver. The others beside the ones you mentioned were Joe WA3LCB, Lew WA3MIX, Steve WA3PIR, Bill K3ZSG, Tom, WA3DMS and several others whose calls escape me (Bob Griffiths was one of them) Mark and Glenn are familiar names and calls also. I lived just off 202 in East Norriton Twp. My late grandparents (mother) are from Conshohocken. The last time I saw Moe he had a 129X that I almost purchased. Was this one yours?

Never had room for a 500 ft longwire while in Norristown but had a 350 footer when I married and moved to Harleysville. I remember working europe on 75 ssb with a Ten Tec Argonaut with that antenna and the Johnson Matchbox. (Joe and Moe are still in Harleysville I think) I am sure you remember the New England gang on 3880. I do not recall any calls, but the name Tim (tron) still stands out. Hi!

Know what you mean about antennas. I live in a subdivision and have a 38 ft tower, tribanmder and two meter beam plus half slopers for 160 through 30. The rig is now a 726 ICOM about the size of a small shoe box. Bought it for mobile use but had 4 older teenagers in the house for a while and the shack became a bedroom and I had to get rid of the Drake line. All in college or out now and looking for another now that I have rooom again.

Maybe the next time I get back ther I can look you up. I am sure we have worked at some point over the years.

Thanx for the memories

73

Source record: 122000

I have used pole pigs for years, being careful to handle them with elbow-length rubber gloves and goggles and a gas mask. When I am through moving the transformer, I dispose of the gloves, goggles and mask. We stay out of the basement for 48 hours after any such movement. Two of our dogs, who live in the basement now drag their hindquarters around and I am starting to limp. My wife is confined to a wheelchair and our food tastes funny. Other than, no side effects from the PCBs. I saved a lot of money on the transformers.

The NJARC OldRadio Web Page is UP at a new location!

I am sorry for the delay - my old ISP had some major problems and was unable to get globalent.net moved as he promissed. So I now have my own Domain Name [eht.com] and this will not happen again. The new location for OldRadio is:

http://www.eht.com/oldradio

This name [eht.com] is still propigating throughout the Domain Name Servers and it is possible that your Domain Name Server doesn't have this name yet. Please keep trying.

Now as I said two weeks ago:

Re: Marconi Auction = Cancelled & Auction Results @ Havertown

(1) The Marconi Auction was cancelled and it wasn't due to a lack of interest!

(2) The Havertown, PA, Auction Results (Feb. 15)

New (3) A major Estate Auction of a retired ham and collector of over 600 lots will be auctioned in April. You can get the information and Auction Catalog from our new site.

You can read all-about-it on the New! - New Jersey Antique Radio Club Web Page:

I know what you're saying Jeff, and you are right. I just laugh at people that have rough looking radios at swap meets with amazingly high prices on them. I asked a guy last year how much he wanted for a Hallicrafters SX-24 he had. It was dirty, and lifting the lid on it found it to be very rough. I was in shock when he told me the price was $200.!! You get them from time to time liek that.

Take care ..... Bill.

The S-38 is worth more than the S-38A, B, C, etc. The S-38 has both
ANL and variable BFO that is lacking on the other models. I have seen
these units in excellent condition for sale in the $75 to $100 price
range.

Cross-posted to:
rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap,rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Due to overabundance of projects I am selling the following items:

Hallicrafters SX-28. This GC boatanchor receiver is in very good cosmetic condition, and should be in good working condition. The radio worked great the last time I tried it (I put it in storage several years ago and haven't touched it since). There are a few knobs missing and the meter is broken, but the housing is intact and I have a meter that may work as a relacement movement. No tabletop case. This was used at a VA hospital, I believe, based on what is painted inside the top cover. 110/220 transformer. Includes an original (NOT a reproduction) instruction book. $200 plus shipping.

Hallicrafters SX-104. This 30-50MHz boatanchor receiver is in excellent cosmetic condition and good working condition. $75 plus shipping.

Hallicrafters SX-105. This 152-173 MHz boatanchor receiver is also in excellent cosmetic condition and good working condition. $75 plus shipping.

Realistic DX-75. This GC boatanchor receiver is in very good-excellent cosmetic condition and good working condition. Includes an original (NOT a reproduction) instruction book. This is when Radio Shack was still Radio Shack, and not a Tandy division. $50 plus shipping.

Speical deal: Take all four of the above radios for $350, or buy all three Hallicrafters and get the Realistic for free!

Kenwood TR-7500 2m mobile. This radio is in excellent cosmetic condition and good working condition. Includes mounting bracket, a reproduction of the operating manual and an original service manual. Ideal first mobile for the new amateur. $50 plus shipping.

DenTron MT-2000A Antenna Tuner. 3kW PEP antenna tuner. This unit is in good cosmetic and working condition. $100 plus shipping.

These items are for sale only, not for trade. I have to get out of the radio business. If interested, or for more information, email me at twhite@cyberramp.net. Thank you.

Hello Bob,

Sure is a small world, Norristown may have had the highest number of hams per capita in the 60s. hi. I do not think we ever worked as I did not get licensed until very late in 64 but if you were on VHF in the 65 - 67 period, we might have. BTW was the Murch a commercial version of Lew McCoy's Ultimate Transmatch? I remember their advertising, but have never used one. Some of these old transmatch's will probably last forever.

2133. SSB Converter for R390A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-17 00:00:00 UTC
From: "J. Bowers" <bowers@sound.net>
Message-ID: <332DCC1A.4271@sound.net>
Source record: 121897

I am looking for a subject converter. I know of two models that are compatible with the R390A. They are:

CV1759, also known commercially as TMC MSR-9 and the

CV591, also known commercially as TMC MSR-4.

My R390 is doing well but am getting tired of tuning SSB on a receiver designed more for am and cw.

State condition and what you want ($ or trade). If you want to trade, let me know what you are looking for.

Thanks
John

2137. Need help with Ranger 2 problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-17 00:00:00 UTC
From: toneri@ils.net
Message-ID: <5gi9j7$k@nr1.toronto.istar.net>
Source record: 122027

HELP! I need some expert help and advice on a problem with my Johnson Ranger 2.
The VFO does not seem to cut off completely and produces a very rough sounding, wide signal (120 Hz buzz) when not being keyed. Could this be caused by a faulty filter cap in the bisa supply? The bias for the VFO, keyer tube and the modulator comes from a pair of taps on the LV power transformer, to a full wave rectifier (6AL5), and a pair of 15 mfd electrolytics. The question I have for all the fine BA experts out there is: If the bias electrolytics have failed, allowing a high level of AC ripple on the bias voltage, could this be causing the keyer circuit to cause the VFO to be only partially cutoff at the rate of 120 HZ?
I have no equipment for checking the level of ripple on the bias supply and my FET type VTVM is not good for checking electrolytics.
Any ideas or help would be appreciated.

Yes...an unwegulated supply will put 60hz wipple on the bisa as well as
the bias supply which will cause the tube to conduct on +ve peaks. You
should be able to see the wipple on the AC voltage section of the
Meter. It will be several AC volts.

(wegulated & wipple as in wabbit..a most unwegulated Beast! Sorry,
something touched my funny Bone just then!)

> National NCX-5 Transceiver? It replaces the 7360 tube.
>
> Marvin
>

The original NCX-5 used a 7360 beam-switching tube as the
transmit-side balanced modulator. Apparently it was not the
best design as they soon came out with a plug-in mod kit. I think
it had a simple doubly-balanced diode modulator, plus a
tube on top for some extra gain. The mod was a 1.5x1.5x1.5
inch box which plugged right into the 7360 socket. The
old carrier balance control became a carrier injection control.
The module itself had a small carrier balance pot and cap
adjustment.

If you dont have the module the 7360's are still available but
at a low double-digit price.

Hi fellows,

A fellow ham picked up a military VHF power amplifier
and wants to know if it is collectable. The nomenclature is
OA-442/GR and consists of the power amplifier deck AM-494/GR
and power supply deck PP-638/U. He says it is a pair of
4X150s in a class C 140-150 Mhz pp configuration. Built by
Motorola with a 1952 Philly contract date. I told the fellow
I would ask around as if it is not a collectable or usable
anchor he may part it out.

Thanks,

Bob, KE6F

Hello all.

I have just acquired a Hallicrafters HA-1 keyer. It will sit next to my (Heath) DX-40 and HA-5 VFO, and also next to my Hallicrafters SR-150. I am slowly building up a Halli op position. Eventually I will replace the DX-40 with a Hallicrafters rig that would have used the HA-5. The gear is actually up and running, using my SX-133 receiver.

My question: what keyer paddle would have been in common use with the HA-1 keyer? What is a reasonable price to pay for one here in the newsgroups? I'm not after 'collector' stuff. I just want to use something that is fairly accurate historically. The station is in daily use.

Also, what would be a good transmitter to pair with the HA-5?

Thanks for any tips.

Dave gekko95@ix.netcom.com

Jim;

Your e-mail bounced on me. Posting this on news group.

I have a 901 station for sell that is collectors quality "mint condition". Have all manuals/orig boxes/original plastic wrapping and original warranty cards. The FT-901DM is just back from Yaesu checkup and was aligned to factory new specs and has a 30 day Yaesu warranty. Cost me $190.00 for round trip postage and alignment.

Everything is mint condition and works 100% with all boxes/manuals etc.

FV-901DM remote vfo w/40 memories and up dwn scan etc. $130.00
SP-901P speaker/phone patch $ 85.00
FC-902 500 watt ant tuner with power swr meters $150.00
FT-901DM transceiver just back from Yaesu 100% checkup
with Yaesu 30 day warranty. New finals and aligned
to factory orig specs. DM model has AC and
opt DC supply/Ext. cooling fan/am and fm modules $550.00
YD-844A original desk mic $ 70.00
FT-901DM service and parts manuals $ 25.00

All prices plus shipping via post office. I don't want to ship UPS they break too much stuff.

Thanks
Bob

The "correct" paddle to use would be the Vibroplex Vibrokeyer that was painted in the matching Hallicrafters gray. I believe these were done on special order by Harrison Radio and are collector's items.

The "non-collector" alternative would be any Vibrokeyer in decent condition. These are also available new.

I used a Vibroplex paddle with my HA-1 many years ago (when they were still current products). I still use the paddle today. The HA-1 was obviously way before iambic keying, so you can remove any iambic paddle from consideration.

AmSoft announces the 1997 release of "The World of Ham Radio
CD-ROM.
The World of Ham Radio contains the World's largest collection
of amateur radio software, and the most recent FCC amateur radio
license database available anywhere. Track all US and Foreign
Licensees authorized to operate by the FCC. More than 1,000,00
callsigns are found in seconds with this CD-ROM. The current
database includes calls issued up to 14 January 1997. Find hams
by full or partial call sign, prior call sign, last name, first
name, State, City or zip codes. Create your mailing lists or just
print single labels from this FCC Callsign database program.
DOS, Windows 3.x, and *Windows 95 compatible lookups on this
CD-ROM.
Every issue comes with the AmCall auto-logging station logbook
which uses this callsign database. Compatible with most other
amateur radio software packages available today. Also includes
all the "Vanity Flood Gate assignments, plus the missing 3,500
"Vanity Assignment still Available" calls.

There are over 2150 amateur radio modification files included on
this CD-ROM logically arranged by manufacturer, and model number.
That's over 800 new mods since our last issue.

This CD-ROM is non invasive to your drives, this means no hard
drive usage unless you decide to use it.

A Complete user interface "CDVIEW" for the Ham Radio Software
library eliminates the need for you to use DOS commands and
hard drive space. CDVIEW includes Instant online help and
program documentation by pressing the (I) key on your keyboard.
CDVIEW will make it very easy for you to move through and
operate
the massive 20,000+ file compilation. These files could easily fill
822+ Megabytes of space if they were not on this convenient

CD-ROM.
Users can preview new ham software directly on the CD-ROM
without
requiring a hard drive, many of the software programs run directly
from the CD-ROM. You can use the CD-ROM to place files onto
removable diskettes, or to install files onto your computer.

For more information visit: http://hamster.ivey.uwo.ca/~amsoft/
or contact AmSoft direct from the information at the top of this
notice.

hi dave...

as the proud(?) owner (collector?) of 7 ha-1 'to' keyers, i of
course would recommend a vibroplex vibrokeyer... the vibrokeyer
was designed originally for the early tube type non iambic keyers...
in fact, there are a *few* vibrokeyers which were painted at the
vibroplex factory to match the paint on the ha-1 keyers...

i obviously recommend a *new* vibrokeyer, but you can certaintly
find a used one also...

and btw, the first thing i built when i got my ticket in 1963 was
a w9to keyer, and i bought a vibrokeyer to use with it...

73 and good luck...

I have just made a trade for some equipment which includes a COLLINS 30L-1 amplifier. Its in extremely clean condition with new finals. I already have one and don;t need two so this one's for sale. Price is $550.00 plus shipping.

The amplifier is presently in Canada and so if it is purchased by a Canadian amateur there will be no Customs duties or GST. I will personally pack and ship the unit by UPS Canada. Should the purchaser reside in the U.S. I will arrange for shipment from a US point so there will be no Customs problems in this country.

73,

Michael Crestohl, W1RC

Send an email to listproc@theporch.com and only write:

subscribe boatanchors <your name here>

and you'll be hooked up. You'll be given a trial subscription to see
if you like what you see; then later on you'll be asked to submit
$12 (going up to $20/yr in May). You might also want to send another
command line right under the above:

subscribe glowbugs <your name here>

if you're interested in homebrewing using tubes; the Glowbugs guys
are building regen rcvrs and hartley xmtrs and other period rigs
from the 20s and 30s and having a ball on 80 and 40m.

I just picked up the subject tester, minus any manual/charts. It appears to be a bare bones emission tester which will be suitable for what I need it for, but it will be tricky without the manual/charts.

Does anyone have suggestions or ideas on how I can aquire manual/ charts for this beast? Any and all answers will be gratefully appreciated.

Hi, Thanks for reading. I'm looking for the illustration booklet for
the solid state Heathkit scope model io-4540. I have the assembly
manual but a separate booklet the manual refers to as the illustration
booklet contains the schematic and some basic operating instructions.
I'll gladly cover photocopying and mailing costs, or will do the
copying and return the original.

Mike - best bet for a quick check is to place another electrolytic across
the BIAS supply line and see if it goes away.

If it does, then most likely your existing cap has bitten the dust!

toneri@ils.net (Mike Toneri) whistled a happy tune like:

|>HELP! I need some expert help and advice on a problem with my Johnson
|>Ranger 2.
|>The VFO does not seem to cut off completely and produces a very rough
|>sounding, wide signal (120 Hz buzz) when not being keyed. Could this
|>be caused by a faulty filter cap in the bisa supply? The bias for the
|>VFO, keyer tube and the modulator comes from a pair of taps on the LV
|>power transformer, to a full wave rectifier (6AL5), and a pair of 15
|>mfd electrolytics. The question I have for all the fine BA experts out
|>there is: If the bias electrolytics have failed, allowing a high level
|>of AC ripple on the bias voltage, could this be causing the keyer
|>circuit to cause the VFO to be only partially cutoff at the rate of
|>120 HZ?
|>I have no equipment for checking the level of ripple on the bias
|>supply and my FET type VTVM is not good for checking electrolytics.
|>Any ideas or help would be appreciated.

2204. FS/FT: Lettine Radio model 242 (1950s 6m a-m transmitter) PROJECT RIG

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-19 00:00:00 UTC
From: k5dh@dlep1.itg.ti.com
Message-ID: <5gpl3u$blh@sf18.dseg.ti.com>
Source record: 121948
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.homebrew

For sale or trade:

Lettine Radio model 242 six-meter a-m transmitter, 1950s vintage.
Crystal controlled, 6146 PA, plate-modulated by pair of 6V6s.

*** THIS IS A PROJECT RADIO, OTHERWISE KNOWN AS A "FIXER-UPPER" ***

It appears to be complete, although there are no tubes (they tested
bad, so I threw 'em away). The front panel and cabinet are ROUGH
but restorable. The panel will need to be stripped, painted, and
re-lettered. The cabinet will also need to be stripped and painted.
Inside, it's not real bad. The chassis should clean up nicely, and
underneath is surprisingly clean and free of mud-dauber tubes, etc.
Obviously, all of the old rolled paper and electrolytic capacitors
will need to be replaced, and I suspect some resistors will also,
but that's standard procedure when restoring any old rig like this.

This transmitter was found in a barn by a non-ham. It was offered
first to other local hams, who all turned it down. I accepted it
only to keep it from going to the landfill. I figured someone out
there would be willing to restore it and give it a good home.

I honestly have no idea what something like this is worth, so make
me an offer, and please don't be afraid to insult me. I assure you
that I am not "trolling for suckers" to see if I can snag big bucks
on this, 'cuz there ain't no way it would EVER bring big bucks!

I'd be willing to trade it for a fixer-upper novice rig (Heath, Eico,
Drake, Knight, etc), or parts for building "glowbugs" (especially
air variables, B & W 3011 and 3015 coil stock, small milliammeters,
plug-in coil forms and sockets, etc). Whatcha got that I could use?

BTW, the manual is available from W7FG Vintage Manuals for under $10.

73 from the Dallas / Fort Worth area!

Our club, the KCRC, raffled a 2 meter AM transceiver away. It was one
of those classic Gonset Communicatiors. The only problem is who
are you going to communicate with. Operating 6 meter AM even with a
clean signal is going to take full control of channel 2 on all nearby
TVs.
One of our young novices won the set so I warned him NOT to play with
the innards of it when alone because of the high voltages that could
even still be there long after it is unplugged. He was amazed. (better
amazed than dead) You of course would not be surprised that most hams
know very little about hight voltage curcuits. I hope to make a club
project out of restoring the rig. Perhaps you can do that with your
radio in case someone finds a "real treasure". Knowing how to replace
the non-tube items such as the capacitors is an art in itself.

Bry, this sounds like a problem with the VFO. Try changing the
regulator
tube and the vfo oscillator tube. Also, there is an 18K resistor inside
the
vfo compartment that is notorious for failing - the power dissipation
is seriously over the rated capacity of the device. It is best to
remove it and replace it with a larger wattage resistor mounted on a
terminal strip underneath the chassis.

Good luck!

Howdy, small world again! A copy is on the way, good luck with the
set. Mine was in a pile that I bought for $20 and originally thought
of the Senaca as xfmr fodder. It works fine now, though the dila cord
is rather perverted. The manual I have isn't complete but all the
stuff to get the set on line is there. I'll pack it with the Mil
radio info.

For sale: rare military transmitter - BC339 - push/pull 833a's driven by 813 exciter. Rated 1000 watts rtty out, low hours (1750 lbs, 82" tall, 38" wide, 30" deep) - asking $500

I'm posting this for a friend without internet access, Fred Althouse, KE3FV. He can be reached at 717-733-4832, (he is moving next week, 717-581-0498 after the 26th). The transmitter is located in south-eastern Pennsylvania, near Ephrata (turnpike exit 21).

Fred has two of these (he only knows of 3 in existance and he has 2 of them), and I'm fairly certain he ultimately wants to sell both. The second one has been modified for AM.

Hi I have been off the air for a long time but I wanted to set up a cw workstation again so I what I have setup right now is a Eico CW only transmitter and a big green army all bands reciever (someone said it was mobile but I dont believe it) and I rally cannot use the reciever for Ham becasue its just not selective enough. Id like to keep the setup "In period" with tubes and all. Im not real knowledgable on this gear, but what would a good "Boatanchor" amateur only reciever run, and what are some models I might be looking for?

2220. SP-901P speaker/phone patch in new cond

Newsgroup: rec.radio.amateur.boatanchors

MANY guys took their conventional bugs and brought out the dot and dash contacts separately, then tied down the weighted end of the armature so it didn't vibrate, and used it as the paddle (I am one of them, though not with a HA-1). It was an easy conversion, easily reversible, and cost nothing.

Since this was during a time of transition, most guys had the bug available and ready to go. Not iambic, of course - that came along later.

2230. FS: Hammarlund HQ-170A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-20 00:00:00 UTC
From: Dennis Ingebretsen <aeronaut@aquila.wanet.com>
Message-ID: <33314896.4544@aquila.wanet.com>
Source record: 121974

I receintly purchased two boatanchors, but economics and the XYL dictate that one must go. (I'm keeping the Collins).

This HQ-170A is completely original and unmodified as far as I can tell. The front panel is in very goood condition with all knobs and markings fully intact. Plastic dials and S-meter look great. The cabinet is stained on top but has no scratches or dings. Front trim bezel shows wear and has had S/N etched in it.

The inside of the cabinet shows its age, and looks a little "rough" to me.(How do you clean these things?) Again, no signs of attempted restoration or modification.

The unit works very well on all bands I could test (no local signals on 10 meters or 6 meters), and all electrical features appear to function. It's really surprising how well these old receivers work.

This radio is a good candidate for full restoration. At 38 Lbs., I now fully understand the term "Boatanchor".

The first $120.00 + shipping takes it.

From: Dennis Ingebretsen <aeronaut@aquila.wanet.com>
Message-ID: <3331BF06.59AD@aquila.wanet.com>
Source record: 121977

I recently acquired two boatanchor receivers. Economic reality and the XYL have dictated that one must go. (I am keeping the Collins). This Hammarlund HQ-170A is in original un-restored, and un-modified condition. The front panel and knobs are very clean, but the cabinet is stained on top (no scratches or dents though). The front trim bezel shows wear and has had the S/N etched into it.

The chassis shows its age and looks "rough" to me. (I don't know how this is cleaned, so I left it alone).

Electrically, the radio works very good. All functions seem to operate normally, and the unit is very sensitive on 160 through 15 meters. (unable to test 10 and 6 meters with no local signals).

This unit should be a good candidate for restoration with some TLC.

First $120.00 + shipping takes it (located in San Diego)

Kevin - hi, I see these rigs going for anywhere from $150-250
depending on condition, who is selling, whether it is at a hamfest, a dealer
or on the Internet.

If you can find an FTDX400, FTDX401 or FTDX560 series xcvr in REALLY good
condition, you will have a great radio for the money.

It won't have the bells and whistles of todays xcvrs, but I always wnated to
own a 560 just to see what it was like. They look to be well made, and used
a really stout, finely finished cabinet with chrome parts in some places.

Yeasu-Musen Co. known as SOMMERKAMP to our Euro-ham friends, made some of
the best radios in the 1970-1980 era that you could get. I owned a FT101-E
and loved that thing! Wish I still had it!

I made the dumb mistake of trading it for a FT901DM which was an awful
radio; over-priced, and the memories didn't work properly at all.
It was the first Yaesu HF rig with memories, and it would land about 1-2 kHz
AWAY from where it was supposed to when you switched to a memory!

If you see an FTDX-560 going cheap, and not too corroded, let me know!

Bry

"Kevin E. Gray" <may1985@email.clover.net> whistled a happy tune like:

From: "L. Mark Pilant" <pilant@star.enet.dec.com>
Message-ID: <33330C43.1581@star.enet.dec.com>
Source record: 121851

Well, I have a new addition to the BA "family": a Hammarlund HQ-170C. The most pressing issue is to locate a replacement for the "Slot Freq" cap. The one on my new beast has had the vernier shaft sheared off. Anyone know of one for sale?

Also, I'm looking for the manual/schematic as well. Mine is serial number 345, so it is one of the first :-) I checked with Robert Fowle, and this is the one -170 manual he doesn't have. It figures :-)

Does anyone have one they would like to sell (or copy; I'll cover the costs)? (Riders or Sams will also do right now; I'l like to get started without going at it blind.)

Thanks in advance.

The TS-155 was an "S" band (around 2700-2800 MHz) radar test set, if I remember correctly. I'm almost dead certain that they were the jobs we used to tune up the front end of the old SCR-584 auto-tracking radars.

Hi, Gordon,

You are correct that the URC-4 was an aircrew survival radio. They had two switch selectable, preset freqs: 121.5 MHz and 243 MHz, which were the calling and distress freqs in use at the time. The military no longer uses 121.5.

The radios are of late 50s to late 60s vintage and, if it were me, I'd save them if they are in decent shape and unmodified, not scrap them out. The freqs can be changed, BTW, by changing the crystals and retuning the set.

Frank,

EAC was a large equipment supplier to the military. I believe they acquired Hammarlund in the 1960's. Many R390A owners feel the EAC manufactured units are among the best. N5OFF (Tom) maintains contract info. Off the top of my head, I think that order number is from a late 60's run.

Enjoy

Bryan

Hi Joe - I'd recommend a library. Our campus library has radio books that go back to the turn of the century. (I just pray that they never throw out these books "that no one reads anymore." Libraries have been know to do that, judging the value of a book by how often its checked out.)

A friend of mine who had amassed most of the equipment necessary to start a pirate shortwave radio station totaled his car, and has asked me to sell his equipment on the internet. He's asking $200 or he'll take the best offer. The boatanchor is a Heathkit Cheyenne MT-1 transmitter, which comes with the Heathkit HP-13 power supply. He'll also include a 40m RS antenna and trunk mount, a microphone and the jacks to replace the old 4 prong mic jack on the tx, a 12 volt tractor battery and battery charger, and a pair of battery clamp connectors. (He'll also throw in the 1/2 inch socket and can of WD-40 he was using to knock some rust off the tuning drum.) The ps has wire soldered onto the 15 prong jones plug, and if one wanted to use the unit that would have to be removed along with connections made between the battery and the ps and between the ps and the tx. He's handed the equipment to me to sell, and only asked that I give him his money, so you can deal directly with me. He says that if he has to break up the setup he will. The tx and ps he'll sell for $80, the antenna and trunk mount for $60, the battery for $15, the charger for $20 (or $30 for both), the microphone and jacks for $15, and the clamps for $5. Mail moo@midtown.net.

That's exactly what they did. Then MOST of them lost the conducting strips from underneath and tossed the weight(s)...

Key collectors like me believe there's a special place down below reserved for those folks. However, it's relatively cold there compared to the place reserved for the lids that hacksawed their bugs into keyers.

Jerry's comments are both true and well-intentioned, but I personally endorse Rolfe Tessem's solution -- buy a vintage Vibrokeyer, El-Key, FYO (well, those are kinda scarce) or the like.

I have been using this recent ham-fest acquisition after some touchy repair to two of the contact's on the turret and am amazed at the stability and selectivity. Upon first tuning it to a freq in the 11m band and listening for three or four hours without having to re-tune a vacuum tube rig is nothing short of amazing. Even more amazing was finding it still right on freq. the next night when it was first turned on. The only thing left to do now is to try to find a source for the origional tuning knob and the little locking assy. for same. I was told that this radio was also offered as a ham version and i was curious as to the number.I'm thinking of selling it since I already have an early 75A4 and an RCA-AR-88D for swl ing and an old E.H. Scott Phantom Deluxe for DXing on the broadcast band which is a very exciting hobby.

A million? Probably not. Early 1940s prices might give some
clues:

S19R 29.95
S20R 49.95
SX24 69.95
SX25 79.95 or 89.95 (not sure which)

About 45,000 licensed radio amateurs in this period.

Message-ID: <5gtgoc$104m@info4.rus.uni-stuttgart.de>
Source record: 121992

Oh no, there he goes again...
Well, as it happens to be, I found
another piece of eqiupment on a pile of junk.
It's a R 390 A / URR receiver manufactured by a 'Electronic Assistance
Corporation', of which I have never ever heard before. It has been used
by the U.S. Navy, as there is a plaque reading

US Navy Property
62946 - 000902

Two other numbers that might be of interest are the order number:
FR - 36 - 039 - N - 6 - 00189(E)

and the part number: 4 - 0100

The receiver is a 19" rack mount unit with a height of about 8"
and a weight of about 60 pounds.

I appreciate any information on the receiver and the company itself.

Best wishes

Frank Wuest

Message-ID: <n1istE7DDBx.HBG@netcom.com>
Source record: 121995

I have a set of two radios for sale. I don't know much about these BA's, so here's what I have:

Two radios mounted side-by-side on two aluminum angle rails. Each is 4.5"x5.5"x10.5", with a place for a dynamometer (missing) on the rear. One is aluminum-colored, and runs from 3-6 MC, and has no other identifying labels. The other is finished in black wrinkle, is missing the cover over the tubes/coils, and has the following on the tag on the top:

AIRCRAFT RADIO RECEIVER
TYPE CBY-46104
FREQUENCY 1.5-3 MC
WEIGHT 60 LBS SERIAL 1343
A UNIT OF MODEL ARA AIRCRAFT RADIO EQUIPMENT
MANUFACTURED FOR
NAVY DEPARTMENT - BUREAU OF SHIPS
BY
AIRCRAFT RADIO CORPORATION
BOONTON N.J.
CONTRACT NOs-74912 DATE JUNE 29, 1940

(and no, it doesn't weigh 60 pounds...)

I have no idea what it is worth, so please make a reasonable offer, including shipping from Boston (02135).

Thanks and 73.

Hi Gang --

I have a winged emblem 75S-3 for sale -- very nice

Aligned and working beautifully

Would be CCA *excellent* except for one small detail. Someone glued a

label on the panel lower right of bandswitch (probably to remind them
of the freq ranges used in the blank xtal slots.) There is some
nearly clear residue left in an area about one inch square. (I think
they may have used a dymo label.) At a distance of three feet it's
invisible.

Otherwise panel and cabinet are in great shape. Original manual incl.

Hi!

I'm looking for a National HFS or 1-10 receiver--prefer one with all
coils but will consider one with just the upper ranges. (It's time to
annoy the local 2m gang by checking in with at least a BA receiver--these
superregens will demodulate FM sigs, more or less).
Power supply with the receiver would be a plus but lack of one is not
a problem for me.

2285. Reproduction Knobs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-22 00:00:00 UTC
From: pacoboy1@aol.com
Message-ID: <19970322193000.OAA01825@ladder01.news.aol.com>
Source record: 121879

Hello

Need some knobs for my Heath AT-1.I know finding originals will be difficult. Are there any business out there that make reproductions for boatanchor equipment?

Thanks
Ed

2290. FS: TL-922A Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-22 00:00:00 UTC
From: markf@col.hp.com
Message-ID: <5h1nu1$1rt@nonews.col.hp.com>
Source record: 121884

I bought this amplifier from a long-time friend about 5-6 years ago.
It has been in a box most all the time since then (I went inactive
not long after he went inactive).

It has a FEW imperfections on the cabinet, but none on the faceplate.
I have the manual (NOT a copy). I have recently been able to get
back on the air, so it is now being used. I used a variac when I
first powered it up a few weeks ago, so as to protect the HV caps.

The amplifier works perfectly. I know of no problems whatsoever.
Again, I've owned it and used it now over a 5-6 year period.

Reason for selling: I have an SB220 that I've had even longer, and
since I no-longer have a Kenwood xcvr, I'm not interested in that
"integrated" station appearance. Additionally, I'm preparing to
put up a tower, and can apply the funds there.

I am happy to provide a couple of references if you feel better
with that. Any question?

Make an offer --> with these tubes $_______
without tubes $_______

The choice is yours.

-Mark K0EX

2298. FS: VHF/UHF thing

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-23 00:00:00 UTC
From: petef@sprynet.com
Message-ID: <33349bd9.1143311@news.interserv.com>
Source record: 121796

Here's an odd item for the VHF/UHF BA fan. In essence it's a receiver, but actually it's a tuning head for some piece of test equipment.

The input is RF 200 to 400 MHz, and the output's audio. Manufacturer is Molded Insulation Company of Philadelphia, and the nomenclature is TN-327/URM-27.

From the schematic under a sheet of plastic on the side of the unit, looks like 9 tubes, all mini, with a 5876 rf amp, the rest 6BQ7's, 6BJ6, 6AH6 and the like in a standard superhetrodyne receive configuration. The quality of workmanship is superb, with lots of silverplate throughout, BNC connectors, and a multi-gear reduction tuning control with circular frequency dial visible through a window on the front panel.

Could easily be modified into a converter, oscillator, IF strip, etc.

Set is 8.5" X 6" X 13" hwd, not including handle and knob and on the front panel. Weight about fourteen pounds. Set is nice and clean throughout. I have no use for it and haven't tried to power it up - it takes power from the associated equipment.

First $25 takes it. Add shipping if needed from 03060.

73 es tnx

If this is not of interest to you, please accept my apologies for intruding on your newsgroup and ignore this. If this is a pictures newsgroup I will follow this post up with some tasty pics. I hate spammers as much as the next guy, but we're talking about some very easy money to be made !! If you are still interested (and YOU SHOULD BE)......

-!!!-PLEASE READ THIS VERY IMPORTANT NOTICE- NOW!!!
!!! MAKE MONEY-LEGAL AND EASY WITH YOUR VERY OWN MAILING LIST BUSINESS!!!
THIS IS THE FAIREST, MOST HONEST WAY I KNOW OF TO SHARE THE WEALTH!!

Hello! Would you like to make thousands of dollars,quickly, legally, with NO CATCH? Then keep reading.... Please take a few minutes to read this article, and it just may just change your life. I SWEAR I'M NOT LYING TO YOU, ANDTHIS IS NOT A SCAM! If you're interested, please, keep reading. If you're not, then, again, I apologize for wasting your time.

The following concept of making money with your computer essentially began in the US and has now spread throughout the Western World. It is perhaps unique inasmuch as there's no risk - people from all over the world are currently participating and those that follow the initial concept are earning large amounts of cash.
Read the following carefully and you too could be joining the many thousands of Internet users who are currently earning quite reasonable sums of money with a few hours work using their computers via the Internet!
****
This posting has been appearing for quite some time and has now literally got thousands of people actively involved. No doubt like me, you may have seen it before and become a little confused by the way it's been explained. However, I personally have never believed in a so called "Free lunch" and have always worked hard to support my family. But this idea is so simple involving only a modest $5.00 investment that I simply had to try it. At first, it took me quite a while to figure it out - my first impressions led me to believe that there must be some catch to it. But this isn't so, you only have to look at the various postings to realise this; the thousands of postings that are made all carry different names and addresses. So with so many people involved I became convinced that with this particular program I too could benefit. Although many of the postings have been modified the

basic principal remains the same, in my opinion the only problem has been the way the initial concept has been repeatedly changed.
With this in mind I have set out to explain what I consider to be a clearer version, in the hope there is no doubt in people's minds that it's fully understood. Because believe me, this system does work!
****
Essential Information to Assist Your Success!!

These articles have been modified over and over again, and embody over exaggerated claims of vast earnings. While this cannot be disputed it is essential in order to receive the attention of those who read it to post an article that gives out the right signals to the recipient. I believe this article does just that, it's not full of unnecessary $$$ signs, neither does it contain ridiculous claims which only puts people off. If you want to get started right away, simply amend the address section by removing the top location and place your own name and address at the bottom.
****
In general, these postings lead you to believe you can make $50,000 within a month, which I think is a little over the top.
But now after only a few day's of my initial involvement, I'm beginning to get a reasonable and realistic return with a further understanding of just how big this concept is. The money is coming in from all over the world, and sure comes in useful but what's more important is the fact I have proved this to be a totally workable and legitimate system, involving no risk and no major cash outlay.
My other concern was the legal aspect, so I checked this through and was told that providing I mail one dollar to the person I am asking to put me on their mailing list, I am in fact paying for a service. And that service consists of using the Internet to advertise a business.
So what is this business? Well this business is to do with assembling a mailing list of people who are interested in working from home using their computers to generate an income.
****
Ok...if your interested there are three basic steps: All of which are pretty simple. Think positive, after all, the people below became involved just like you!

Let me tell you how AND WHY this works .. also, MAKE SURE YOU PRINT A COPY OF THIS ARTICLE NOW, so you can get the information off it as you need it.

STEP 1:
Get 5 seperate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." (In this way you are not just sending a dollar bill to someone, you are paying for a legitimate service.) Fold a $1 bill inside each piece of paper with your name and address on it, and mail these 5 letters to the following 5 addresses:

1- SRO Services
PO Box 909
Puunene, HI 96784
USA

2- Aumakua Enterprises
PO Box 277-316
Kihei, HI 96753
USA

3- Ross McCrindle
2-28 Cambridge St. S.,
Lindsay,Ontario
K9V 3B6
Canada

4- Sean Ringle
PO Box 1
Lanesville, IN 47136
USA

5- Ron Campbell
106-1309 West 14th Avenue
Vancouver BC V6H 1R2
Canada

STEP 2:
Now take the #1 name off of the list that you see below, move the other 4 names up. (5 becomes 4, etc.) and add your own name as number 5 on the list.

STEP 3:
Change anything you wish to, but try keep this article as close to original as possible. Now, Post your amended article to at least 200 newsgroups. (there are around 19,000 groups). All you NEED is 200, but remember, the MORE YOU POST , THE MORE MONEY YOU MAKE!!!

You are now in the mailing list business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a pseudonym, but make sure address is correct.

LEGAL ???

People have thoroughly discussed whether this is really legal. You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and online businesses and methods of generating income at home.
REMEMBER - people send you small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to you.

HERE IS WHY THE SYSTEM WORKS:

The internet is growing at a tremendous rate - it doubles in size every 4 months. Think about it. You see those "Make Money Fast" posts more and more. All that growth means potentially big profits for everyone who participates.

Of every 200 posts you make, you should receive roughly 5 responses. That probably doesn't seem like much. You make $5.00 for every 200 posts with your name at #5.

Each person who sent you $1.00 now also makes 200 additional postings with your name at #4. i.e. 1000 postings. On average, 50 people will send you $1.00 with your name at #4. That's $50.00

Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people=$500.00. They make 200 postings each with your name at #2=100,000 postings=5000 returns at $1.00 each=$5,000.

Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES ONLY 200 POSTINGS! Potential income in one cycle = $50,000.

REMEMBER THIS ---- thousands of people all over the world are joining the internet every day and reading these articles every day just like you are now. So can you afford $5 dollars and see if it really works??? I think so.....

Lets review why you should do this. THE ONLY COST IS $5.00, 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5.00 for such an effortless investment with such SPECTACULAR RETURNS.

There are millions of internet users, and millions of new net surfers every month. REMEMBER - read the instructions carefully, and play fairly. THAT'S the only way this will work. Get a printout so you can refer back to this article easily.

Keep a list of everyone that sends you money, keep good books, pay your taxes, and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER - HONESTY IS THE BEST POLICY. WHAT IS $5.00 TO YOU? YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $50.00 or $5,000.00?? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY

True enough. Personally, I have never understood the big deal about iambic keying -- at least at speeds up to 35wpm or so, which covers just about all amateur operations. I have two HA-1's which I use with vintage equipment.

Model DK-3 2.5 meter (112 to 116 mc) transceiver made by Abbot Instrument, 51 Vesey St. New York City. Two tubes, super regen receiver, 11 pounds, portable operation with three 45 volt batteries and 4 1.5 volt, fixed from outboard supply not included 6G6G and 6J5GT tubes. Sold by Henry Radio Butler Mo. for $29.95 less tubes and less usual discount to amateurs. Includes manual but no schematic, fair condition, leather handle missing and 34" home brew dipole antenna. Size 11" x 11" x 4.5" grey wrinkle finish. Appears complete, no extra holes, all original knobs, but I haven't powered it and won't. Manual states "fine performance is due to very careful mechanical and electrical design.... a completely self contained ultra high freqency radio-telephone transmitter or receiver, by simply trunig the switch. Does anyone remember these things? It's the only one I've ever seen. Will trade or sell for best offer. leave email 73 Hank wd5jfr

Contact Raph Coe at Midstate Electronics in Bryan, Texas - phone number not handy at moment. Ralph bought a 100 footer trailer mounted from the Texas A&M University junk auctions that was a crank up version. It is in rough looking shape, but could be re-worked, I think.

The research crew used it for elevated camera work in high density traffic counts at large intersections. It hasn't been used for years but is exactly what you say you want.

The first thing Drake would do is take out the Sherwood mods before doing repair/alignment (and they'd be removing them at their hourly labor rate). I suggest you look elsewhere first.

Real nice and working perfectly. I'd give it a 9.5. The only reason its not a 10 is for 3 or 4 very small paint scratches on the side of the cabinet. Original manual and schematics included. $125.00 (US) plus shipping.

Thanks for reading.

It's like most carcinogenic substances: some people can bathe in them and
live to be 120 but others will get metastatic cancer and die a horrible
death
from a single exposure. It's genetically related, your susceptability.
The
problem is, you don't know which group you belong to.

2324. FS: Hammarlund HQ-110 manual *copy*

There is one at my school, a fellow teacher said he wants to solid-state it.
It was working when it got put in storage, so if the power supply is on this
big 2 x 3 foot board it should still have it. I'll ask to see if I could take this
transformer for you, as if we (ever) solid-state this thing we won't need it...

But where are you? We are in Montreal, Canada.

I would like to buy a manual (or copy of manual) for a E.F. Johnson ADVENTURER transmitter. Please e-mail cost. I am in zip code 39440 for ahipping purposes. Larry, WB5KYK (the qrp man)

2344. WANTED: plug-in coil forms and sockets

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-24 00:00:00 UTC
From: k5dh@dlep1.itg.ti.com
Message-ID: <5h6bli$b32@sf18.dseg.ti.com>
Source record: 121750
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I need at least two each of the old plug-in coil forms and sockets for a CW transmitter project I'm working on (a 6V6 oscillator driving an 807 PA). Either 4-pin or 5-pin types would be fine, about 1-1/4" in diameter or close to that.

I could also use a couple of Millen ceramic plug-bars and jack-bars for my parts stock (future projects, y'know?).

ALSO... I need some B & W 3011 and 3015 coils (unused only, please) for transmitter projects.

73 de K5DH! :)

2345. Mystery RT-1-B transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-24 00:00:00 UTC
From: nick@cs.unc.edu
Message-ID: <5h6e5e$66@altair.cs.unc.edu>
Source record: 121751

I'm looking for any info on a mystery transmitter I acquired at
a recent hamfest - I know it isn't a mystery to someone out there!

Model RT-1-B Radio Transmitter.
3-30 Mc crystal controlled CW transmitter - 1950 vintage
presumably for some clandestine service?
"Fungicidal coating applied March 1950"
no manufacturer's name anywhere on it.
presumably US made given tube types and Aerovox caps

9" x 9" front panel, 13" deep
grey aluminum enclosure - has a handle on top
flip up front cover fastens with 2 Dzus fasteners -
separate power supply - via rear Cinch-Jones and HV connections
Antenna connections on rear, VFO (SO-239) on one side,
relay/receiver connections on other

inside of flip-up front cover has laminated tuneup instructions.
Inside of bottom cover has laminated schematic
no manufacturer's name anywhere

4-65 final, 2E26 driver, 6AC7 oscillator, 6Y6? clamp, VR-150
very sturdy construction - all tubes clamped in place.
separate ceramic coil forms for each band for osc, driver, and final
beautifully made rig with handsome black front panel

Any clues ?

73 & Have Fun,
Nick KD4CPL

YOU DON'T NEED TO BE A SCOUT OR LEADER TO EARN THE ScoutElmer AWARD!!!
ScoutElmer Award for helping Scouts become ham ops

WHO QUALIFIES FOR THE AWARD?
1. Licensed ham op (any level)
2. Scout or Adult Leader (past or present) or...
3. Any ham that know someone (Scout or leader) currently active in a Scout unit.

WHAT IS REQUIRED FOR THE AWARD?
1. Agree to respond to Scouts via email with their questions about ham
radio in your local area, for 1 month.

HOW DO I SIGN-UP FOR THE AWARD?
Email to the address below and fill in the blanks.... that's it!
1. Name & Ham Call Sign:

2. Email address:

3. Locations: (ie London, UK; Los Angeles, CA, USA; etc)

4. What do you want to do: (email only; email & phone; email, phone & ham class)

5. Your Scout affiliation & position (enter past affiliation and date if
applies):
(If no current or past affiliation) Your Scout or Scout leader sponsor:

6. Optional comments for your ScoutElmer listing: (ie. ARC Club listing,
Explorer post, Troop etc.)

WHAT DO I GET?
ScoutElmer Award recipients will receive special award logo graphic you can
add to your website. You also get a certificate (suitable for framing).
Lastly the satisfaction that you helped promote amateur radio in Scouting.

If you've already applied for the award, sorry for the email. You should
receive confirmation in the next few days.

```
-------------------------------------------
For Sale: Collins 75S-3C Receiver w/Filter
-------------------------------------------

Winged Emblem

Serial #11711

Includes 800 Hz CW filter

Plays great

CCA Very Good to Excellent

Front panel virtually perfect. No blemishes.
Knobs have minute scratches on outside (cylinder
portion). Cabinet shows tiny bit of paint wear
by finger hole on top. Fanatics will want to
clean chassis better than I did.

Manual is original round-emblem. It has been 3-hole
punched, and someone wrote "201 filter in this set" in
ink on the cover. It also needs to be re-stapled (your
next trip to Kinkos!).

I'll take best offer on this radio. I won't "get back"
with anyone on the offer to beat. Just tell me what the
radio is worth to you in your first correspondence, and
I'll let you know if you own it. If you do not ultimately
hear from me, your's was not the best offer.

I normally price my equipment for sale when I feel
comfortable with market values. These receivers are rare
enough to make that infeasible. Thank you for your
understanding.

2356. need help with Hammarlund HQ100

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-24 00:00:00 UTC
From: andywilliams@worldnet.att.net
Message-ID: <andywilliams-ya02408000R2403971940360001@netnews.worldnet.att.net>
Source record: 121762

I have a Hammarlund HQ100 that has 2 problems. First, it intermittently breaks into oscillation between 12 and 14 MHz. The oscillation can be controlled somewhat by the antenna trimmer. I realigned the the receiver and resoldered the shields and grounds on the tube sockets to no avail. The other problem is that the antenna trimmer capacitor shaft is slightly slanted. The slant is just enough to short out the plates in some positions. The slant appears to be caused by the pulley and dial cord from the front panel.

Does anyone know what the fix is for these problems? Maybe in a Hammarlund service note?

Anything 40's to 50's vintage with tubes I guess.
My first ham setup was an ART-13 with a Hammurland HQ-180C reciever.
Worked a lot of CW in the 70's with that & my (then) General license.
I was only about 15 years old at the time.

This radio is also known as the Hallicrafters SX-73.
I've got the R-274 version too. Great radio however I still prefer my
R-390a for DXing. The R-274 (SX-73) is good for general SWLing
though. Tunes broadcast band to about 60 MC.
Made sometime in the middle 50's.

2370. WTB: Military R-648/ARR41 & AN/GRR5

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-24 00:00:00 UTC
From: tubsc@aol.com
Message-ID: <19970324032801.WAA10047@ladder01.news.aol.com>
Source record: 121841

Hello,
Im looking for two military HF radios.
1. R-648/ARR41 tube receiver with 5 digit digital readout

2. AN/GRR5 field HF radio set (radio & power supply)

Any help would be greatly appreciated.
Thanks,
Chris (TubsC@aol.com)

I had few inquiries on this before, but lost the E-mail!

Forsale: Hallicrafter S20R. Good condition; recapped, aligned
and plays great.

Asking $100.00 firm.

Source record: 121843

Forgot to mention, besides being restored, the S20R rating,
according to the CCA rating system, is a "GOOD" condition!

Asking $100.00 firm, reason for selling is I have a new SX28 to
restore, and a Hallicrafter SX42 that I am also fixing up.
No more room left.

Pete

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a box full of various and sundry coils and inductors that I really am not going to need......these should be of interest to anyone who is into vintage equipment as opposed to newer solid-state stuff.

There are 40 pieces included - everything from a couple of IF cans to plate chokes, wound coils, some on plug-in forms, etc. I figure a buck a coil is pretty fair. Most are used but some are new in the box.

Actual Postage/UPS charges extra. No "handling" fees.

If interested please reply by e-mail.

2375. Can somebody recalibrate my Hallicrafters S40?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-25 00:00:00 UTC
From: moo@_NOSPAM_.midtown.net
Message-ID: <moo-2503972039130001@sl4.midtown.net>
Source record: 121696

My Hallicrafters S40 has been sitting unused on a shelf for a long time because I can't find somebody to recalibrate it. Apparently when the dial string was replaced in the early 90s, the dial was miscalibrated so it's as much as -350kHz off in some places. When I took it down to reuse it five months ago I found that the calibration was off, but I don't know of anybody who can fix it. I'd like to find somebody in northern California or western Nevada who can do this. Thanks.

2376. Save a Heathkit HS-1661

Hi folks:
I have a good condx HS 1661 speaker (matches HR-1680 rx and HW series transceivers). No logo. I am putting together a nice GPR-90 rx into a Premiere POR-8 cabinet and would like to refinish the speaker in charcoal grey. But out of deference to you Heathkit aficiandos out there, I won't do that until some who needs the speaker can put a replacement BA speaker in its stead. Any suggestions before I apply the sandpaper to the Heathkit blue? Cal, N6KYR.

Source record: 121702

I have a Heathkit HD-20 100KC crystal calibrator (the little box with the binder post on top and switch on the front). It takes a C-size battery with clip-on posts on each end (these posts are the same as the ones on a standard 9-volt battery). Can anyone help me identify this battery or at least tell me the necessary voltage?

Thanks very much.

You don't -- it's strictly a transmitter. (Well, I guess you _could_
hook a 50-ohm speaker up to the antenna connector, if the speaker
had really good high-frequency response... :-)

Good Morning to everyone on the UCSD list.

I am searching for the following items and would
appreciatre a lead from anyone on same:

Radio-Teletype stuff, particularly crypto converter parts
pass through tape converters, etc. Model 28 is
preference.
Hallicrafters P26 power supply
Heath HA30 6mtr linear
Heath HO13 monitor scope
....and last but not least, an internally sound SB220
amp. Cosmetics can suffer but unit should be
electrically ready to go or close.

Free to good home of licensee: Heath DX60. Shipping
extra.

73 to all,

Doug W5JV

Source record: 121775

I have a Johnson Valiant I which needs a new home. I was in process of restoration but too many irons in fire -- it's just not gonna get done. It has some wiring changes but all appears in place to restore. Front panel cosmetics good. Case needs repainting and has some holes on side which I think are not original. Some tubes but needs most. Rectifiers converted to solid state under chassis -- again part of "rewiring". If not for restoration, good for parts unit as all major components appear to be in place. Obviously considering weight, prefer not to ship. Would take to Belton hamfest to meet buyer. Presently located in DFW area.
Make an offer.
Bob W5TX

Hello,

I have a very nice WWII Low frequency receiver covering 200kcs to 2mcs. It is stamped accepted by USN 10-15-43 and is marked CAY 46076 and also RBM-4. It has an interesting original small window compartment on face panel that reveals scrolled paper for writing frequencies of interest and storing them. The receiver is in excellent all original physical and electrical condition. I used it to log beacons. Requires power supply.

Best offer. I can be reached at 810-332-5429 after 6pm EST.

Thanks,

Peter N8EVJ

2396. F/S: Bench tube type power supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-25 00:00:00 UTC
From: James Parsons <k5rov1@worldnet.att.net>
Message-ID: <33381A58.445F@worldnet.att.net>
Source record: 121782

I have for sale a power supply that was made for testing tube type equipment. It appears to be commerially made, but I don't know by whom. The case is the size of an SP-600 case, with chrome on the top and bottom. It has two variactors on the front panel, with a meter besides each. One meter reads 0-500 volts, the other reads 0-50 volts. On the bottom of the front panel is a line of terminals. they are labelled:

0-110 AC
6.3 VAC
0-50 volts bias
105v regulated
195v regulated
0-350 volts DC

The unit has VR tubes in it. It is too heavy for me to ship, but if anyone lives within a few hundred miles of San Angelo, TX, I could drive about a hundred miles to meet you. I am asking 125 dollars for it. The case, variactors and meters are worth that much. I used to use this when I was building tube receivers and small tube type transmitters. However, it has not been turned on for about 20 years.

I have a Measurements Corporation Megacycle Meter, Model 59, complete with coils and the original manual. The manual says it is a grid dip meter, a variable frequency oscillator, an absorption wavemeter, an oscillating detector and a tuned circuit absorption detector. The frequency range is 2.2 mhz to 400 mhz with seven plug in coils. The modulation is CW or 120 cycles fixed at approximately 30 percent or external. It uses one type 955 oscillator tube, one vr-150/30 regulator, and one 5Y3GT rectifier.I have not used it in about 20 years. I would take an offer on it, or trade for qrp gear.

YEOW!!! I wish I could find another one of these in a junk pile,
Frank! I have one too made by the same contract manufacturer plus an
older R390 made by Collins Radio.

For some preliminary info check out this website and go down to the
R390A listing after the page loads (it is a large load):

http://telalink.net/~badger/millist/index.html

Or, if you cannot wait, go directly to this page and move down through
the text until you find the R390A:

http://telalink.net/~badger/millist/m11.html#a2109

In 1950 Collins Radio Company was the original designer and first to
manufacture the original R390. This webpage will give you an idea of
when yours was manufactured plus some technical information.

On the first part of the main index page I gave you you will find a link which will take you to some other Collins Radio-specific sites but you may find even more R390A bits of info in them.

Good luck with it and have fun listening (after you get it working if it needs fixing).

Need help identifying this speaker.

It is a National
Gray in color
Looks like the Later HRO speaker but:
Cone is only about 5" dia. Yes, it's original
Cabinet is about 12" square

I've searched through old QST's but National didn't advertise their
speakers much. I suspect maybe it may match the NC-188 but I'm not sure.

If anyone has any suggestions or questions, please drop me a line at

In Canada they go for $40 to $75 CDN. There are a few interesting ones up here with seven band ranges and an extra capacitor in the top left hand corner. They tune from 2-30 Mhz and with little modification, work well on 160 metres. Same price, sometimes less because the people that get them don't know enopugh to short out the contacts on the antenna relay and they think the matchbox is broken, hi! 73. Harry, VE3GRO

This sounds like about 1948 vintage.
I just read an article in a 1948 Radio-Craft about such a beast.
It could be the same thing.

Sure would be nice if I lived close enough to pick it up, but California is a bit
of a stretch.

Hey guys - I wanted to let you all know that I have found a really
great web site for homebrew articles and projects on-line
that I think many of us do not know about!

It is a branch of the G3YCC QRP page in England that has
SM0VPO's projects:

http://www.gqrpclub.demon.co.uk/sm0vpo_1.html

Give it a try. There are numerous tube and transistor transmitters
and receivers shown there. Really great!

I hope you find it interesting as I did!

BC-645* IFF Set, 435-500 MHz, 316A in xmtr,
P/O SCR-515, like Navy ABA.

Army version, WW-II era "Identification, Friend or Foe" unit.
Transmitted a coded pulse to other aircraft to identify as friendly.
Historically significant, but no use for ham-radio.
Suggest donation to Confederate Air Force or similar.
You can perhaps take a tax write-off.

2430. Boatanchor Speaker Project

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-26 00:00:00 UTC
From: nick@cs.unc.edu
Message-ID: <5hbfsp$4lo@altair.cs.unc.edu>
Source record: 121724

I have started making a list of boatanchor speakers and their matching receivers. I'd really appreciate corrections and additions and particularly scanned photos of vintage communication receiver speakers so I can turn this into a decent WWW page.

The list is at:
http://www.cs.unc.edu/~nick/speakers.txt

Many thanks,
Nick KD4CPL

Another odd thing I noticed. That listserver wanted a confermation (by replying to a message it sent) to complete the subscription process. Seems to be low traffic at the moment (99 members) but that may change...

Any 9Volt battery...it wont last as long....but it will work! I built
one many moons ago....Oh Dear I have got old!!!!! And it is still with
me as a museum piece on my shelf!!!

Not really odd, about half of the mailing lists I have seen, have the
confirmation
response turned on. Just a method used to insure that you are the person
subscribing
and not someone else subsscribing in your name.

Hello Gang:

Cleaning out the cellar is addictive . . . the more I look the more I find that I realize I don't need.

This time I have a big shoebox full of assorted parts, switches, tube sockets & shields, capacitors, etc. Don't know what all else.......

I figure its well worth $10.00 plus shipping......but not to the West Coast.

If interested please reply by e-mail.

It is -- put together by someone who feels they have a cross to burn ...

or who wants to be seen as a hero of some sort amongst the faction who spent their only available $12.00 on a couple of six packs. The whole idea is ill advised and just dilutes the level of support and knowledge that would be available in one list with focused expertise and experience. Of course, there are people subscribing by the bezillions, but people would subscribe to lists on bologna and cheese sandwiches at an even higher rate. The possession of an internet ID and mail account is no guarantee of IQ .... Franky, having to subscirbe to 40 lists, each with the same basic members, but each focusing on narrow discussions of one manufacturer or whatever to get the breatdth of BA discussion is useless. Maybe I should start a list devoted to Hammarlund equipment manufactured between 8:02am and 9:22am on March 22, 1956 ?
Its all an ego trip of major proportions ...

;-)

Grant

I've a pal that wants to liquidate both

I can't believe the HFS was a SigCorps contract, but it was. There's
a 5886 doghouse PS too.

Also there's a SW3 look-alike in the deal. Plugs into 5886 too.
Has VHF coils & lo cap variable but o'wise is a SW3. A custom
built or production??

Thanks for reading,

Marty

Message-ID: <333A656D.5F32@worldnet.att.net>
Source record: 121651

Hi all - Robert's on a business trip, so I'm re-listing this radio on his behalf...The gentleman who agreed to buy the radio has since dropped out of sight, not responding to E-mail etc...so I assuming he's changed his mind.

The radio is in excellent condition (number B6249) - and is about a 8 1/2 to 9 on the scale. Some paint chips around the bottom of the case, but no serious dents or dings anywhere. Very clean inside and out. Faceplate is great, with clean white dials and no knobs missing. All controls appear to work with no problem. Very nice unit. Price is $200.

Prefer local pickup in St. Louis area (I'm partially disabled), but if it must be shipped, you pay shipping (UPS pick-up). Serious inquiries only via E-mail.

Thanks.

John

2456. Heathkit Tube Testers-Statement of Line?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-27 00:00:00 UTC
From: Rob Frans <fransr@iserv.net>
Message-ID: <01bc3a80$06f9f280$dcbcb1cc@default>
Source record: 121653

Is there anyone who is knowledgeable in Heathkit Tube Testers in regards to Heath's Statement of line...? What I am looking for is what models they came out with over the course of their tube tester production and the basic features of the major model series... I don't have any Heathkit catalogs (although willing to buy some from someone willing to part...!) so I can't check on what used to be available... Finally, I would love some info on the TT-1 Mutual Conductance Tube Tester... esp. the years produced.

Thanks in advance!
Rob Frans

I remember this unit. Had a hunk of dielectric that, upon electronic
command of some sort, thinked down between the tank circuit lines to change
the frequency.

There was a brochure on converting it to ham use, but that was in the
modulated oscillator days.

>73
>John WA6QPL

Seems darn-near anything is cacinogenic in large enough concentrations. The problem with PCB's is that they don't break down. They hang around forever becoming more and more concentrated in our environment.

17 years ago I worked for GE at a plant that rebuilt transformers, motors, generators and about anything else. We used to reach right into the transformers through the oil and pull the guts out... never thought anything of it. Then we had a big tank of trichloroethane that we'd wash the pcb-laden oil off of our hands and arms in... never thought anything of that either. The tri-chlor goes right through your skin and into your bloodstream. You can taste it in your mouth. Now we're much smarter... you just never know, but it CAN"T be good for you.

I've not heard of any of my old co-workers having problems... yet. But I think it's prudent not to have this stuff around the house. Working with it because you have to is one thing but why play with it for fun?

If you want to play with pole-pigs flush the PCBs out of 'em. You won't get it all out... not by a long shot, but you can reduce the concentration.

I don't know how you'd get rid of the old oil. Best sort that one out before you aquire the pig. Take it to a hasardous incinerator, or better yet find a buddy that works for the power company who'll let you dump your oil into his waste oil container... they have ways of dealing with it... you don't. replace the oil with non-PCB mineral oil, then consider keeping the damned thing outside... or better yet in the neighbors yard :)

I don't think it's worth it.

I am looking for the following equiptment; a Heathkit IG-72 or IG-18
audio generator. A Heathkit IT-12 signal tracer. Thank you Peter VE6LP.

2462. FS: Pocketscope

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-27 00:00:00 UTC
From: petef@sprynet.com
Message-ID: <333a9ebe.2799445@news.interserv.com>
Source record: 121659

The Model S-10A Pocketscope is a small, compact, lightweight instrument for the observation of repetitive electrical circuit phenomena. The Pocketscope is a complete cathode ray oscilloscope incorporating the cathode ray tube, vertical and horizontal amplifiers, linear time base oscillator, synchronization means and self contained power supply.

So begins the advertising flyer. The scope weighs only 5.75 pounds. Amplifier response within -6db from 20 to 200 KC, time base to 50 KC. This is the scope with the controls on the top and the telescoping light shield. 63/8" X 4 " X 10" HWD

Its appearance is excellent and it works ok, although the 2AP1 scope tube needs to be replaced: it's a common tube and Fair Radio has them for $15.00

Complete with manual and ad flyer, $40 plus shipping from Nashua NH 03060, UPS or your choice.

Remember: "The vacuum tubes used are the famous miniature glass tubes that have proved to be superior in many respects to regular metal or glass tubes" -from the ad.

For a brief description, take a look on
http://telalink.net/~badger/millist/index.html.
Hunt up BC-645 on the list and click on it.

It is what's called an IFF set (for: Identify [or Identification] Friend or Foe). Many were made during WW2 for US and Allies to install in aircraft. They were sold really cheap-cheap on the surplus market after the war. Mine is a 'brand new' unit.

[Yeah Tom, I'm bragging your website up again :-)]

Okay, gang, don't kid me too much on this one........

This is a vintage, tube-type CB radio from the late 1960s. Its in very nice condition, complete and unmodified. It will clean up to an 8 or 9 on a scale of 10.

I know there are folks who are interested in vintage CB boatanchor radios and here is a classic example. Since I will probably never do anything with it I'll sell it for $100.00 plus UPS.

If interested please reply by e-mail.

73,

Another project I'll never get around to doing.....

I've had this radio for several years. It is cosmetically very good. It needs some TLC. The front panel is perfect -all original knobs, except the bandpass knob has had a non-original setscrew replacing the original one. The cabinet is okay but should be repainted satin black. Electrically the unit has had a modification - Tim, WA1HLR has modified it to operate on 160 meters - a crystal in an FT-243 holder was soldered in the deck and additional inductance added. Anyone who has a radio modified by Tim will attest to the fact that it is a special radio indeed.

I will sell this radio for $100.00 plus UPS. If interested please reply by e-mail.

A historical note on this equipment: After we had built thousands of these, the Army decided it was too risky to use them - the bad guys could fake a "friendly" signal too easily. We never used any of them. I remember reading this in one of the early articles on using them in one of the ham magazines.

I had one of them - it had a magnesium "self-destruct" flare in it so it could commit suicide. I wonder if those floating around today still have those flares inside????

Lots of guys made their first crude transmissions on the 70 cm band with these. They made a usable RF source for playing around with antenna design measurements there.
